Lorandou,2025-07-24 Bridging the gap between two distinct philosophical traditions Eleni Lorandou finds consonance in the philosophies of Merleau Ponty and Utpaladeva to articulate a radically phenomenal view of embodiment In an argument for the transcendence of limiting dualisms in thinking she explores how western postmodernism and Indian classical thought can speak to one another across centuries complementing each other in a new and constructive philosophy By bringing the phenomenology of Merleau Ponty and the Recognition School of Utpaladeva into dialogue Lorandou uncovers intriguing insights into the constitution and possibilities of human experience She delves into the intricacies of how we perceive the world around us and considers how our embodied existence shapes our understanding and experience Questioning the notion that our perception directly corresponds to an objective reality and focusing on the topics of other minds Lorandou draws soteriological conclusions Examining the relevance of Merleau Ponty s phenomenological reduction and Utpaladeva s self recognition this illuminating study turns our attention to the topics of perception embodiment realism intersubjectivity and ultimately the transformative implications of philosophical inquiry **Remapping Reality** John A. McCarthy,2006-01-01

This book is about intersections among science philosophy and literature It bridges the gap between the traditional cultures of science and the humanities by constituting an area of interaction that some have called a third culture By asking questions about three disciplines rather than about just two as is customary in research this inquiry breaks new ground and resists easy categorization It seeks to answer the following questions What impact has the remapping of reality in scientific terms since the Copernican Revolution through thermodynamics relativity theory and quantum mechanics had on the way writers and thinkers conceptualized the place of human culture within the total economy of existence What influence on the other hand have writers and philosophers had on the doing of science and on scientific paradigms of the world Thirdly where does humankind fit into the total picture with its uniquely moral nature In other words rather than privileging one discipline over another this study seeks to uncover a common ground for science ethics and literary creativity Throughout this inquiry certain nodal points emerge to bond the argument cogently together and create new meaning These anchor points are the notion of movement inherent in all forms of existence the changing concepts of evil in the altered spaces of reality and the creative impulse critical to the literary work of art as well as to the expanding universe This ambitious undertaking is unified through its use of phenomena typical of chaos and complexity theory as so many leitmotifs While they first emerged to explain natural phenomena at the quantum and cosmic levels chaos and complexity are equally apt for explaining moral and aesthetic events Hence the title Remapping Reality extends to the reconfigurations of the three main spheres of human interaction the physical the ethical and the aesthetic or creative What's Wrong With Microphysicalism? Andreas Huttemann,2004-08-02 Microphysicalism the view that whole objects behave the way they do in virtue of the behaviour of

their constituent parts is an influential contemporary view with a long philosophical and scientific heritage In *What's Wrong With Microphysicalism* Andreas Hüttemann offers a fresh challenge to this view Hüttemann agrees with the microphysicalists that we can explain compound systems by explaining their parts but claims that this does not entail a fundamentalism that gives hegemony to the micro level At most it shows that there is a relationship of determination between parts and wholes but there is no justification for taking this relationship to be asymmetrical rather than one of mutual dependence Hüttemann argues that if this is the case then microphysicalists have no right to claim that the micro level is the ultimate agent neither the parts nor the whole have ontological priority Hüttemann advocates a pragmatic pluralism allowing for different ways to describe nature *What's Wrong With Microphysicalism* is a convincing and original contribution to central issues in contemporary philosophy of mind philosophy of science and metaphysics

Mysticism Jess Byron Hollenback, 1996 This sweeping study of mysticism by Jess Hollenback considers the writings and experiences of a broad range of traditional religious mystics including Teresa of Avila Black Elk and Gopi Krishna It also makes use of a new category of sources that more traditional scholars have almost entirely ignored namely the autobiographies and writings of contemporary clairvoyants mediums and out of body travelers This study contributes to the current debate about the contextuality of mysticism by presenting evidence that not only are the mystic's interpretations of and responses to experiences culturally and historically conditioned but historical context and cultural environment decisively shape both the perceptual and affective content of the mystic's experience as well Hollenback also explores the linkage between the mystic's practice of recollection and the onset of other unusual or supernormal manifestations such as photisms the ability to see auras telepathic sensitivity clairvoyance and out of body experiences He demonstrates that these extraordinary phenomena can actually deepen our understanding of mysticism in unexpected ways A unique feature of this book is its in depth analysis of empowerment an important phenomenon ignored by most scholars of mysticism Empowerment is a peculiar enhancement of the imagination thoughts and desires that frequently accompanies mystical states of consciousness Hollenback shows its cross cultural persistence its role in constructing the perceptual and existential environments within which the mystic dwells and its linkage to the fundamental contextuality of mystical experience

Ransomware and Cybercrime Andrew Jenkinson, 2022-06-16

In May 2021 Jim Gosler, known as the Godfather and commander of US agencies cyber offensive capability, said: "Either the Intelligence Community (IC) would grow and adapt or the Internet would eat us alive." Mr Gosler was speaking at his retirement only several months before the terrorist attacks of 9/11. He possibly did not realise the catalyst or the tsunami that he and his tens of thousands of US IC offensive website operatives had created and commenced. Over the last two decades, what Mr Gosler and his army of Internet keyboard warriors created would become the *modus operandi* for every faceless, nameless, state-sponsored or individual cybercriminal to replicate against an unwary, ill-protected and ignorant group of executives and security professionals who knew little to nothing about the clandestine methods of infiltration and weaponisation of the Internet that the US and UK agencies led all in the name of security. This book covers many cyber and ransomware attacks and events, including how we have gotten to the point of massive digital utilisation, particularly during the global lockdown and COVID-19 pandemic, to online spending that will see twice the monetary amount lost to cybercrime than what is spent online. There is little to no attribution, and with the IC themselves suffering cyberattacks, they are all blamed on being sophisticated ones, of course. We are witnessing the undermining of our entire way of life, our economies, and even our liberties. The IC has lots to answer for and unequivocally created the disastrous situation we are currently in. They currently have little to no answer. We need no we must demand change. That change must start by ensuring the Internet and all connections to it are secure and no longer allow easy access and exfiltration for both the ICs and cybercriminals.
