discipline itself Nursing and nurses have rapidly recognized that health related research problems often require a multi faceted approach that can be realized most effectively through multi disciplinary activities Not unexpectedly however individual researchers have frequently remained entrenched in the particular methodologies with which they are familiar and have only reluctantly and perhaps wisely ventured beyond these In contrast the aim of this book has been to gather together material that reflects the diversity and richness of research in nursing To juxtapose different designs springing from different epistemologies with the aim of stimulating a more holistic approach It hopes to provide readers with an understanding of nursing research through a consideration of the issues involved *Nursing Research and Statistics* Suresh
