Mathematics of Oil Recovery Dominique Guerillot, D. Guérillot, Olivier Guillon, 1990-12 Mathematics in Industrial Problems Avner Friedman, 2012-12-06 This is the second volume in the series Mathematics in Industrial Problems The motivation for both volumes is to foster interaction between Industry and Mathematics at the grass roots that is at the level of specific problems These problems come from Industry they arise from models developed by the industrial scientists in venture directed at the manufacture of new or improved products At the same time these problems have the potential for mathematical challenge and novelty To identify such problems I have visited industries and had discussions with their scientists Some of the scientists have subsequently presented their problems in the IMA seminar on Industrial Problems The book is based on questions raised in the seminar and subsequent discussions Each chapter is devoted to one of the talks and is self contained The chapters usually provide references to the mathematical literature and a list of open problems which are of interest to the industrial scientists For some problems partial solution is indicated briefly The last chapter of the book contains a short description of solutions to some of the problems raised in the first volume as well as references to papers in which such solutions have been published The experience of the last two years demonstrates a growing fruitful interaction between Industry and Mathematics This interaction benefits Industry by increasing the mathematical knowledge and ideas brought to bear upon its concern and benefits Mathematics through the infusion of exciting new problems *Numerical Simulation in Oil Recovery* Mary Fanett Wheeler, 1988 The papers of this book are based on a Symposium on Numerical Simulation in Oil Recovery held at the Institute for Mathematics and its Applications The major research emphasis is on the modeling of fractures heterogeneities viscous fingering and diffusion dispersion effects in the flow in porous media This volume contains seventeen comprehensive papers on the latest developments in this exciting subject Its diverse presentation brings together the various disciplines of applied mathematics chemical engineering physics and hydrology **Flow Control** Max D. Gunzburger, 2012-12-06 The articles in this volume cover recent work in the area of flow control from the point of view of both engineers and mathematicians These writings are especially timely as they coincide with the emergence of the role of mathematics and systematic engineering analysis in flow control and optimization Recently this role has significantly expanded to the point where now sophisticated mathematical and computational tools are being increasingly applied to the control and optimization of fluid flows These articles document some important work that has gone on to influence the practical everyday design of flows moreover they represent the state of the art in the formulation analysis and computation of flow control problems This volume will be of interest to both applied mathematicians and to engineers *Computation and Applied Mathematics*, 2002 **Fluid Flow and Transport in Porous Media, Mathematical and Numerical Treatment** Zhangxin Chen, Richard E. Ewing, 2002 The June 2001 conference brought together mathematicians computational scientists and engineers working on the mathematical and numerical treatment of fluid flow and transport in

Resource Recovery, Confinement, and Remediation of Environmental Hazards John Chadam, Al Cunningham, Richard E. Ewing, Peter Ortoleva, Mary F. Wheeler, 2012-12-06 This IMA Volume in Mathematics and its Applications RESOURCE RECOVERY CONFINEMENT AND REMEDIATION OF ENVIRONMENTAL HAZARDS contains papers presented at two successful one week workshops Confinement and Remediation of Environmental Hazards held on January 15 19 2000 and Resource Recovery February 9 13 2000 Both workshops were integral parts of the IMA annual program on Mathematics in Reactive Flow and Transport Phenomena 1999 2000 We would like to thank John Chadam University of Pittsburgh Al Cunningham Montana State University Richard E Ewing Texas A M University Peter Ortoleva Indiana University and Mary Fanett Wheeler TICAM The University of Texas at Austin for their excellent work as organizers of the meetings and for editing the proceedings We take this opportunity to thank the National Science Foundation for their support of the IMA Series Editors Douglas N Arnold Director of the IMA Fadil Santosa Deputy Director of the IMA

PREFACE Advances in resource recovery and confinement remediation of environmental hazards requires a coordinated interdisciplinary effort involving mathematicians scientists and engineers The intent of this collection of papers is to summarize recent theoretical computational and experimental advances in the theory of phenomena in porous media with the intent to identify similarities and differences concerning applications related to both resource recovery and confinement

and remediation of environmental hazards *Mathematical Aspects of Scientific Software* J.R. Rice, 2012-12-06 Since scientific software is the fuel that drives today's computers to solve a vast range of problems huge efforts are being put into the development of new software systems and algorithms for scientific problem solving This book explores how scientific software impacts the structure of mathematics how it creates new subfields and how new classes of mathematical problems arise The focus is on five topics where the impact is currently being felt and where important new challenges exist namely the new subfield of parallel and geometric computations the emergence of symbolic computation systems into general use the potential emergence of new high level mathematical systems and the crucial question of how to measure the performance of mathematical problem solving tools *Statistical Thermodynamics and Differential Geometry of Microstructured*

