Vassili N. Kouvelis, Georg Hausner, 2022-05-03      Applications of PCR in Mycology P. D. Bridge, 1998-01-01 Since the initial report of the amplification of specific DNA fragments using the polymerase chain reaction PCR in 1985 this technique has revolutionized molecular biology It enables the production of large quantities of DNA from minute amounts of sample material which can then be readily analyzed This facility has had an enormous influence on the way both fundamental and diagnostic questions are approached and its use is now considered essential for molecular work in all branches of biology The purpose of this book is to highlight the wide ranging applications of PCR in pure and applied mycology and to increase understanding of its potential benefits After a brief overview a group of internationally renowned mycologists give definitive descriptions of the use of PCR in their own specialized fields These include fungal gene expression and cloning taxonomy and speciation fungal mycobionts mycorrhizal fungi entomopathogenic fungi mycotoxin producing fungi diagnosis of fungal infections in animals seed borne diseases fungal plant interactions and applications with industrially important fungi Finally potential future directions for PCR work in mycology are discussed      **Introduction to Fungi** John Webster, Roland Weber, 2007-01-25 This new edition of the universally acclaimed and widely used textbook on fungal biology has been completely re written drawing directly on the authors research and teaching experience The text takes account of the rapid and exciting progress that has been made in the taxonomy cell and molecular biology biochemistry pathology and ecology of the fungi Features of taxonomic relevance are integrated with natural functions including their relevance to human affairs Special emphasis is placed on the biology and control of human and plant pathogens providing a vital link between fundamental and applied mycology The book is richly illustrated throughout with specially prepared drawings and photographs based on living material Illustrated life cycles are provided and technical terms are clearly explained Extensive reference is made to recent literature and developments and the emphasis throughout is on whole organism biology from an integrated multidisciplinary perspective      Nano-enabled Agrochemicals in Agriculture Mansour Ghorbanpour, Muhammad Adnan Shahid, 2022-03-12 Nano Enabled Agrochemicals in Agriculture presents a targeted overview of the safe implementation of nanotechnologies within agricultural and horticultural settings with the purpose of achieving enhanced production while maintaining ecological integrity The growing global request for agricultural crops and products requires high standards of quality and safety which has stimulated the search for new technologies that preserve their quality and delay their decomposition Nanotechnology may boost plant production by improving nutrient uptake use efficiency with nanoformulations of fertilizers and agrochemicals for plant enhancement detection and treatment of diseases and host parasite interactions at the molecular level using nanosensors It also may improve plant disease diagnostics removal of contaminants from soil and water postharvest management of vegetables and flowers and reclamation of salt affected soils Although the markets for nanoproducts and nanoformulations continue to increase there are also growing concerns regarding the fate and behavior of nanomaterials in environmental systems Exploring important topics related to

nanotechnology and nanomaterials the book includes the use of nanochemicals in insect pest management as nanofungicides nanoherbicides micronutrient supply and nanosensors to monitor crop and soil health conditions from detection of agrochemicals to their slow release of agrochemicals and their impact on related environs This book will serve as an excellent resource for a wide range of plant scientists who have concerns about nanomaterial interactions with terrestrial and aquatic plants Focuses on emerging important topics related to nanotechnology and nanomaterials on agricultural systems Emphasizes new applications of nanomaterials in the agricultural sciences from fertilizers to irrigation systems Addresses concerns about nanomaterial interactions with terrestrial and aquatic plants International Beta Genetic Resources Network L. Frese, International Plant Genetic Resources Institute, 1998 *Systematics and Evolution* David J. McLaughlin, Joseph W. Spatafora, 2013-03-14 Mycology the study of fungi originated as a subdiscipline of botany and was a descriptive discipline largely neglected as an experimental science until the early years of this century A seminal paper by Blakeslee in 1904 provided evidence for self incompatibility termed heterothallism and stimulated interest in studies related to the control of sexual reproduction in fungi by mating type specificities Soon to follow was the demonstration that sexually reproducing fungi exhibit Mendelian inheritance and that it was possible to conduct formal genetic analysis with fungi The names Burgeff Kniep and Lindegren are all associated with this early period of fungal genetics research These studies and the discovery of penicillin by Fleming who shared a Nobel Prize in 1945 provided further impetus for experimental research with fungi Thus began a period of interest in mutation induction and analysis of mutants for biochemical traits Such fundamental research conducted largely with *Neurospora crassa* led to the one gene one enzyme hypothesis and to a second Nobel Prize for fungal research awarded to Beadle and Tatum in 1958 Fundamental research in biochemical genetics was extended to other fungi especially to *Saccharomyces cerevisiae* and by the mid 1960s fungal systems were much favored for studies in eukaryotic molecular biology and were soon able to compete with bacterial systems in the molecular arena
