Nobel Universal Graphical Language Milan Randic, 2010-05-24 Nobel is a pictographic language based on some 120 basic signs and many arrows of different shape that are mutually combined It is named after Alfred Nobel 1833-1896 Swedish chemist and industrialist inventor of dynamite who left most of his fortune to a foundation that annually gives awards to individuals whose work is characterized as greatest benefit to mankind known as Nobel Prizes Besides the awards for sciences and literature significantly Alfred Nobel included among others a prize for peace that besides individuals also organizations may obtain Although it would be utopian to believe that human conflicts could be avoided if communication tools would improve the emergence of universal languages certainly cannot make the situation worse Universal languages are a communication tool which makes it possible for people of no common language to communicate They are graphic but they should be distinguished from picture writings which only passively offer information on some event or give messages Universal languages have more similarity with the sign languages that are used for people who lost hearing or the sign language of American Plains Indians who spoke different languages and could communicate by sign language that they developed However written language has some advantages over hand sign languages in that one can communicate at a great distance particularly today in the age of fax and computer communications and that one can leave messages for posterity This is not the place to argue for or against the promise of written sign languages Graphic written sign languages exist today and the best known are Chinese characters used in China and Japan The problem with Chinese characters is that there are too many characters and it is difficult to learn so many It takes years for children in China and Japan to learn so many different characters and the task would be even harder for grown people to learn if they have not done this when young Nobel is designed to remove this difficulty and is based on the following requirements 1 SMALL NUMBER OF BASIC SIGNS 2 SIGNS SHOULD BE EASY TO RECOGNIZE 3 SIGNS SHOULD BE EASY TO REPRODUCE 4 COMBINATIONS LIMITED TO THREE SIGNS 5 COMPLEMENTARY We have already mentioned that Nobel uses about 120 basic signs which can be viewed as a small number particularly in view of over 100 signs of Nobel that are so obvious that they can be easily absorbed The other requirements are also very important There are many signs that can be easily recognized but in order to be acceptable for Nobel they also need to be easily reproduced because that will facilitate communication Also when making combinations

of signs one has to make some restriction in order to maintain clarity so we decided to have no more than three signs combined into single word Finally the last requirement that of complementarities needs some explanation Besides having signs that one can easily recognize and easily draw one needs some structure to be embedded into composition of signs that facilitates one to remember and learn signs easily We refer to this structure as complementary or broadly speaking associational and what it implies is that words and objects that are related should have related signs Thus for example pairs of words like man woman cat dog coffee tea good bad love hate etc should have signs that are in some opposition while words like smoke flame fire tree wood forest water sea ocean good better best should have signs that are in competition With this in mind when one sees and learns the basic signs the meaning of many combinations of signs can be in advance anticipated This helps one to learn Nobel rather fast not months not weeks perhaps not even days but a couple of hours may suffice that one may learn hundreds and hundreds of words In this respect Nobel may be unique among languages written spoken of

The Stairway to Consciousness Dr. Thomas Stark, Come and discover the extraordinary story of how consciousness is born from the unconscious This is the story of existence This is the story of the meaning of life the universe and everything Everything conscious has the unconscious for a mother To exist is to live to have a mind and to think As we see in our dreams thinking can produce outer worlds which we imagine are external to us but are just our own constructs We are all part of a living cosmic organism seeking to optimize itself to perfect

itself The Cosmic Mind produces a Cosmic World in which Mind can contend with its own construct and come to consciousness via all the problems and struggles it encounters there We are alienated from the world because we fail to understand that we unconsciously created it Only consciousness can reveal the truth that everything is made by us that we have total control over it if we put our mind to it Minds and their thoughts are all that exist There is nothing else

Language as a Scientific Tool Miles MacLeod,Rocío G. Sumillera,Jan Surman,Ekaterina Smirnova,2016-01-29 Language is the most essential medium of scientific activity Many historians sociologists and science studies scholars have investigated scientific language for this reason but only few have examined those cases where language itself has become an object of scientific discussion Over the centuries scientists have sought to control refine and engineer language for various epistemological communicative and nationalistic purposes This book seeks to explore cases in the history of science in which questions or concerns with language have bubbled to the surface in scientific discourse This opens a window into the particular ways in which scientists have conceived of and construed language as the central medium of their activity across different cultural contexts and places and the clashes and tensions that have manifested their many attempts to engineer it to both preserve and enrich its function The subject of language draws out many topics that have mostly been neglected in the history of science such as the connection between the emergence of national languages and the development of science within national settings and allows us to connect together historical episodes from many understudied cultural and linguistic venues such as Eastern European and medieval Hebrew science

Grammar Wars Linda Mitchell,2017-09-20 This title was first published in 2001 Although 17th and 18th century English language theorists claimed to be correcting errors in grammar and preserving the language from corruption this new study demonstrates how grammar served as an important cultural battlefield where social issues were contested Author Linda C Mitchell situates early modern linguistic discussions long thought to be of little interest in their larger cultural and social setting to show the startling degree to which grammar affected and was affected by such factors as class and gender In her examination of the controversies that surrounded the teaching and study of grammar in this period Mitchell looks especially at changing definitions and standardization of grammar how and to whom it was taught and how grammar marked the social position of marginal groups Her comprehensive study of the contexts in which grammar was intended or thought to function is based on her analysis of the ancillary materials prefaces introductions forewords statements of intent organization of materials surrounding materials and manifestos of pedagogy philosophy and social or political goals of more than 300 grammar texts of the time The book is intended as a landmark study of an important movement in the foundation of the modern world

The primary synopsis of universology and Alwato ... the new scientific universal language Stephen Pearl Andrews,1871

The Brain from 25,000 Feet Mark A. Changizi,2013-06-29 In The Brain from 25 000 Feet Mark A Changizi defends a non reductionist philosophy and applies it to a variety of problems in the brain sciences Some of the key questions answered are as follows Why do we

see visual illusions and why are illusions inevitable for any finite speed vision machine Why aren't brains universal learning machines and what does the riddle of induction and its solution have to do with human learning and innateness The author tackles such questions as why the brain is folded and why animals have as many limbs as they do explaining how these relate to principles of network optimality He describes how most natural language words are vague and then goes on to explain the connection to the ultimate computational limits on machines There is also a fascinating discussion of how animals accommodate greater behavioral complexity This book is a must read for researchers interested in taking a high level non mechanistic approach to answering age old fundamental questions in the brain sciences
