Rib Wavequide Theory by the Spectral Index Method Peter Neville Robson, Peter Calvin Kendall, 1990 Rib Waveguide Theory by the Spectral Index Method P. N. Robson, P. C. Kendall, 1990-11-30 The analysis of semiconductor rib waveguides has until now relied upon very large finite difference or finite element calculations sometimes using array processors Here is a comprehensive introduction to the new spectral index method a fast accurate reliable and stable method for finding waveguide propagation constants using Fourier methods Shows researchers and professionals the field specific state of the art problem solving methods as well as wider applications in the many similar circumstances where both reliability and accuracy are considered mandatory Photonics Modelling and Design Slawomir Sujecki, 2018-09-03 Photonics Modeling and Design delivers a concise introduction to the modeling and design of photonic devices Assuming a general knowledge of photonics and the operating principles of fibre and semiconductor lasers this book Describes the analysis of the light propagation in dielectric media Discusses heat diffusion and carrier transport Applies the presented theory to develop fibre and semiconductor laser models Addresses the propagation of short optical pulses in optical fibres Puts all modeling into practical context with examples of devices currently in development or on the market Providing hands on guidance in the form of MATLAB scripts tips and other downloadable content Photonics Modeling and Design is written for students and professionals interested in modeling photonic devices either for gaining a deeper understanding of the Methods for Modeling and Simulation of Guided-wave Optoelectronic Devices operation or to optimize the design Guided Wave Photonics Le Nguyen Binh, 2016-04-19 A comprehensive presentation of the theory and simulation of ,1995 optical waveguides and wave propagations in a guided environment Guided Wave Photonics Fundamentals and Applications with MATLAB supplies fundamental and advanced understanding of integrated optical devices that are currently employed in modern optical fiber communications systems and p Fabrication, Properties and Applications of Low-Dimensional Semiconductors M. Balkanski, Ivan Yanchev, 2012-12-06 A recent major development in high technology and one which bears considerable industrial potential is the advent of low dimensional semiconductor quantum structures. The research and development activity in this field is moving fast and it is thus important to afford scientists and engineers the opportunity to get updated by the best experts in the field The present book draws together the latest developments in the fabrication technology of quantum structures as well as a competent and extensive review of their fundamental properties and some remarkable applications. The book is based on a set of lectures that introduce different aspects of the basic knowledge available it has a tutorial content and could be used as a textbook Each aspect is reviewed from elementary concepts up to the latest developments Audience Undergraduates and graduates in electrical engineering and physics schools Also for active scientists and engineers updating their knowledge and understanding of the frontiers of the technology Analysis and Design of Vertical Cavity Surface Emitting Lasers S. F. Yu, 2003-09-04 A practical hands on guidebook for the efficient

modeling of VCSELs Vertical Cavity Surface Emitting Lasers VCSELs are a unique type of semiconductor laser whose optical output is vertically emitted from the surface as opposed to conventional edge emitting semiconductor lasers Complex in design and expensive to produce VCSELs nevertheless represent an already widely used laser technology that promises to have even more significant applications in the future Although the research has accelerated there have been relatively few books written on this important topic Analysis and Design of Vertical Cavity Surface Emitting Lasers seeks to encapsulate this growing body of knowledge into a single comprehensive reference that will be of equal value for both professionals and academics in the field The author a recognized expert in the field of VCSELs attempts to clarify often conflicting assumptions in order to help readers achieve the simplest and most efficient VCSEL models for any given problem Highlights of the text include A clear and comprehensive theoretical treatment of VCSELs Detailed derivations for understanding the operational principles of VCSELs Mathematical models for the investigation of electrical optical and thermal properties of VCSELs Case studies on the mathematical modeling of VCSELs and the implementation of simulation programs Theory of Wavequides and Transmission Lines Edward F. Kuester, 2020-09-19 This book covers the principles of operation of electromagnetic waveguides and transmission lines The approach is divided between mathematical descriptions of basic behaviors and treatment of specific types of waveguide structures Classical distributed network transmission lines their basic properties their connection to lumped element networks and the distortion of pulses are discussed followed by a full field analysis of waveguide modes Modes of specific kinds of waveguides traditional hollow metallic waveguides dielectric including optical waveguides etc are discussed Problems of excitation and scattering of waveguide modes are addressed followed by discussion of real systems and performance **International Conference on Transparent Optical Networks** ,1999

Optical Fiber Sensor Technology L.S. Grattan, B.T. Meggitt, 2013-03-09 Systems and Applications in Optical Fiber Sensor Technology The essential technology which underpins developments in optical fiber sensors continues to expand and continues to be driven to a very large extent by advances in optoelectronics which have been produced for the ever expanding optical communications systems and networks of the world The steps forward in the technology often accompanied by a reduction in the price of associated components have been and continue to be adapted for use in a wide variety of optical fiber sensor systems These include for example the use of photoinduced gratings as fiber sensor components coupled with the wider availability of shorter wavelength lasers bright luminescent sources and high sensitivity detectors which have opened up new possibilities for both novel fiber optic sensor applications and new sensing systems This is to be welcomed at a time when coupled with integrated optic miniaturized devices and detectors real possibilities of systems integration at lower cost and increased utility can be offered The fiber laser and the expansions of the types and availability of the doped fiber on which it is based offer further examples of the integration of the essential components of advanced optical sensor systems fitted for a new range of applications