Materials H.Ted Davis, Johannes C.C. Nitsche, 2012-12-06 Substances possessing heterogeneous microstructure on the nanometer and micron scales are scientifically fascinating and technologically useful Examples of such substances include liquid crystals microemulsions biological matter polymer mixtures and composites vycor glasses and zeolites In this volume an interdisciplinary group of researchers report their developments in this field Topics include statistical mechanical free energy theories which predict the appearance of various microstructures the topological and geometrical methods needed for a mathematical description of the subparts and dividing surfaces of heterogeneous materials and modern computer aided mathematical models and graphics for effective exposition of the salient features of microstructured materials

Computation and Applied Mathematics , 1992 Homogenization and Porous Media Ulrich Hornung, 2012-12-06 This book offers a systematic rigorous treatment of upscaling procedures related to physical modeling for porous media on micro meso and macro scales including detailed studies of micro structure systems and computational results for dual porosity models **Computational Fluid Dynamics and Reacting Gas Flows** Bjorn Engquist, Mitchell Luskin, Andrew Majda, 2012-12-06 This IMA Volume in Mathematics and its Applications COMPUTATIONAL FLUID DYNAMICS AND REACTING GAS FLOWS is in part the proceedings of a workshop which was an integral part of the 1986 87 IMA program on SCIENTIFIC COMPUTATION We are grateful to the Scientific Committee Bjorn Engquist Chairman Roland Glowinski Mitchell Luskin and Andrew Majda for planning and implementing an exciting and stimulating year long program We especially thank the Workshop Organizers Bjorn Engquist Mitchell Luskin and Andrew Majda for organizing a workshop which brought together many of the leading researchers in the area of computational fluid dynamics George R Sell Hans Weinberger PREFACE Computational fluid dynamics has always been of central importance in scientific computing It is also a field which clearly displays the essential theme of interaction between mathematics physics and computer science Therefore it was natural for the first workshop of the 1986 87 program on scientific computing at the Institute for Mathematics and Its Applications to concentrate on computational fluid dynamics In the workshop more traditional fields were mixed with fields of emerging importance such as reacting gas flows and non Newtonian flows The workshop was

marked by a high level of interaction and discussion among researchers representing varied schools of thought and countries

Modeling and Analysis of Diffusive and Advective Processes in Geosciences William Edward Fitzgibbon, Mary Fanett Wheeler, 1992-01-01 Not a collection of proceedings but 11 papers on topics that emerged from a September 1989 conference in Houston on mathematical and computational issues in geophysical fluid and solid mechanics The discussions include a semi linear heat equation subject to the specification of energy an analytic Modeling Transport Phenomena in Porous Media with Applications Malay K. Das, Partha P. Mukherjee, K. Muralidhar, 2017-11-21 This book is an ensemble of six major chapters an introduction and a closure on modeling transport phenomena in porous media with applications Two of the six chapters explain the underlying theories whereas the rest focus on new applications Porous media transport is essentially a multi scale process Accordingly the related theory described in the second and third chapters covers both continuum and meso scale phenomena Examining the continuum formulation imparts rigor to the empirical porous media models while the mesoscopic model focuses on the physical processes within the pores Porous media models are discussed in the context of a few important engineering applications These include biomedical problems gas hydrate reservoirs regenerators and fuel cells The discussion reveals the strengths and weaknesses of existing models as well as future research directions *q-Series and Partitions* Dennis Stanton, 2012-12-06 This IMA Volume in Mathematics and its Applications q Series and Partitions is based on the proceedings of a workshop which was an integral part of the 1987 88 IMA program on APPLIED COMBINATORICS We are grateful to the Scientific Committee Victor Klee Chairman Daniel Kleitman Dijen Ray Chaudhuri and Dennis Stanton for planning and implementing an exciting and stimulating year long program We especially thank the Workshop Organizer Dennis Stanton for organizing a workshop which brought together many of the major figures in a variety of research fields in which q series and partitions are used Avner Friedman Willard Miller Jr PREFACE This volume contains the Proceedings of the Workshop on q Series and Partitions held at the IMA on March 7 11 1988 Also included are papers by Goodman and O'Hara Macdonald and Zeilberger on unimodality This work was of substantial interest and discussed by many participants in the Workshop The papers have been grouped into four parts identities unimodality of Gaussian polynomials constant term problems and related integrals and orthogonal polynomials They represent a cross section of the recent work on q series including partitions combinatorics Lie algebras analysis and mathematical physics I would like to thank the staff of the IMA and its directors Avner Friedman and Willard Miller Jr for providing a wonderful environment for the Workshop Patricia Brick and Kaye Smith prepared the manuscripts **Computer Aided Proofs in Analysis** Kenneth R.
