Nutritional Cognitive Neuroscience Research at the Crossroads of Nutrition, Psychology, and Neuroscience Aron K. Barbey,Elizabeth J. Johnson,Margaret Joy Dauncey,2019-01-23 Nutritional Cognitive Neuroscience is an emerging interdisciplinary field of research that seeks to understand nutrition s impact on human cognition and brain health across the life span Research in this burgeoning field demonstrates that many aspects of nutrition from entire diets to specific nutrients affect brain structure and function and therefore have profound implications for understanding the nature of psychological health aging and disease The aim of this Research Topic in Frontiers in Aging Neuroscience is to examine recent empirical and theoretical contributions from Nutritional Cognitive Neuroscience with an emphasis on the following primary areas of inquiry Nutrition and Brain Health An enduring aim of research in the nutritional sciences is to discover specific nutrients and dietary patterns that enhance cognitive function and brain health in the elderly Although an abundance of evidence supports a single or a few nutrients for the promotion of cognitive performance and brain health clinical trials using nutritional supplementation have been predominately unsuccessful Further research is therefore needed to better characterize the contributions of specific nutrients and nutrient combinations to cognitive performance and brain health Moderators of Nutrition s Impact on the Brain A second major area of research in Nutritional Cognitive

Neuroscience investigates the mechanisms that underlie the effects of nutrition on brain health at the cellular molecular and circuit levels Accumulating evidence indicates that the effects of nutrition on brain health are complex and multifactorial reflecting the influence of particular nutrient combinations on specific brain networks and taking into account several moderating factors Considerably more research is needed to elucidate the complex interactions between nutrition and known moderating variables including age nutritional status genes environment and lifestyle in determining nutrition s impact on cognitive function and brain health Personalized Nutrition Research at the frontiers of Nutritional Cognitive Neuroscience establishes a personalized approach to nutritional intervention that takes into account individual variability in nutritional status brain health genes environment and lifestyle The goal of personalized nutrition is to enhance the precision of nutritional intervention and to enable novel applications to psychological health aging and disease

Nutritional influences on human neurocognitive functioning Michael Smith,Andrew Scholey,2014-11-04 You are what you eat It s a saying that we ve all heard time and time again The notion that good nutrition is essential for adequate growth and sound physical wellbeing is very well established Further in recent years there has been an overwhelming increase in research dedicated to better understanding how nutritional factors influence cognition and behaviour For example several studies have suggested that higher foetal exposure to omega 3 fatty acids and B vitamins such as folate promotes neurodevelopment B vitamins may also play a role in neurocognitive functioning in later life with some suggestion that lower vitamin B levels are associated with increased risk of dementia although randomised controlled trials investigating B vitamin supplementation as a cognitive enhancer in the elderly have provided inconclusive evidence as to the benefits of such therapy for dementia In fact the nutritional underpinnings of Alzheimer s disease and other disorders of cognitive ageing is becoming a much researched topic In addition consumption of several other foods has been found to convey more acute cognitively enhancing effects For example ingestion of carbohydrates e g glucose caffeine resveratrol and several nutraceutical herbal extracts has been associated with short term improvements in cognitive performance Beyond specific micronutrients and macronutrients the current literature seems to support anecdotal evidence that consumption of a balanced breakfast is crucial to various measures of school performance including attention in the classroom What is clear from this emerging literature is that the relationship between nutritional status and neurocognitive functioning at various stages of the lifespan is complex An aim of this Research Topic is to bring together some recent empirical findings reviews and commentaries of the literature to date and opinion pieces relating to future directions for this burgeoning field

The book delves into Nutritional Neuroscience. Nutritional Neuroscience is an essential topic that must be grasped by everyone, ranging from students and scholars to the general public.
