Robot Analysis The Mechanics Of Serial And Parallel Manipulators:

Robot Analysis Lung-Wen Tsai,1999-02-22 Complete state of the art coverage of robot analysis This unique book provides the fundamental knowledge needed for understanding the mechanics of both serial and parallel manipulators Presenting fresh and authoritative material on parallel manipulators that is not available in any other resource it offers an in depth treatment of position analysis Jacobian analysis statics and stiffness analysis and dynamical analysis of both types of manipulators including a discussion of industrial and research applications It also features The homotopy continuation method and dialytic elimination method for solving polynomial systems that apply to robot kinematics Numerous worked examples and problems to reinforce learning An extensive bibliography offering many resources for more advanced study Drawing on Dr Lung Wen Tsai s vast experience in the field as well as recent research publications Robot Analysis is a first rate text for upper level undergraduate and graduate students in mechanical engineering electrical engineering and computer studies as well as an excellent desktop reference for robotics researchers working in industry or in government

A Robotic Framework for the Mobile Manipulator Nguyen Van Toan,Phan Bui Khoi,2023-03-07 By proposing and forming a mobile manipulator for modern multi floor buildings A Robotic Framework for the Mobile Manipulator Theory and Application helps readers visualize an end to end workflow for making a robot system work in a targeted environment From a product oriented viewpoint this book is considered as a bridge from theories to real products in which robotic software modules and the robotic system integration are mainly concerned In the end readers will have an overview of how to build and integrate various single robotic modules to execute a list of designed tasks in the real world as well as how to make a robot system work independently without human interventions With references and execution guidelines provided at the end of each chapter the book will be a useful tool for developers and researchers looking to expand their knowledge about the robotics and the robotic software

Parallel Manipulators Jee-Hwan Ryu,2008-04-01 Parallel manipulators are characterized as having closed loop kinematic chains Compared to serial manipulators which have open ended structure parallel manipulators have many advantages in terms of accuracy rigidity and ability to manipulate heavy loads Therefore they have been getting many attentions in astronomy to flight simulators and especially in machine tool industries The aim of this book is to provide an overview of the state of art to present new ideas original results and practical experiences in parallel manipulators This book mainly introduces advanced kinematic and dynamic analysis methods and cutting edge control technologies for parallel manipulators Even though this book only contains several samples of research activities on parallel manipulators I believe this book can give an idea to the reader about what has been done in the field recently and what kind of open problems are in this area

Bio-inspired Motor Control Strategies for Redundant and Flexible Manipulator with Application to Tooling Tasks Gia Hoang Phan,Vijender Kumar Solanki,Nguyen Ho Quang,2022-02-23 This book presents a multi disciplinary view of all aspects of rehabilitation robotics and non invasive surgery ideal for anyone

new to the field It includes perspectives from both engineers and clinicians For skilled researchers and clinicians it also summarizes current robot technologies and their application to various pathologies The book will help the readers to develop the know how and expertise necessary to guide those seeking a comprehensive understanding of this topic through their use of several commercial devices for robotic rehabilitation The book targets the implementation of efficient robot strategies to facilitate the re acquisition of motor skills This technology incorporates the outcomes of behavioral studies on motor learning and its neural correlates into the design implementation and validation of robot agents that behave as optimal trainers efficiently exploiting the structure and plasticity of the human sensorimotor systems Mechanism and Machine Science
