Nurturing Children A History Of Pediatrics:

Nurturing Children A. R. Colón, P. A. Colón, 1999-12-30 This history of the evolution of pediatrics from the beginning of recorded civilization examines chronologically the medical and societal antecedents of current child care Although the term pediatrics is modern the book explores the antecedents that facilitated the evolution of pediatric care as a separate discipline and a unique science These antecedents include ancient manuscripts and the writings of acknowledged medical classicists and the works of physicians in the East who recorded the medicine of the ancients their own original theories clinical observations and experience and exported their wisdom to the West The book's point of view demonstrates that healers from the beginning of recorded time understood the unique physiology of the infant and the distinct nutritional and medical needs of the growing child Despite this recognition centuries of poorly applied medical principles prevailed in the general population as adjuncts to societal conditions that included war pestilence ignorance of the pathophysiology of disease and the exploitation of labor In this milieu suffering was universal Pediatrics came into its own when richer more stable societies had the time energy and resources to provide for the most vulnerable of their subjects Motives included economic self interest as well as altruistic demand for social reform

A History of Children A. R. Colón, P. A. Handbook of Parenting Marc H. Bornstein, 2005-02-16 Despite the fact that most people become parents and everyone who has ever lived has had parents parenting remains a mystifying subject about which almost everyone has opinions but about which few people agree Striking permutations on the theme of parenting are emerging single parenthood blended families lesbian and gay parents and teen versus fifties first time moms and dads Divided into four volumes the Handbook of Parenting is concerned with different types of parents basic characteristics of parenting forces that shape parenting problems faced by parents and the practical sides of parenting Contributors have worked in different ways toward understanding all of these diverse aspects of parenting and look to the most recent research and thinking in the field to shed light on many topics every parent has wondered about Because development is too subtle dynamic and intricate to admit that parental caregiving alone determines the course and outcome of ontogeny volume 1 concerns how children influence parenting Volume 2 relates parenting to its biological roots and sets parenting in its ecological framework Volume 3 distinguishes among the cast of characters responsible for parenting and is revealing of the psychological make ups and social interests of those individuals Volume 4 describes problems of parenting as well as the promotion of positive parenting practices Written to be read and absorbed in a single sitting each chapter addresses a different but central topic in parenting and is rooted in current thinking and theory as well as classic and modern research on that topic All chapters follow a standard organization including an introduction to the chapter as a whole followed by historical considerations of the topic a discussion of central issues and theory a review of classic and modern research forecasts of future directions for theory and research and a conclusion In addition to considering their own convictions and research the chapter contributors present and broadly interpret all major points of view and central lines of inquiry

These important new essays show how changing patterns of health and disease have responded to and shaped notions of childhood and adolescence as life stages. Until the early 20th century life-threatening illnesses were a sinister presence in the lives of children of all social classes. Today many diseases and threats to child health have been eliminated or alleviated. Yet critical problems remain. New threats such as AIDS and violence take a steady toll. Child health remains an active concern for all families. Despite the development of health care policies, social welfare policies and effective medication, the home remains as it was in the Colonial period: the most critical site of care. Parents are still central to the preservation of children's health. This work imposes a holistic view of this experience for children and families. By examining the child's perspective of illness, the authors make an important contribution to the understanding of illness as part of the developmental process of growing up. *The History of Medicine and Healthcare* Lesley Bolton, William J. Pratt, Frank W. Stahnisch, 2021-03-24 This volume brings together such topics as the history of psychiatry, biomedical ethics in history, military medicine, children, women and changing gender roles in modern medicine, public health history and a special communication on the history of Canadian hospital workers. Of special note is a paper by internationally renowned historian Dr Peter L. Twohig, Canadian Research Chair in the History of the Atlantic World at Saint Mary's University in Halifax, Nova Scotia. It is well illustrated with images and diagrams pertaining to the history of medicine. *Infrahumanisms* Megan H. Glick, 2018-10-18 In *Infrahumanisms* Megan H. Glick considers how conversations surrounding nonhuman life have impacted a broad range of attitudes toward forms of human difference such as race, sexuality and health. She examines the history of human and nonhuman subjectivity as told through twentieth-century scientific and cultural discourses that include pediatrics, primatology, eugenics, exobiology and obesity research. Outlining how the category of the human is continuously redefined in relation to the infrahuman, a liminal position of speciation existing between the human and the nonhuman, Glick reads a number of phenomena from early twentieth-century efforts to define children and higher-order primates as liminally human and the postwar cultural fascination with extraterrestrial life to anxieties over AIDS, SARS and other cross-species diseases. In these cases the efforts to define a universal humanity create the means with which to reinforce notions of human difference and maintain human/nonhuman hierarchies. In foregrounding

how evolving definitions of the human reflect shifting attitudes about social inequality Glick shows how the consideration of nonhuman subjectivities demands a rethinking of long held truths about biological meaning and difference The Sick Child in Early Modern England, 1580-1720 Hannah Newton,2012-04-19 The Sick Child in Early Modern England is a powerful exploration of the treatment perception and experience of illness in childhood from the late sixteenth to the early eighteenth century At this time the sickness or death of a child was a common occurrence over a quarter of young people died before the age of fifteen and yet this subject has received little scholarly attention Hannah Newton takes three perspectives first she investigates medical understandings and treatments of children She argues that a concept of children s physic existed amongst doctors and laypeople the young were thought to be physiologically distinct and in need of special medicines Secondly she examines the family s experience demonstrating that parents devoted considerable time and effort to the care of their sick offspring and experienced feelings of devastating grief upon their illnesses and deaths Thirdly she takes the strikingly original viewpoint of sick children themselves offering rare and intimate insights into the emotional spiritual physical and social dimensions of sickness pain and death Newton asserts that children s experiences were characterised by profound ambivalence whilst young patients were often tormented by feelings of guilt fears of hell and physical pain sickness could also be emotionally and spiritually uplifting and invited much attention and love from parents Drawing on a wide array of printed and archival sources The Sick Child is of vital interest to scholars working in the interconnected fields of the history of medicine childhood parenthood bodies emotion pain death religion and gender Engineering Society Kerstin Brückweh,Richard F.
