Population, Ecology, and Social Evolution Steven Polgar, 2011-06-03 No detailed description available for Population Ecology and Social Evolution

Ecology of Social Evolution Judith Korb, Juergen Heinze, 2008-02-23 Research on the evolution of social behaviour has been dominated by genetic relatedness for a long time however both recent empirical studies and theoretical concepts give growing evidence for ecological factors acting as very prominent additional or alternative driving forces in social evolution Now the time is ripe to investigate similarities and differences in the course of social evolution in different animals This book brings together renowned researchers working on sociality in different animals For the first time they compile the evidence for the importance of ecological factors in the evolution of social life ranging from invertebrate to vertebrate social systems and evaluate its importance versus that of relatedness

Domains and Major Transitions of Social Evolution Jacobus J. Boomsma, 2023-05-24 Evolutionary change is usually incremental and continuous but some increases in organizational complexity have been radical and divisive Evolutionary biologists who refer to such events as major transitions have not always appreciated that these advances were novel forms of pairwise commitment that subjugated previously independent agents Inclusive fitness theory convincingly explains cooperation and conflict in societies of animals and free living cells but to deserve its eminent status it should also capture how major transitions originated from prokaryote cells to eukaryote cells via differentiated multicellularity to colonies with specialized queen and worker castes As yet no attempt has been made to apply inclusive fitness principles to the origins of these events Domains and Major Transitions of Social Evolution develops the idea that major evolutionary transitions involved new levels of informational closure that moved beyond looser partnerships Early neo Darwinians understood this principle but later social gradient thinking obscured the discontinuity of life s fundamental organizational transitions The author argues that the major transitions required maximal kinship in simple ancestors not conflict reduction in already elaborate societies Reviewing more than a century of literature he makes testable predictions proposing that open societies and closed organisms require very different inclusive fitness explanations It appears that only human ancestors lived in societies that were already complex before our major cultural transition occurred We should therefore not impose the trajectory of our own social history on the rest of nature This thought provoking text is suitable for graduate level students taking courses in evolutionary biology behavioural ecology organismal developmental biology and evolutionary genetics as well as professional researchers in these fields It will also appeal to a broader interdisciplinary audience including the social sciences and humanities

Himalayan Households Thomas Earl Fricke, 1994 Available for the first time in English this is the definitive account of the practice of sexual slavery the Japanese military perpetrated during World War II by the researcher principally responsible for exposing the Japanese government s responsibility for these atrocities The large scale imprisonment and rape of thousands of women who were euphemistically called comfort women by the Japanese military first seized public attention

in 1991 when three Korean women filed suit in a Toyko District Court stating that they had been forced into sexual servitude and demanding compensation Since then the comfort stations and their significance have been the subject of ongoing debate and intense activism in Japan much if it inspired by Yoshimi s investigations How large a role did the military and by extension the government play in setting up and administering these camps What type of compensation if any are the victimized women due These issues figure prominently in the current Japanese focus on public memory and arguments about the teaching and writing of history and are central to efforts to transform Japanese ways of remembering the war Yoshimi Yoshiaki provides a wealth of documentation and testimony to prove the existence of some 2 000 centers where as many as 200 000 Korean Filipina Taiwanese Indonesian Burmese Dutch Australian and some Japanese women were restrained for months and forced to engage in sexual activity with Japanese military personnel Many of the women were teenagers some as young as fourteen To date the Japanese government has neither admitted responsibility for creating the comfort station system nor given compensation directly to former comfort women This English edition updates the Japanese edition originally published in 1995 and includes introductions by both the author and the translator placing the story in context for American readers

A Cooperative Species Samuel Bowles,Herbert Gintis,2011-05-31 A fascinating look at the evolutionary origins of cooperation Why do humans uniquely among animals cooperate in large numbers to advance projects for the common good Contrary to the conventional wisdom in biology and economics this generous and civic minded behavior is widespread and cannot be explained simply by far sighted self interest or a desire to help close genealogical kin In *A Cooperative Species* Samuel Bowles and Herbert Gintis pioneers in the new experimental and evolutionary science of human behavior show that the central issue is not why selfish people act generously but instead how genetic and cultural evolution has produced a species in which substantial numbers make sacrifices to uphold ethical norms and to help even total strangers The authors describe how for thousands of generations cooperation with fellow group members has been essential to survival Groups that created institutions to protect the civic minded from exploitation by the selfish flourished and prevailed in conflicts with less cooperative groups Key to this process was the evolution of social emotions such as shame and guilt and our capacity to internalize social norms so that acting ethically became a personal goal rather than simply a prudent way to avoid punishment Using experimental archaeological genetic and ethnographic data to calibrate models of the coevolution of genes and culture as well as prehistoric warfare and other forms of group competition *A Cooperative Species* provides a compelling and novel account of how humans came to be moral and cooperative

