Numerical Methods of Approximation Theory, Vol.6 \ Numerische Methoden der Approximationstheorie, Band 6

Collatz, Meinardus, Werner, 2012-12-06 Der Band enthält Manuskripte zu Vorträgen die auf einer von den Herausgebern geleiteten Tagung über Numerische Methoden der Approximationstheorie am Mathematischen Forschungsinstitut Oberwolfach in der Zeit vom 18. 24. Januar 1981 gehalten wurden. Das Spektrum der Vorträge reichte von der klassischen Approximationstheorie über mehrdimensionale Approximationsverfahren bis hin zu praxisbezogenen Fragestellungen. Zu den zuerst genannten Gebieten gehörten z. B. die Verfeinerung von Fehlerabschätzungen bei der Polynominterpolation, Fragen zur Eindeutigkeit, Charakterisierung optimaler Interpolationsprozesse und Algorithmen zur rationalen Interpolation. Bei den weiteren genannten Gebieten spiegeln zahlreiche Vorträge das steigende Interesse an der mehrdimensionalen Interpolation insbesondere mit verschiedenen Arten von Splines wider. Hier standen u. a. Probleme der Parameterschätzung in der Medizin und Flugtechnik, Fragen der Approximationstheorie bei der Konstruktion von Plottern und stabile Algorithmen beim Arbeiten mit mehrdimensionalen B-Splines im Mittelpunkt des Interesses. Die Tagung lieferte einen repräsentativen Überblick über die aktuellen Trends in der Approximationstheorie. Zum guten Erfolg der Tagung trug wie immer die hervorragende Betreuung durch die Mitarbeiter und Angestellten des Instituts so wie das verständnisvolle Entgegenkommen des Institutsdirektors Herrn Professor Dr. Barner bei. Unser besonderer Dank gilt dem Birkhäuser Verlag für die wie stets sehr gute Ausstattung. Helmut Werner, Lothar Collatz, Günther Meinardus, Hamburg, Mannheim, Bonn.

Meinardus, Collatz, Werner, 2013-11-11 Der vorliegende Band stellt Vortragsmanuskripte einer am Mathematischen Forschungsinstitut Oberwolfach in der Zeit vom 25. bis 31. Mai 1975 veranstalteten Tagung zusammen, die unter der Leitung der Unterzeichner stand. Die letzten dieser Tagungen über numerische Methoden der Approximationstheorie fanden 1971 und 1973 statt. Der Schwerpunkt lag bei Fragen der Numerik von Algorithmen zur Darstellung von Funktionen, ließen aber bereits ein wachsendes Interesse an Anwendungen erkennen. Die diesjährige Tagung war gekennzeichnet durch die Behandlung praktischer Aufgabenstellungen sowie durch die Einbeziehung der Anwendungen aus Nachbargebieten bzw. die Verwendung der Methoden dieser Gebiete in der Approximationstheorie. Insbesondere wurde auch auf die Beziehungen von Optimierung und Kontrolltheorie zu speziellen approximationstheoretischen Aufgaben eingegangen. Der starke Einfluss auf die numerischen Methoden zur Behandlung von Differentialgleichungen wurde etwa bei der Methode der finiten Elemente oder bei Kollokationsaufgaben deutlich. So ist zu hoffen, daß auch diese Tagung dazu beigetragen hat, Theorie und Anwendungen wieder stärker zu verbinden. Die spezifische

Atmosphäre des Forschungsinstituts stimulierte einen intensiven durch die breite internationale Streuung der Tagungsteilnehmer verstärkten fruchtbaren Gedankenaustausch. Zum Erfolg der Tagung trug wie immer die hervorragende Betreuung durch die Mitarbeiter und Angestellten des Forschungsinstituts und das verständnisvolle Entgegenkommen von Herrn Kollege Barner bei. Unser besonderer Dank gilt ferner dem Birkhäuser Verlag für die sehr gute Ausstattung des Buches.

ANSELONE, P. M., LEE, J. W.: Double Approximation Methods for the Solution of Fredholm Integral Equations. Numerische Methoden der Approximationstheorie Helmut Werner, 1972.

