A History of Modern Planetary Physics Stephen G. Brush,1996-04-26 Where did we come from Before there was life there had to be something to live on a planet a solar system During the past 200 years astronomers and geologists have developed and tested several different theories about the origin of the solar system and the nature of the Earth Did the Earth and other planets form as a by product of a natural process that formed the Sun Did the solar system come into being as the result of catastrophic encounter of two stars Is the inside of the Earth solid liquid or gaseous The three volumes that make up A History of Modern Planetary Physics present a survey of these theories Nebulous Earth follows the development of the nineteenth century s most popular explanation for the origin of the solar system Laplace s Nebular Hypothesis This theory supposes that a flattened mass of gas extending beyond Neptune s orbit cooled and shrank throwing off in the process successive rings that in time coalesced to form several planets

Free public libraries and museum,1890 **In Search of Mechanisms** Carl F. Craver,Lindley Darden,2013-10-03 Neuroscientists investigate the mechanisms of spatial memory Molecular biologists study the mechanisms of protein synthesis and the myriad mechanisms of gene regulation Ecologists study nutrient cycling mechanisms and their devastating imbalances in estuaries such as the Chesapeake Bay In fact much of biology and its history involves biologists constructing evaluating and revising their understanding of mechanisms With In Search of Mechanisms Carl F Craver and Lindley Darden offer both a descriptive and an instructional account of how biologists discover mechanisms Drawing on examples from across the life sciences and through the centuries Craver and Darden compile an impressive toolbox of strategies that biologists have used and will use again to reveal the mechanisms that produce underlie or maintain the phenomena characteristic of living things They discuss the questions that figure in the search for mechanisms characterizing the experimental observational and conceptual considerations used to answer them all the while providing examples from the history of biology to highlight the kinds of evidence and reasoning strategies employed to assess mechanisms At a deeper level Craver and Darden pose a systematic view of what biology is of how biology makes progress of how biological discoveries are and might be made and of why knowledge of biological mechanisms

is important for the future of the human species *The Publishers' Circular and General Record of British and Foreign Literature* ,1889 The Museum ,1899 *The Publishers' Circular and Booksellers' Record* ,1919 *New Directions in Quantum Chaos* Società italiana di fisica,2000 The rapid progress of the research field of quantum chaos and its applications called for a book that keeps students abreast of the new developments and at the same time provides a solid basis in subjects which form the canon of the field This book discusses the following topics Spectral statistics and their semiclassical interpretation in terms of the Gutzwiller trace formula Quantum chaos and its applications in mesoscopic physics Spectral statistics and conductance fluctuations and Quantum chaos in systems with many degrees of freedom The book connects and continues past and present achievements and prepares the ground for a future full of intriguing and important developments
