Jordaan, 2012-12-06 IUTAM IAHR Symposium on Ice Structure Interaction Professor Bez Tabarrok Chairman of the Canadian National Committee CNC of the International Union of Theoretical and Applied Mechanics IUTAM invited Professor Derek Muggeridge to organize a symposium on ice structure interaction Dr Muggeridge readily agreed and prepared a proposal that was endorsed by the CNC and presented to the General Assembly Meeting of IUTAM for their consideration This Assembly gave its approval and provided the local organizing committee with the names of individuals who were willing to serve on the Scientific Committee Dr Muggeridge became chairman of this committee and Dr Ian Jordaan became co chairman of this committee as well as chairman of the local organizing committee The symposium followed the very successful previous meeting chaired by Professor P Tryde in Copenhagen by ten years Both

symposia utilized Springer Verlag to publish their proceedings The Faculty of Engineering and Applied Science at Memorial University of Newfoundland were particularly pleased to host this prestigious symposium as it marked the twentieth anniversary of its Ocean Engineering Research Centre *Working Group on Ice Forces Cold Regions Research and Engineering Laboratory (U.S.)*, 1989 **Advances In Coastal And Ocean Engineering, Vol 4** Philip L-f Liu, Norden E Huang, Costas Synolakis, Pablo Blondeaux, Giovanna Vittori, B Mutlu Sumer, Jorgen Fredsoe, 1999-06-17 This volume consists of five excellent review papers In the first paper A Review of Coastal Wave Modeling The Physical and Mathematical Problems N E Huang presents a summary of the state of the art of wave modeling in deep waters He points out several shortcomings in existing modeling approaches and expresses the urgent need for developing a statistical theory of surface waves in shallow waters Huang believes that the statistical theory can be formulated as the soliton turbulence He also points out other important issues in wave modeling including the air sea interaction processes and the physics of the wave current and dissipation processes In the second paper A C Radder focuses his discussion on the Hamiltonian Dynamics of Water Waves He demonstrates that the Hamiltonian theory of surface waves can be formulated in terms of surface elevation and the velocity potential at the free surface as canonical variables Several evolution equations can be readily obtained Radder also points out the need to develop a stochastic wave model in the shallow water environment The maximum runup is arguably the single most important parameter in the design of coastal structures and for the evaluation of the inundation potential of storm surges and tsunamis C E Synolakis presents a thorough review of the Exact Solutions of Shallow Water Wave Equations For a single sloping beach the evolution and runup of solitary dipole N and cnoidal waves are discussed These solutions are then extended to more practical problems The last two papers concern the flow and sediment motions near the seafloor In their paper Boundary Layer and Sediment Dynamics Under Sea Waves P Blondeaux and G Vittori give an expert review of the recent contributions on the understanding of the interaction of the coherent vortex with cohesionless or partially cohesive sediments in a boundary layer The formation and development of small scale bedforms in the coastal regions are also discussed Finally in Wave Scour Around Structures B M Sumer and J Fredsøe review the scouring processes around various types of structures Many recent experimental data and theoretical developments are presented **Special Report**, 1995 **U.S. Geological Survey Circular**, 1933 *1989 Annual Report on Alaska's Mineral Resources*, 1984

Ethology and Behavioral Ecology of Phocids Daniel P. Costa, Elizabeth A. McHuron, 2022-03-17 Phocid or earless or true seals are ecologically diverse occupying habitats from the tropics to the poles in marine and freshwater and feeding on anything from tiny zooplankton to other marine mammals There are 18 species of phocid seals the smallest species ringed seal is more than 20 times smaller than the largest southern elephant seal with marked sexual dimorphism present in some species This book examines the behavior ecology and physiology that allow phocid seals to inhabit such a wide range of habitats The book is composed of 16 chapters written by 37 authors from 8 countries The book first describes the general

patterns of phocid behavior followed by descriptions of what is known about well studied species We have taken a holistic approach focusing not only on the behaviors themselves but also on the factors that constrain the expression of behavior and the proximate mechanisms driving behavior In many cases the chapters represent collaborations between well established researchers and early mid career individuals who bring new perspectives to help carry the field of phocid behavioral ecology well into the future