Das Mathematische Forschungsinstitut Oberwolfach veranstaltet seit längerer Zeit in etwa zweijährigem Turnus Tagungen über numerische Methoden der Approximationstheorie. Die Vortragsauszüge der diesjährigen Tagung, die vom 13. bis 19. Juni stattfand, sind in dem vorliegenden Band zusammengefasst. Die Themen lassen erkennen, dass es ein besonderes Anliegen der Tagungsleiter war, die Kluft zwischen abstrakter Mathematik und den Anwendungen verringern zu helfen.

Approximationstheoretische Fragestellungen scheinen geeignet zu sein, hier neue Brücken zu schlagen. Der starke Zustrom ausländischer Mathematiker insbesondere aus der Schweiz zeigt, dass diese Bestrebungen auch in anderen Ländern Resonanz finden. In zunehmendem Maße sind solche aus den natur- und innermathematischen Anwendungen herrührenden Fragestellungen zu behandeln, die sich nicht in klassische Approximationstheorie einordnen lassen. So wurde z. B. von Vertretern der Nachrichtentechnik über in ihrem Bereich auftretende ungewöhnliche Approximationsprobleme berichtet. Andere Vorträge beschäftigten sich mit Approximationsfragen, die aus gewissen Aufgaben der angewandten Mathematik erwachsen, z. B. Behandlung von Differential- und Integralgleichungen. Zwei weitere Schwerpunkte bildeten die Beziehungen zur Optimierungstheorie, die insbesondere zu effektiven numerischen Verfahren führen sowie Untersuchungen über Spline-Approximationen. Professor Steckin aus Moskau war leider an der Teilnahme verhindert und hat stattdessen das hier abgedruckte Manuskript übersandt.

Selections from papers presented at the Tagung über Numerische Methoden der Approximationstheorie. *Nonlinear Numerical Methods and Rational Approximation II* A. Cuyt, 2012-12-06.

These are the proceedings of the international conference on Nonlinear numerical methods and Rational approximation II organised by Annie Cuyt at the University of Antwerp, Belgium, 05-11 September 1993. It was held for the third time in Antwerp at the conference center of UIA after successful meetings in 1979 and 1987 and an almost yearly tradition since the early 70s. The following figures illustrate the growing number of participants and their geographical dissemination. In 1993 the Belgian scientific committee consisted of A. Bultheel (Leuven), A. Cuyt (Antwerp), J. Meinguet (Louvain-la-Neuve) and J. P. Thiran (Namur). The conference focused on the use of rational functions in different fields of Numerical Analysis. The invited speakers discussed Orthogonal polynomials, D. S. Lubinsky: Rational interpolation, M. Gutknecht: Rational approximation, E. B. Saff: Padé

approximation A Gonchar and Continued fractions W B Jones In contributed talks multivariate and multidimensional problems applications and implementations of each main topic were considered To each of the five main topics a separate conference day was devoted and a separate proceedings chapter compiled accordingly In this way the proceedings reflect the organisation of the talks at the conference Nonlinear numerical methods and rational approximation may be a narrow field for the outside world but it provides a vast playground for the chosen ones It can fascinate specialists from Moscow to South Africa from Boulder in Colorado and from sunny Florida to Zurich in Switzerland Zeitschrift für Angewandte Mathematik und Mechanik. Multivariate Approximation Theory SCHEMPP, ZELLER, 1979 **International Aerospace Abstracts**, 1975 **Vector Extrapolation Methods with Applications** Avram Sidi, 2017-09-26 An important problem that arises in different disciplines of science and engineering is that of computing limits of sequences of vectors of very large dimension Such sequences arise for example in the numerical solution of systems of linear and nonlinear equations by fixed point iterative methods and their limits are simply the required solutions to these systems The convergence of these sequences which is very slow in many cases can be accelerated successfully by using suitable vector extrapolation methods Vector Extrapolation Methods with Applications is the first book fully dedicated to the subject of vector extrapolation methods It is a self contained up to date and state of the art reference on the theory and practice of the most useful methods It covers all aspects of the subject including development of the methods their convergence study numerically stable algorithms for their implementation and their various applications It also provides complete proofs in most places As an interesting application the author shows how these methods give rise to rational approximation procedures for vector valued functions in the complex plane a subject of

importance in model reduction problems among others This book is intended for numerical analysts applied mathematicians and computational scientists and engineers in fields such as computational fluid dynamics structures and mechanical and electrical engineering to name a few Since it provides complete proofs in most places it can also serve as a textbook in courses on acceleration of convergence of iterative vector processes for example
