Maritime Strategy for Medium Powers Rear Admiral J.R. Hill, 2021-05-30 This book first published in 1986 argues that there is a special category of medium powers in the world such as Britain France India Brazil Japan China and others which have sufficient military power to do something to protect their interests but which are not a match for the superpowers It surveys the whole range of naval warfare equipment operations organisation and deployment and discusses how each item should be tailored by the recognition of the position of the medium power It considers alliances a key element for medium powers and explores how these should be handled and what use they may be expected to fulfil The book argues that the concept of medium power here developed thoroughly for the first time will be extremely useful to many countries in defining their strategic role in a purposeful way

Possible Wars? Sam J. Tangredi, 2000 This survey is a product of the Quadrennial Defense Review QDR 2001 Working Group a project of the Institute for National Strategic Studies at the National Defense University Sponsored by the Chairman of the Joint Chiefs of Staff the working group is an independent honest broker effort intended to build intellectual capital for the upcoming QDR More specifically it aims to frame issues develop options and provide insights for the Chairman the services and the next administration in three areas defense strategy criteria for sizing conventional forces and force structure for 2005 2010 One of the group's initial tasks was to assess the future security environment to the year 2025 This was pursued by surveying the available literature to identify areas of consensus and debate The goal was to conduct an assessment that would be far more comprehensive than any single research project or group effort could possibly produce This survey documents major areas of agreement and disagreement across a range of studies completed since the last QDR in 1997 Because it distills a variety of sources and organizes and compares divergent views this volume makes a unique contribution to the literature It also provides a particularly strong set of insights and assumptions on which both strategists and force planners can draw in the next Quadrennial Defense Review This survey does not claim to predict or illustrate all possible wars that America might face between now and the year 2025 Rather it attempts through analysis of representative and reputable sources to incorporate the most likely characteristics of the future security environment into a single scenario while heightening our awareness of dissenting viewpoints and plausible wild cards

The Dynamics of Coalition Naval Warfare Steven Paget, 2017-09-22 This book examines the dynamics of coalition naval operations Since the end of the Second World War few nations possess the capacity for large scale sustained and independent naval operations and even those that do such as the USA often find it economically militarily and politically expedient to act multilaterally As such coalition naval operations increasingly became the norm throughout the twentieth century and there is little sign of this abating in the twenty first Multinational operations provide a number of benefits but they also present a number of challenges Examining the dynamics of coalition operations involving the Royal Navy RN Royal Australian Navy RAN and the United States Navy USN during the Korean War Vietnam War and the Iraq War this book provides a broad overview of naval interoperability between the three navies Using the naval gunfire support NGS capability as a lens through which to analyse operations the study explores a diverse range of issues including command and control communications equipment standardisation intelligence logistics planning rules of engagement tactics techniques and procedures and training Approaching the subject through both historical and contemporary perspectives not only provides a unique assessment of the variation in the effectiveness of interoperability over time but also offers a platform for better understanding and enhancing the performance of future coalition naval operations Based on extensive archival research in Australia the UK and the US as well as wide ranging interviews this book sheds new light on the dynamics of conducting coalition operations This book will be of great interest to students of naval history strategic studies sea power maritime security military studies and IR in general The

Future of Sea Power Eric Grove, 2021-05-30 This book first published in 1990 presents a fundamental reassessment of maritime strategy It analyses the lessons of twentieth century naval warfare and examines in detail the changing face of naval warfare both in terms of the weapons used and the platforms from which they are launched and controlled It looks at the evolving uses of the seas both economic and military and sets sea power against the developing world environment political legal and economic discussing those factors that stimulate nations to exert power at sea and those that limit their naval capabilities It also develops a theoretical framework for future thinking about maritime strategy and forces revises and updates Mahan's classical analysis of the foundations of sea power and discusses thinking about naval tasks

Arms Control At Sea J Richard Hill, 2024-04-01 Originally published in 1989 this book reviews the history of maritime control measures from before the First World War and provides a critical examination of both the objectives of maritime power and the concepts of disarmament peace zones parity verifiability and peaceful co existence It argues that the objectives of maritime power are not necessarily incompatible with international security and that strategic deterrence can contribute to improved security Limitation measures it is argued can in some cases be double edged endangering other security fields and having a destabilizing effect The book stresses the need for non absolute solutions in order to achieve a reasonable level of security and makes proposals for both structural and confidence building measures along those lines

Chapsos, C. Kitchen, 2015-07-30 Seventy percent of our planet is covered by water and even in today's world of instant communication the global community is still heavily reliant on sea based transport The maritime domain has always been one of NATO's key strengths but concerns about maritime security have taken on renewed importance in recent years and NATO has been forced to re-examine some of its fundamental assumptions about the post Cold War security environment This book shares some of the research debates and findings from a NATO Advanced Research Workshop ARW Building Trust to Enhance Maritime Security held in Geneva Switzerland in November 2014 The chapters in the book deal extensively with lessons learned by NATO from a wide range of policies operations and situations This maritime experience has been amassed from the Atlantic and Mediterranean to the Baltic and the Black Sea and even into the Indian Ocean as well as from the four decades spent defending NATO allies on the

high seas during the Cold War The single most profound lesson learned over the years has concerned the importance of efficient coordination Structures and mechanisms have been created not least in recent counter piracy operations which enable a vast array of actors to work together in an efficient way and which could prove invaluable in future efforts to counter terrorism and aggression worldwide The safety of the maritime domain is essential to the freedom and security of all nations and this book will be of interest to all those whose work involves maintaining that freedom and security