African Population and Capitalism Dennis D. Cordell,Joel W. Gregory,1994 This is a synthesis of case studies and theory which takes issue with established African demographic theory emphasising that demography is an historical process a permanent and varied adaptation to social and economic change The book covers 20 African societies in the sub Saharan region examining not the effects of slavery colonialism and capitalism on each but also the resistance and resilience of indigenous African institutions and individuals

Ranking, Resource and Exchange Colin Renfrew, Steven Shennan, 1982-09-02 Ranked societies are characterized by disparities in personal status that are often accompanied by the concentration of power and authority in the hands of a few dominant individuals. They stand between the sophistication of developed states and the relative simplicity of most hunter-gatherer groups and early agriculturalists. In some places and times they represented relatively brief phases of transition to more complex forms of organization; in others they existed as stable forms of adaptation for thousands of years. They are thus of great interest for archaeologists seeking to understand the dynamics of cultural evolution.

Evolution Science and Ethics in the Third Millennium Robert Cliquet, Dragana Avramov, 2018-01-10 The book aims to revitalise the interdisciplinary debate about evolutionary ethics and substantiate the idea that evolution science can provide a rational and robust framework for understanding morality. It also traces pathways for knowledge-based choices to be made about directions for future long-term biological evolution and cultural development in view of adaptation to the expected probable and possible future and the ecological sustainability of our planetary environment. The authors discuss ethical challenges associated with the major biosocial sources of human variation: individual variation, inter-personal variation, inter-group variation, and inter-generational variation. This book approaches the long-term challenges of the human species in a holistic way. Researchers will find an extensive discussion of the key theoretical/scientific aspects of the relationship between evolution and morality. Policy makers will find information that can help them better understand from where we are coming and inspire them to make choices and take actions in a longer-term perspective. The general public will find food for thought.

Hunters in Transition Marek Zvelebil, 2009-06-18 Hunters in Transition analyses the emergence of post-glacial hunter-gatherer communities and the development of farming.

What's New? Sander E. van der Leeuw, Robin Torrence, 2025-10-01 First published in 1989, *What's New* puts innovation firmly back on the agenda of archaeological interpretation. This book revives interest in the process of innovation and reinterprets it by drawing on original work done in a variety of disciplines. It demonstrates that the study of the components of innovation—innovation, invention, acceptance, and the context in which they occur—is essential if social change is to be better understood. The book contains detailed case studies that cover a broad geographical range in the prehistoric, historic, and modern world. It simulates and analyses the conditions of innovation and provides the necessary theoretical framework. The technologies involved are diverse: herding, fishing, pottery making, metalworking, and land management. Several important issues emerge from this diversity: it is the context of innovation that determines whether change will take place within hierarchical societies; ideology can both stimulate and deny innovation; and the potential for innovation, experimentation, and change in traditional societies is systematically underrated by the Western world, which is dominated by a narrow technological perspective. The contributors also study innovation in social and applied anthropology, industrial planning, and the natural sciences. *What's New* will provoke renewed discussion throughout the archaeological community about the process of innovation. Anthropologists, human geographers, and other

social scientists will find it fascinating because it provides a time dimension for the study of the conditions of human and social change **Health and Disease in Tribal Societies** Katherine Elliott, Julie Whelan, 2009-09-18 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world

Placemaking David Stea, Mete Turan, 2024-11-07 Originally published in 1993 as part of the Ethnoscapes Current Challenges in the Environmental Social Sciences series reissued now with a new series introduction *Placemaking Production of Built Environment in Two Cultures* is a book about the context of placemaking the production of vernacular architecture and settlement It is an attempt at prototheory the formation of a perspective with which to view built environment produced by traditional societies Focusing on two examples carved dwellings and other masonry structures of Anatolian Turkey and pre and post conquest Southwestern pueblos in the US Architectural and settlement phenomena are analyzed primarily in terms of the social forces that gave rise to them rather than their formal properties **Advances in Archaeological**

Method and Theory Michael B. Schiffer, 2014-05-19 Selections for Students from Volumes 1 4 *Continent of Hunter-Gatherers* Harry Lourandos, 1997-02-28 This book challenges traditional perceptions of Australian Aboriginal prehistory that the environment is the major determinant of hunter gatherers that Aborigines were egalitarian and culturally homogeneous and therefore experienced few economic and demographic changes Harry Lourandos argues that the social and economic processes of hunter gatherers were complex and that the prehistoric period was dynamic and revolutionary Lourandos presents prehistoric data reviews archaeological and ethnohistorical evidence and analyses environmental demographic and socially oriented perspectives drawing from them an original hypothesis He addresses initial colonisation the role of Tasmanian Aborigines the role of fire faunal extinctions the intensification debate horticultural origins plant exploitation and the significance of Australian prehistory in the study of other prehistoric hunter gatherer societies

