and New Bodies of Knowledge in the Age of the First Globalization, 1400-1600 Luis Ribeiro, David Salomoni, Henrique Leitão, 2025-10-01 The European maritime expansion of the fifteenth century reshaped global politics economies and perceptions of space Central to this transformation was the mastery of long distance sea routes and the development of rutters technical documents recording navigational data and geographic observations Despite their significance rutters have often been overlooked in studies of European imperial expansion and globalization This book highlights the indispensable role of rutters and ships logbooks in early modern navigation and knowledge production Examining their legal scientific and cultural dimensions it explores their evolution influence on cartography and impact beyond Europe particularly in the Indian Ocean With contributions from experts in the field this volume underscores rutters as more than navigational aids they were pivotal instruments in shaping global interconnectedness Essential reading for historians of science maritime history and globalization this book reveals how these documents transformed Europe's perception of a world connected by oceans

ownership in this case over something that is unoccupiable and impossible to truly possess Both beautifully written and deeply researched *Tracks on the Ocean* shares how the lines drawn on maps tell the audacious and often tragic and violent stories of ocean voyages

Secret Science María M. Portuondo, 2013-04-18 The discovery of the New World raised many questions for early modern scientists What did these lands contain Where did they lie in relation to Europe Who lived there and what were their inhabitants like Imperial expansion necessitated changes in the way scientific knowledge was gathered and Spanish cosmographers in particular were charged with turning their observations of the New World into a body of knowledge that could be used for governing the largest empire the world had ever known As Mar a M Portuondo here shows this cosmographic knowledge had considerable strategic defensive and monetary value that royal scientists were charged with safeguarding from foreign and internal enemies Cosmography was thus a secret science but despite the limited dissemination of this body of knowledge royal cosmographers applied alternative epistemologies and new methodologies that changed the discipline and in the process how Europeans understood the natural world

Mapping and Charting in Early Modern England and France Christine Petto, 2015-03-26 Mapping and Charting for the Lion and the Lily Map and Atlas Production in Early Modern England and France is a comparative study of the production and role of maps charts and atlases in early modern England and France with a particular focus on Paris the cartographic center of production from the late seventeenth century to the late eighteenth century and London which began to emerge in the late eighteenth century to eclipse the once favored Bourbon center The themes that carry through the work address the role of government in map and chart making In France in particular it is the importance of the centralized government and its support for geographic works and their makers through a broad and deep institutional infrastructure Prior to the late eighteenth century in England there was no central controlling agency or institution for map chart or atlas production and any official power was imposed through the market rather than through the establishment of institutions There was no centralized support for the cartographic enterprise and any effort by the crown was often challenged by the power of Parliament which saw little value in fostering or supporting scholar geographers or a national survey This book begins with an investigation of the imagery of power on map and atlas frontispieces from the late sixteenth century to the seventeenth century In the succeeding chapters the focus moves from county and regional mapping efforts in England and France to the paper wars over encroachment in their respective colonial interests The final study looks at charting efforts and highlights the role of government support and the commercial trade in the development of maritime charts not only for the home waters of the English Channel but the distant and dangerous seas of the East Indies
