Peenemunde Wind Tunnels A Memoir:

The Peenemünde Wind Tunnels Peter P. Wegener, 1996-01-01 In 1943 on orders from the German Air Ministry young physicist Peter P Wegener left the Russian front and reported to the Baltic village of Peenemünde His assignment was to work at the supersonic wind tunnels of the rocket laboratories of the German Army Here Wernher von Braun led a team that developed the V 2 the world's first large rocket powered guided missile and laid much of the groundwork for postwar rocket development In this fascinating book Wegener recounts his experiences during Hitler's time World War II and his years at Peenemünde He tells how he was working one night in August 1943 when the Allies bombed the laboratories but left the wind tunnels undamaged The tunnels were moved to Bavaria and Wegener was ordered to follow in 1944 After the war the tunnels were moved again this time to the United States accompanied by the author and other German scientists Shortly before the end of the war Wegener visited Germany's underground V 2 production plant to retrieve archival material on aerodynamics that had been stored in caves for safekeeping He describes the appalling history of the concentration camps where SS guards watched over inmates who toiled underground in inhuman conditions and often did not survive A photoessay enhances this remarkable memoir

Political Science: Reflecting on Concepts, Demystifying Legends Rainer Eisfeld, 2016-04-04 Rainer Eisfeld's book highlights the merits of socio historical research into topics infrequently covered by mainstream political science Directing attention to the need for carefully scrutinizing the convenient truths of established post Nazi post Communist political narratives its chapters encourage reflection of the discipline's history and state of the art A companion volume to the 2012 book entitled *Radical Approaches to Political Science Roads Less Traveled* also published by Barbara Budrich this collection is likewise based on an approach to political science informed by a theory of participatory pluralism and grounded in history The chapters focus on the discipline's fragmentation and its retreat from public debate on the varying roles of political science and international relations as champions of more or less democracy on normative and analytical concepts developed by Hannah Arendt Klaus von Beyme and Robert A Dahl on the deconstruction of the Peenemünde Legend about the unspoiled rule of science at the Third Reich's missile development center on reasons for the Peenemünde engineers' actual complicity in the exploitation of concentration camp labor to mass produce their V 2 missile Rainer Eisfeld's leadership in the fields of pluralism and analysis of the discipline in the International Political Science Association means that he has quite a background to share with us in this his most recent collection of essays John Trent

History of Shock Waves, Explosions and Impact Peter O. K. Krehl, 2008-09-24 This unique and encyclopedic reference work describes the evolution of the physics of modern shock wave and detonation from the earlier and classical percussion The history of this complex process is first reviewed in a general survey Subsequently the subject is treated in more detail and the book is richly illustrated in the form of a picture gallery This book is ideal for everyone professionally interested in shock wave phenomena

The Origins of Surface-to-Air Guided Missile Technology James Mills, 2024-01-05 Author James Mills presents an amazing

detailed history review of the German surface to air guided missile technology development Military Review World War II saw the appearance of numerous revolutionary armaments on both sides of the conflict that would radically change the nature of warfare from jet aircraft to the ballistic missile and the atomic bomb The greatest conflagration in history also saw the conception of the first surface to air guided missile systems technology pioneered by German scientists and engineers through an extensive development program which ran from 1942 to 1945 Although the program did not achieve its main objective to introduce a functional weapon system into the Luftwaffe air defense network German research and development in most aspects of the technology was ahead of comparable research in the United Kingdom and the United States The history of the transfer of German SAM technology to the Allies after 1945 has previously been overshadowed by the well published transfers of the V 1 and V 2 guided missiles This book presents the first complete history of Germany s wartime development of surface to air missile SAM technology how the Allies acquired this secret research towards the end of World War II in Europe and in the early postwar period and how they then exploited this knowledge