Reconstructing Past Population Trends in Mediterranean Europe (3000 BC - AD 1800) John Bintliff, Kostas Sbonias, 2016-10-03 Archaeology of Populus Monograph in Archaeology of Mediterranean Landscapes Series Population trends and demographics in general are discussed through a variety of case studies based in Mediterranean Europe The range of archaeological techniques and methods of analysis includes regional field surveys artifact scatter analysis palaeoanthropology historical and documentary sources and studies of cemeteries *The Evolution and Emergence of RNA Viruses* Edward C. Holmes, 2009-06-25 RNA viruses provide unique insights into the patterns and processes of evolutionary change in real time The study of viral evolution is especially topical given the growing awareness that emerging and re emerging diseases most of which are caused by RNA viruses represent a major threat to public health However while the study of viral evolution has developed rapidly in the last 30 years relatively little attention has been directed toward linking

work on the mechanisms of viral evolution within cells or individual hosts to the epidemiological outcomes of these processes This novel book fills this gap by considering the patterns and processes of viral evolution across their entire range of spatial and temporal scales The Evolution and Emergence of RNA Viruses provides a comprehensive overview of RNA virus evolution with a particular focus on genomic and phylogenetic approaches This is the first book to link mechanisms of viral evolution with disease dynamics using high profile examples in emergence and evolution such as influenza HIV dengue fever and rabies It also reveals the underlying evolutionary processes by which emerging viruses cross species boundaries and spread in new hosts

Computational Molecular Evolution Ziheng Yang, 2006-10-05 The field of molecular evolution has experienced explosive growth in recent years due to the rapid accumulation of genetic sequence data continuous improvements to computer hardware and software and the development of sophisticated analytical methods The increasing availability of large genomic data sets requires powerful statistical methods to analyse and interpret them generating both computational and conceptual challenges for the field Computational Molecular Evolution provides an up to date and comprehensive coverage of modern statistical and computational methods used in molecular evolutionary analysis such as maximum likelihood and Bayesian statistics Yang describes the models methods and algorithms that are most useful for analysing the ever increasing supply of molecular sequence data with a view to furthering our understanding of the evolution of genes and genomes The book emphasizes essential concepts rather than mathematical proofs It includes detailed derivations and implementation details as well as numerous illustrations worked examples and exercises It will be of relevance and use to students and professional researchers both empiricists and theoreticians in the fields of molecular phylogenetics evolutionary biology population genetics mathematics statistics and computer science Biologists who have used phylogenetic software programs to analyze their own data will find the book particularly rewarding although it should appeal to anyone seeking an authoritative overview of this exciting area of computational biology

The Nature and Pace of Change in American Indian Cultures R. Michael Stewart, Kurt W. Carr, Paul A. Raber, 2016-03-31 Three thousand to four thousand years ago the Native Americans of the mid Atlantic region experienced a groundswell of cultural innovation This remarkable era known as the Transitional period saw the advent of broad bladed bifaces cache blades ceramics steatite bowls and sustained trade among other ingenious and novel objects and behaviors In The Nature and Pace of Change in American Indian Cultures eight expert contributors examine the Transitional period in Pennsylvania and posit potential explanations of the significant changes in social and cultural life at that time Building upon sixty years of accumulated data corrected radiocarbon dating and fresh research scholars are reimagining the ancient environment in which native people lived The Nature and Pace of Change in American Indian Cultures will give readers new insights into a singular moment in the prehistory of the mid Atlantic region and the daily lives of the people who lived there The contributors are Joseph R Blondino Kurt W Carr Patricia E Miller Roger Moeller Paul A Raber R Michael Stewart Frank J Vento Robert D Wall and

Heather A Wholey **World Anthropology** Mouton Publishers,1986 **Darwinism and Evolutionary Economics** John
Laurent,John Nightingale,2001-01-01 This outstanding collection of essays by leading scholars helps explain how
evolutionary economics has come of age They show how evolutionary economics offers a progressive and diverse research
agenda built on strong foundations These are essays of lasting value J Stanley Metcalfe University of Manchester UK
Darwinism is fast becoming an orthodoxy of modern thought a framework within which a wide range of knowledge
communities conduct their discourse Ever since its formation Darwinian theory has experienced a close though not always
comfortable association with economics Evolutionary economists now appear to show little concern for the consistency of
knowledge in their embrace of Darwinism Darwinism and Evolutionary Economics brings together contributions from
eminent authors who building on Darwin s own insights and on developments in evolutionary theory offer challenging views
on how economics can use evolutionary ideas effectively This collection of critical essays provides a thorough examination of
the application of Darwinian theory to economic thought and will appeal to evolutionary economists and all those with an
interest in Darwin innovation and evolutionary science
