In the last decade, it's hard to design for "yesterday's" world of microwave technology. It's often impossible, then, even to get circuit designs up and running on those old specifications. Authored by a well-known expert in the industry, this unique book helps practicing engineers do just that by providing an extensive, proven, modern microwave circuit design "recipe" for fast design results.

Using a fresh, easy-to-read style, The RF and Microwave Circuit Design Cookbook reveals practical, tested methods for designing and implementing a wide range of nonlinear RF and microwave circuits, including all types of mixers, frequency multipliers, and more. A special feature is a complete treatment of FET nonlinear mixers, which offer the lowest intermodulation distortion of all types of mixers. This book also provides readers with hard-to-find information on creating both square-law and envelope filter detectors.

Stephen Maas is president of Nonlinear Technologies, Inc., California, a consulting company specializing in the design and analysis of nonlinear and time-varying RF/microwave components and systems. He earned his Ph.D. in electrical engineering from UCLA.
