Mercer, 2012-12-06 This book is a compilation of presentations at the first meeting devoted to the molecular and cellular biology of copper transport When we first considered the possible program for the meeting we felt that a forum to integrate the recent advances in molecular understanding of copper transport with the older knowledge of copper metabolism was needed In addition we wished to have a strong emphasis on the diseases of copper including the genetic diseases Menkes and Wilson and other possible health aspects of this metal seen from a molecular perspective Overall we were very happy with the success of the meeting and most participants were very enthusiastic Unfortunately we were not able to obtain manuscripts from every contributor but the selection in this book covers most of the topics discussed The history of biological research into copper dates from the latter half of the last century when the presence of copper as a component of living systems was first noted but it was not until the 1920s that the essential role of copper was first recognized I S McHargue found that plants and animals needed copper for optimal growth and health and proposed that copper was needed for life McHargue 1925 Other

groups soon confirmed these observations in plants In animals the requirement of copper for hematopoiesis was discovered in 1928 Hart et al **Current Catalog** National Library of Medicine (U.S.),1993 **Breastfeeding** Patricia

Stuart-Macadam,2017-09-29 Breastfeeding is a biocultural phenomenon not only is it a biological process but it is also a culturally determined behavior As such it has important implications for understanding the past present and future condition of our species In general scholars have emphasized either the biological or the cultural aspects of breastfeeding but not both As biological anthropologists the editors of this volume feel that an evolutionary approach combining both aspects is essential One of the goals of their book is to incorporate data from diverse fields to present a more holistic view of breastfeeding through the inclusion of research from a number of different disciplines including biological and social cultural anthropology nutrition and medicine The resulting book presenting the complexity of the issues surrounding very basic decisions about infant nutrition will fill a void in the existing literature on breastfeeding **Dietary Reference Intakes for**