A History of the Atomic Space Age and Its Implications for the Future Willis L. Shirk, 2018-02-12 The Atomic Space Age has been and continues to be an engine for future wealth creation Humanity stands on the verge of becoming an interplanetary species We know we are made of star stuff precisely because many of the isotopes in our bodies originated in the death throes of dying suns With the discovery of nuclear fission in 1938 mankind was for the first time able to glimpse both our distant past and our possible future As with the discovery of fire and agriculture thousands of years ago wind power hundreds of years ago and steam power and electricity in the nineteenth century we must now learn to tame this powerful new force locked within the heart of the atom Buckminster Fuller once observed that wealth is nothing more than energy compounded by ingenuity Since mass energy can never decrease and ingenuity will only

increase there is no limit to the quantity of wealth that our species can and will create using nuclear space propulsion

Our Germans Brian E. Crim, 2018-01-15 As this engaging book demonstrates whether characterized as an expedient Cold War program born from military necessity or a dishonorable episode the project ultimately reflects American ambivalence about the military industrial complex and the viability of an ends justifies the means solution to external threats

Von Braun Michael Neufeld, 2017-04-12 Curator and space historian at the Smithsonian's National Air and Space Museum delivers a brilliantly nuanced biography of controversial space pioneer Wernher von Braun Chief rocket engineer of the Third Reich and one of the fathers of the U S space program Wernher von Braun is a source of consistent fascination Glorified as a visionary and vilified as a war criminal he was a man of profound moral complexities whose intelligence and charisma were coupled with an enormous and some would say blinding ambition Based on new sources Neufeld's biography delivers a meticulously researched and authoritative portrait of the creator of the V 2 rocket and his times detailing how he was a man caught between morality and progress between his dreams of the heavens and the earthbound realities of his life

Dark Side of the Moon Wayne Biddle, 2020-04-07 A stunning investigation of the roots of the first moon landing forty years ago This illuminating story of the dawn of the space age reaches back to the reactionary modernism of the Third Reich using the life of rocket scientist Wernher von Braun as its narrative path through the crumbling of Weimar Germany and the rise of the Nazi regime Von Braun a blinkered opportunist who could apply only tunnel vision to his meteoric career stands as an archetype of myriad twentieth century technologists who thrived under regimes of military secrecy and unlimited money His seamless transformation from developer of the deadly V 2 ballistic missile for Hitler to an American celebrity as the supposed genius behind the golden years of the U S space program in the 1950s and 1960s raises haunting questions about the culture of the Cold War the shared values of technology in totalitarian and democratic societies and the imperatives of material progress

12 Seconds of Silence Jamie Holmes, 2020 The riveting story of the American scientists tinkers and nerds who solved one of the biggest puzzles of World War II and developed one of the most powerful weapons of the war 12 Seconds of Silence is the remarkable lost story of how a rag tag group of American scientists overcame one of the toughest problems of World War II Shooting things out of the sky Working in a secretive organization known as Section T a team of physicists engineers and everyday Joes and Janes created one of the world's first smart weapons the proximity fuse The tiny gadget allowed an artillery shell to know when to explode to bring down an aircraft Against overwhelming odds and in a race against time mustering every scrap of resource ingenuity and insight the scientists of Section T would eventually save countless lives rescue the city of London from the onslaught of a Nazi superweapon and help bring about the Axis defeat A holy grail sought after by Allied and Axis powers alike the fuse ranks with the atomic bomb as one of the most revolutionary technologies of the Second World War Until now its tale was largely untold For fans of Erik Larson and Ben Macintyre set amidst the fog of espionage dueling spies and the dawn of an age when science would determine the fate of the world 12

Seconds of Silence is a tribute to the extraordinary wartime mobilization of American science and the ultimate can do story

