Rhumb Line Of Symbolism:

The Rhumb Line of Symbolism Laurent Le Sage, 1978 The self styled Symbolist poets this book holds represent only an articulate phase of a steady course in French poetry from the Romantic period to the present The direction taken by Romanticism broadly defined is that of the intuitive as against the rational the subjective as against the objective with a constant orientation toward individual liberty Thus Symbolism can be properly placed in the line of all mystical oracular illuminist or idealist traditions In this broad view Symbolism includes both some of the greatest writers of 19th century France and also many of the chief creative geniuses of the modern world Viewed narrowly the Symbolists are merely a swarm of poets grouping and regrouping themselves in the final fifteen years of the past century into ephemeral crews Hydropaths Hirsutes Decadents and other anti Parnassians with no poetic genius at the helm The aim of this book is to reconcile the broad and narrow views of Symbolism Its method is to give the ideas and experiences of twenty poets representative of the movement together with a selection from their writings Lying at the heart of Symbolist doctrine is the symbolic image Since Symbolist poets have assumed phenomena to have symbolic value as indications of the world of ideas behind the world of appearances they have deemed their role to be the revelation of this higher reality through symbolic imagery First come three Romantic precursors Sainte Beuve who exploited the vein of the humble and familiar Bertrand who used the quaint and the grotesque and Nerval who incorporated alchemy Following the pantheistic Gu rin come the three Symbolist wizards Baudelaire Mallarmé and Verlaine Next come the two savage poets Rimbaud and Lautréamont and eight of the poets prominent in the heyday of the movement The line leads to Valéry and Claudel 20th century geniuses of symbolist heritage In addition to the presentation and selected texts all poems are annotated and a reading list is given for each poet

Working with Map Projections Fritz Kessler, Sarah

Battersby, 2019-05-03 A map projection fundamentally impacts the mapmaking process Working with Map Projections A Guide to Their Selection explains why for any given map there isn't a single best map projection Selecting a projection is a matter of understanding the compromises and consequences of showing a 3 D space in two dimensions The book presents a clear understanding of the processes necessary to make logical decisions on selecting an appropriate map projection for a given data set The authors discuss the logic needed in the selection process describe why certain decisions should be made and explain the consequences of any inappropriate decision made during the selection process This book also explains how the map projection will impact the map's ability to fulfill its purpose uses real world data sets as the basis for the selection of an appropriate map projection and provides illustrations of an appropriately and inappropriately selected map projection for a given data set The authors take a novel approach to discussing map projections by avoiding an extensive inventory of mathematical formulae and using only the mathematics of map projections that matter for many mapping tasks They also present information that is directly applicable to the process of selecting map projections and not tied to a specific software package Written by two leading experts this book is an invaluable resource for anyone studying or working with geospatial data from students to experienced professionals and will help readers successfully weigh the pros and cons of choosing one projection over another to suit a map's intended purpose

Geography for Nongeographers Frank R. Spellman, 2010-03-16

Geography is a multidisciplinary field which looks at both physical and social aspects of the world The broad scope of the field makes it a daunting area for those who do not have a specific background in it Geography for Non Geographers thus introduces readers to the most important aspects of geography and how they affect us It covers all areas of geography from physical geography to climate and weather to human and cultural geography Geography for Non Geographers is presented in an accessible and straightforward manner explaining scientific concepts in the most basic way possible Along with basic geographical principles the text provides a clear concise presentation of the consequences of the physical interactions with the environment we inhabit Each chapter ends with a chapter review test to help evaluate mastery of the concepts presented Readers acquire an understanding of and skill in geographical principles adding a critical component to their professional knowledge

I: Theory H. Stewart, Mapping It Out Mark Monmonier, 2024-05-31 Writers know only too well how long it can take and how awkward it can be to describe spatial relationships with words alone And while a map might not always be worth a thousand words a good one can help writers communicate an argument or explanation clearly succinctly and effectively In his acclaimed *How to Lie with Maps* Mark Monmonier showed how maps can distort facts In *Mapping it Out* Expository Cartography for the Humanities and Social Sciences he shows authors and scholars how they can use expository cartography

the visual two dimensional organization of information to heighten the impact of their books and articles This concise practical book is an introduction to the fundamental principles of graphic logic and design from the basics of scale to the complex mapping of movement or change Monmonier helps writers and researchers decide when maps are most useful and what formats work best in a wide range of subject areas from literary criticism to sociology He demonstrates for example various techniques for representing changes and patterns different typefaces and how they can either clarify or confuse information and the effectiveness of less traditional map forms such as visibility base maps frame rectangle symbols and complementary scatterplot designs for conveying complex spatial relationships There is also a wealth of practical information on map compilation cartobibliographies copyright and permissions facsimile reproduction and the evaluation of source materials Appendixes discuss the benefits and limitations of electronic graphics and pen and ink drafting and how to work with a cartographic illustrator Clearly written and filled with real world examples Mapping it Out demystifies mapmaking for anyone writing in the humanities and social sciences A useful guide to a subject most people probably take too much for granted It shows how map makers translate abstract data into eye catching cartograms as they are called It combats cartographic illiteracy It fights cartophobia It may even teach you to find your way Christopher Lehmann Haupt The New York Times *Nineteenth-century French Studies* ,1979 Thomas Harriot Robyn Arianrhod,2019-04-04 As Robyn Arianrhod shows in this new biography the most complete to date Thomas Harriot was a pioneer in both the figurative and literal sense Navigational adviser and loyal friend to Sir Walter Raleigh Harriot whose life was almost exactly contemporaneous to Shakespeare s took part in the first expedition to colonize Virginia in 1585 Not only was he responsible for getting Raleigh s ships safely to harbor in the New World he was also the first European to acquire a working knowledge of an indigenous language from what is today the US and to record in detail the local people s way of life In addition to his groundbreaking navigational linguistic and ethnological work Harriot was the first to use a telescope to map the moon s surface and independently of Galileo recorded the behavior of sunspots and discovered the law of free fall He preceded Newton in his discovery of the properties of the prism and the nature of the rainbow to name just two more of his unsung firsts Indeed many have argued that Harriot was the best mathematician of his age and one of the finest experimental scientists of all time Yet he has remained an elusive figure He had no close family to pass down records and few of his letters survive Most importantly he never published his scientific discoveries and not long after his death in 1621 had all but been forgotten In recent decades many scholars have been intent on restoring Harriot to his rightful place in scientific history but Arianrhod s biography is the first to pull him fully into the limelight She has done it the only way it can be done through his science Using Harriot s re-discovered manuscripts Arianrhod illuminates the full extent of his scientific and cultural achievements expertly guiding us through what makes them original and important and the story behind them Harriot s papers provide unique insight into the scientific process itself Though his thinking depended on a more natural intuitive

approach than those who followed him and who achieved the lasting fame that escaped him Harriot helped lay the foundations of what in Newton's time would become modern physics Thomas Harriot A Life in Science puts a human face to scientific inquiry in the Elizabethan and Jacobean worlds and at long last gives proper due to the life and times of one of history's most remarkable minds **Air Commerce Bulletin** ,1931
