

Promising Directions and Methods for Population-Environment Analysis

Wolfgang Lutz¹

Abstract

The scientific analysis of the interactions between the human population and its natural environment is highly complex and full of traps. Studies in this field often focus on just one specific mechanism by which population changes impact on environmental changes (or vice versa) in very specific settings. A broad variety of analytical tools, ranging from GIS-based studies over qualitative/anthropological research to computer simulation models, and the fact that these studies need to draw on several scientific disciplines, tend to make such studies less straightforward than the more conventional studies within one discipline. The combination of this analytical complexity with the fact that population-environment interdependencies are often perceived as being of greatest importance for the future makes this field particularly vulnerable to advocacy groups that have another agenda than the scientific one. In this presentation I will try to review the field and summarize the findings of a recent survey of promising methods in population-environment analysis (published as a supplement to *Population and Development Review*, Vol. 28, 2002, edited by W. Lutz, A. Prskawetz, and W. C. Sanderson).

Introduction

No human being can exist without the air to breathe, clean water to drink, other species to supply the food to eat, and an atmosphere that protects from extraterrestrial radiation. These are all aspects of the environment. Increasingly, our natural environment is being altered by human action. Hence, there can be no doubt that population changes and environmental changes influence one another. Within the last few decades, this commonsensical observation has given rise to hundreds of scientific articles and reports, and the flow shows no sign of abating. The premise of this lecture is that this literature forms the groundwork for a new and interdisciplinary field of studies that we call population-environment (P-E) analysis.

Is P-E Analysis a Specific Field of Study?

This paper² is built on the premise that P-E analysis is indeed an emerging and distinct field of scientific analysis. What justifies this statement? There seem to be three criteria that in combination justify to call a certain body of research studies a distinct field: (a) a critical mass of people that work on these issues, (b) a set of joint research questions, and (c) a set of common methodologies. For some fields of scientific studies all three criteria are being met; for other fields only the first two. Take Japanese studies as an example of a field that nobody would challenge as being distinct. It clearly has a critical mass of scholars working on Japan and has a common research focus although there is hardly a common methodology. The range of methods applied may include linguistic, geographic, anthropological, and economic approaches. In other fields such as nuclear physics or demography, there is a set of standard methodologies in addition to the critical mass and the common object of analysis. How do these criteria apply to P-E analysis?

population growth and poor resource management have combined to alter the planet s natural environment in dramatic and alarming ways For over twenty years considerable research and debate have focused on clarifying or disputing linkages between various forms of environmental change and various understandings of security At one extreme lie sceptics who contend that the linkages are weak or even non existent they are simply attempts to harness the resources of the security arena to an environmental agenda At the other extreme lie those who believe that these linkages may be the most important drivers of security in the 21st century indeed the very future of humankind may be at stake This book brings together contributions from a range of disciplines to present a critical and comprehensive overview of the research and debate linking environmental factors to security It provides a framework for representing and understanding key areas of intellectual convergence and disagreement clarifying achievements of the research as well as identifying its weaknesses and gaps Part I explores the various ways environmental change and security have been linked and provides principal critiques of this linkage Part II explores the linkage through analysis of key issue areas such as climate change energy water food population and development Finally the book concludes with a discussion of the value of this subfield of security studies and with some ideas about the questions it might profitably address in the future This volume is the first to provide a comprehensive overview of the field With contributions from around the world it combines established and emerging scholars to offer a platform for the next wave of research and policy activity It is invaluable for both students and practitioners interested in international relations environment studies and human geography **Demography: Analysis and Synthesis, Four**

Huff,Michael V. Kline,Darleen V. Peterson,2014-01-02 Edited by Robert M Huff Michael V Kline and Darleen V Peterson the Third Edition of Health Promotion in Multicultural Populations offers both students and practitioners an indispensable

resource on assessment and implementation guidelines for promoting health and enhancing behaviors that optimize health in any cultural community. Leading experts explore a wide range of topics including the context of culture, cross-cultural perceptions of health, conceptual approaches to multicultural health promotion, health disparities, and the contributions of multicultural populations. Using the Cultural Assessment Framework (CAF), this proven handbook includes a focus on six specific populations: Hispanic/Latino, African American, American Indian and Alaska Native, Asian American, Pacific Islanders, and Arab Americans. The text concludes with a set of tips for working cross-culturally and a discussion about where the field is heading with respect to research and practice in the 21st century.

Health Promotion in Multicultural Populations
Michael V. Kline, Robert M. Huff, 2008-06-11

The thoroughly updated Second Edition of *Health Promotion in Multicultural Populations* grounds readers in the understanding that health promotion programs in multicultural settings require an in-depth knowledge of the cultural group being targeted. Numerous advances and improvements in theory and practice in health promotion and disease prevention (HPDP) are presented. Editors Michael V. Kline and Robert M. Huff have expanded the book to include increased attention directed to students and instructors while also continuing to provide a handbook for practitioners in the field. This book combines the necessary pedagogical features of a textbook with the scholarship found in a traditional handbook. Several new chapters have been added early in the text to provide stronger foundations for understanding the five sections that follow. The book considers five specific multicultural groups: Hispanic/Latino, African American, American Indian and Alaska Native, Asian American, and Pacific Islander populations. The first chapter in each of the five population group sections presents an overview devoted to understanding this special population from a variety of perspectives. The second chapter of each section explains how to assess, plan, implement, and evaluate health promotion programs for each of the specific groups. The third chapter in each section highlights a case study to emphasize points made in the overview and planning chapters. The fourth chapter in each section provides tips for working with the cultural groups described in that section. New to the Second Edition: Devotes a chapter to traditional health beliefs and traditions that can help the practitioner better understand how these beliefs and traditions can impact on Western biomedical practices. Contains a new chapter that evaluates health disparities across the U.S. Presents a new chapter that examines ethical dilemmas and considerations in a multicultural context. Offers updated citations and content throughout. Gives selected Web sites of interest. Intended Audience: This book is ideal for practitioners and students in the fields of health promotion and education, public health, nursing, medicine, psychology, sociology, social work, physical therapy, radiology, technology, and other allied professions.

Theory, Method, and Practice in Computer Content Analysis Mark D. West, 2001-04-30

In recent years, computer content analysis has undergone something of a renaissance. Inexpensive and powerful desktop computers mean that computer analysis of texts is available to most researchers. The availability of software to do analyses, however, is not always linked to clear theoretical and methodological understandings. This volume seeks to deal with this concern by

providing from scholars in a variety of disciplines perspectives upon the theoretical and methodological issues which arise when conducting content analysis via computer Although it is not always obvious computer content analysis is a method which inevitably calls for theoretical assumptions Those theoretical assumptions in turn drive methodological considerations and method in turn determines the form of the practice of computer content analysis This volume includes ten articles by well known scholars utilizing computer content analysis A variety of methodological theoretical and practical issues are here addressed presenting unique methods and perspectives for the consideration of computer content analysis Intended for an audience of graduate students scholars and in field practitioners Theory Method and Practice of Computer Content Analysis will serve as an invaluable resource of ideas and practices for those interested in using computers to analyze textual material