Operation Paperclip Annie Jacobsen, 2014-02-11 The remarkable story of America's secret post WWII science programs The Boston Globe from the New York Times bestselling author of Area 51 In the chaos following World War II the U S government faced many difficult decisions including what to do with the Third Reich's scientific minds These were the brains behind the Nazis once indomitable war machine So began Operation Paperclip a decades long covert project to bring Hitler's scientists and their families to the United States Many of these men were accused of war crimes and others had stood trial at Nuremberg one was convicted of mass murder and slavery They were also directly responsible for major advances in rocketry medical treatments and the U S space program Was Operation Paperclip a moral outrage or did it help America win the Cold War Drawing on exclusive interviews with dozens of Paperclip family members colleagues and interrogators and with access to German archival documents including previously unseen papers made available by direct descendants of the Third Reich's ranking members files obtained through the Freedom of Information Act and dossiers discovered in government archives and at Harvard University Annie Jacobsen follows more than a dozen German scientists through their postwar lives and into a startling complex nefarious and jealously guarded government secret of the twentieth century In this definitive controversial look at one of America's most strategic and disturbing government programs Jacobsen shows just how dark government can get in the name of national security Harrowing How Dr Strangelove came to America and thrived told in graphic detail Kirkus Reviews

Hitler's Scientists John Cornwell, 2004-09-28 An eye opening account of the rise of science in Germany through to Hitler's regime and the frightening Nazi experiments that occurred during the Reich A shocking account of Nazi science and a compelling look at the dramatic rise of German science in the nineteenth century its preeminence in the early twentieth and the frightening developments that led to its collapse in 1945 this is the compelling story of German scientists under Hitler's regime Weaving the history of science and technology with the fortunes of war and the stories of men and women whose discoveries brought both benefits and destruction to the world Hitler's Scientists raises questions that are still urgent today As science becomes embroiled in new generations of weapons of mass destruction and the war against terrorism as advances in biotechnology outstrip traditional ethics this powerful account of Nazi science forms a crucial commentary on the ethical role of science

Throwing Fire Alfred W. Crosby, 2002-04-08 Historian Alfred W. Crosby looks at hard accurate throwing and the manipulation of fire as unique human capabilities Humans began throwing rocks in prehistory and then progressed to javelins atlatls bows and arrows We learned to make fire by friction and used it to cook drive game burn out rivals and alter landscapes In historic times we invented catapults trebuchets and such flammable liquids as Greek Fire About 1 000 years ago we invented gunpowder which accelerated the rise of empires and the advance of European imperialism In the 20th century gunpowder weaponry enabled us to wage the most destructive wars of all time peaking at the end of World War II with the V 2 and atomic bomb Today we have turned our projectile talents to space travel

which may make it possible for our species to migrate to other bodies of our solar system and even other star systems

The Complete Book of Spaceflight David Darling, 2008-04-21 A commanding encyclopedia of the history and principles of spaceflight from earliest conceptions to faster than light galaxy hopping Here is the first truly comprehensive guide to space exploration and propulsion from the first musings of the Greeks to current scientific speculation about interstellar travel using warp drives and wormholes Space buffs will delight in its in depth coverage of all key manned and unmanned missions and space vehicles past present and projected and its clear explanations of the technologies involved Over the course of more than 2 000 extensively cross referenced entries astronomer David Darling also provides fascinating insights into the cultural development of spaceflight In vivid accounts of the major characters and historical events involved he provides fascinating tales of early innovators the cross pollination that has long existed between science fiction and science fact and the sometimes obscure links between geopolitics warfare and advances in rocketry Scientific Research In World War II Ad Maas, Hans Hooijmaijers, 2009-01-13 This book seeks to explore how scientists across a number of countries managed to cope with the challenging circumstances created by World War II No scientist remained unaffected by the outbreak of WWII As the book shows there were basically two opposite ways in which the war encroached on the life of a scientific researcher In some cases the outbreak of the war led to engagement in research in support of a war waging country in the other extreme it resulted in their marginalisation The book starting with the most marginalised scientist and ending with those fully engaged in the war effort covers the whole spectrum of enormously varying scientific fates Distinctive features of the volume include a focus on the experiences of ordinary scientists rather than on figureheads like Oppenheimer or Otto Hahn contributions from a range of renowned academics including Mark Walker an authority in the field of science in World War II a detailed study of the Netherlands during the German Occupation This richly illustrated volume will be of major interest to researchers of the history of science World War II and Modern History *Old Lessons New Thoughts... ,*