Sinha, 2015-03-30 Sea Ice Physics and Remote Sensing addresses experiences acquired mainly in Canada by researchers in the fields of ice physics and growth history in relation to its polycrystalline structure as well as ice parameters retrieval from remote sensing observations The volume describes processes operating at the macro and microscale e g brine entrapment in sea ice crystallographic texture of ice types brine drainage mechanisms etc The information is supported by high quality photographs of ice thin sections prepared from cores of different ice types all obtained by leading experts during field experiments in the 1970s through the 1990s using photographic cameras and scanning microscopy In addition this volume presents techniques to retrieve a suite of sea ice parameters e g ice type concentration extent thickness surface temperature surface deformation etc from space borne and airborne sensor data The breadth of the material on this subject is designed to appeal to researchers and users of remote sensing data who want to develop quick familiarity with the capabilities of this technology or detailed knowledge about major techniques for retrieval of key ice parameters Volume highlights include Detailed crystallographic classification of natural sea ice the key information from which information about ice growth conditions can be inferred Many examples are presented with material to support qualitative and quantitative interpretation of the data Methods developed for revealing microstructural characteristics of sea ice and performing forensic investigations Data sets on radiative properties and satellite observations of sea ice its snow cover and surrounding open water Methods of retrieval of ice surface features and geophysical parameters from remote sensing observations with a focus on critical issues such as the suitability of different sensors for different tasks and data synergism Sea Ice Physics and Remote Sensing is intended for a variety of sea ice audiences interested in different aspects of ice related to physics geophysics remote sensing operational monitoring mechanics and cryospheric sciences

The Exploitation of Mammal Populations V.J. Taylor, N. Dunstone, 2012-12-06 Human exploitation of other mammals has passed through three historical phases distinct in their ecological significance though overlapping in time Initially Homo sapiens was a predator particularly of herbivores but also of fur bearing predators From about 11 000 years ago goats and sheep were domesticated in the Middle East rapidly replacing gazelles and other game as the principal source of meat The principal crops including wheat and barley were taken into agriculture at about the same time and the resulting Neolithic farming culture spread slowly from there over the subsequent 10 500 years In a few places such as Mexico Peru and China this Middle Eastern culture met and

merged with agricultural traditions that had made a similar but independent transition. These agricultural traditions provided the essential support for the industrial revolution and for a third phase of industrial exploitation of mammals. In this chapter these themes are drawn out and their ecological significance is investigated. Some of the impacts of humans on other mammals require consideration on a world-wide basis but the chapter concentrates parochially on Great Britain. What have been the ecological consequences of our exploitation of other mammals?

2.2.1 Predatory man

Our nearest relatives chimpanzees, orang-utans and gorillas are essentially forest species deriving most of their diet from the fruits of forest trees and the shoots and leaves of plants.

Marine Structures Engineering: Specialized Applications

Gregory Tsinker, 2012-12-06

Marine Structures Engineering is designed to help engineers meet the growing worldwide demand for construction of new ports and the modernization of existing ports and terminals. It provides an authoritative guide to the design, construction, rehabilitation, repair and maintenance of port and harbor structures. Each chapter is self-contained, allowing readers to access specific information. The Author draws on his extensive experience in offshore structure and port engineering to demonstrate evaluation, rehabilitation, repair and maintenance of in-service marine structures. Also covered in detail are state-of-the-art approaches to marine structures in cold regions with special attention to the role of ice loads, permafrost and other ice effects, shiplifts, marine railways, shipways and dry docks, offshore moorings, floating breakwaters, marinas, structures that protect bridge piers from ship impact. Offering practical information on all aspects of marine structures, this book serves as an indispensable resource to all engineers and professionals involved in design, construction, maintenance and modernization of ports and harbors.

Water Wave Kinematics

A. Tørum, O.T. Gudmestad, 2012-12-06

Water wave kinematics is a central field of study in ocean and coastal engineering. The wave forces on structures as well as sand erosion both on coastlines and in the ocean are to a large extent governed by the local distribution of velocities and accelerations of the water particles. Our knowledge of waves has generally been derived from measurements of the water surface elevations. The reason for this is that the surface elevations have been of primary interest and fairly cheap and reliable instruments have been developed for such measurements. The water wave kinematics has then been derived from the surface elevation information by various theories. However, the different theories for the calculation of water particle velocities and acceleration have turned out to give significant differences in the calculated responses of structures. In recent years, new measurement techniques have made it possible to make accurate velocity measurements. Hence, the editors deemed it to be useful to bring together a group of experts working actively as researchers in the field of water wave kinematics. These experts included theoreticians as well as experimentalists on wave kinematics. It was also deemed useful to include experts on the response of structures to have their views from a structural engineering point of view on what information is really needed on water wave kinematics.
