Teach it in English! Implementing English in the Political Classroom Janine Franke, 2013-08 Content and language integrated learning CLIL has recently gained great popularity in German schools

Reports of teachers and pupils indicate that in bilingual lessons foreign language learning is perceived to be less artificial and far more motivating than in traditional language teaching. In contrast to conventional language learning CLIL emphasises subject specific contents. Although many teachers are not sure in which way English as predominant medium of instruction should be taught most of the rather experimental attempts to do so are reported to be successful. Nevertheless in some German states there neither is a curriculum nor are there any recommendations specifically developed on the needs of different subjects taught in the integrated way. CLIL requires teachers to be strongly committed and to invest extra time and work to turn this relatively new concept into a success. But what is their motivation for establishing such learning environments? To find out about some of the reasons why CLIL is currently so successful in German schools I examine the example of political education in Saxony and the extra benefits of CLIL when being taught in English. *Language, Power, and Pedagogy* Jim Cummins, 2000-01-01. As linguistic diversity increases in countries around the world policy makers and educators are faced with complex and conflictual issues regarding appropriate ways of educating a multilingual school population. This volume reviews the research and theory relating to instruction and assessment of bilingual pupils focusing not only on issues of language learning and teaching but also the ways in which power relations in the wider society affect patterns of teacher pupil interaction in the classroom. *Immigrant Children Learning Dutch* René Appel, 2019-10-08. No detailed description available for Immigrant Children Learning Dutch. *Motivational Regulation in Foreign Language Learning* Kun Li, 2017-04-14. Based on surveys of motivational regulation strategies used by Chinese college students as well as the differences in using motivational regulation strategies between high and low English achievers the volume introduces models of self regulated learning and provides a theoretical foundation for the study of motivational regulation. *Investigating Tasks in Formal Language Learning* María Del Pilar Garcíá Mayo, 2007. This book brings together research that makes use of tasks to examine oral interaction written production vocabulary and reading lexical innovation and pragmatics in different formal language learning contexts and in different languages English French German Italian and Spanish.
