Modelling and Identification in Robotics Krzysztof R. Kozłowski,2012-12-06 As the use and relevance of robotics for countless scientific purposes grows all the time research into the many diverse elements of the subject becomes ever more important and in demand This volume examines in depth the most topical complex issues of modelling and identification in robotics The book is divided into three main parts The first part is devoted to robot dynamics modelling and identification of robot and load parameters incorporating friction torques discussing identification schemes and presenting simulations and experimental results of robot and load dynamic parameters identification A general concept of robot programming language for research and educational purposes is examined and there is a detailed outline of its basic structures along with hardware requirements which both constitute an open robot controller architecture Finally a hybrid controller is derived and several experimental results of this system are outlined This impressive discussion of the topic covers both the theoretical and practical illustrated throughout by examples and experimental results and will be of value to anyone researching or practising within the field of robotics automation and system identification or to control engineers

Introduction to the Mechanics of Space Robots Giancarlo Genta,2011-10-27 Based on lecture notes on a space robotics course this book offers a pedagogical introduction to the mechanics of space robots After presenting an overview of the environments and conditions space robots have to work in the author discusses a variety of manipulatory devices robots may use to perform their tasks This is followed by a discussion of robot mobility in these environments and the various technical approaches The last two chapters are dedicated to actuators sensors and power systems used in space robots This book fills a gap in the space technology literature and will be useful for students and for those who have an interest in the broad and highly interdisciplinary field of space robotics and in particular in its mechanical aspects

Modeling and Control of a Tracked Mobile Robot for Pipeline Inspection Michał Ciszewski,Mariusz Giergiel,Tomasz Buratowski,Piotr Małka,2020-03-18 This book describes the design mathematical modeling control system development and experimental validation of a versatile mobile pipe inspection robot It also discusses a versatile robotic system for pipeline inspection together with an original adaptable tracked mobile robot featuring a patented motion unit Pipeline inspection is a common field of application for mobile robots because the

monitoring of inaccessible long and narrow pipelines is a very difficult task for humans The main design objective is to minimize the number of robots needed to inspect different types of horizontal and vertical pipelines with both smooth and rough surfaces The book includes extensive information on the various design phases mathematical modeling simulations and control system development In closing the prototype construction process and testing procedures are presented and supplemented with laboratory and field experiments *Applied Mechanics Reviews*, 1986 *Basics of Robotics* Adam Morecki, Jozef Knapczyk, 2014-05-04 This volume contains the basic concepts of modern robotics basic definitions systematics of robots in industry service medicine and underwater activity Important information on walking and mili walking machines are included as well as possible applications of microrobots in medicine agriculture underwater activity Computer-Aided Engineering for Manufacture Douglas A. Milner, 2012-12-06 The development of the factory of the future by major international corporations such as General Motors IBM Westinghouse etc now involves many practising engineers This book is an attempt to identify and describe some of the building blocks required for computer aided engineering for manufacture It begins with numerical control and the infrastructure required for the automation of individual islands within existing factories Computer aided design and computer aided manufacture are then discussed in detail together with their integration to improve manufacturing efficiency and flexibility Robotics and flexible manufacturing systems are examined as well as the management of these systems required for production optimization Finally there is an overview of the relatively new field of artificial intelligence which is being increasingly used in most aspects of computer aided engineering for manufacture There are many topics which could have been included or expanded upon with advantage but the authors have attempted to strike a balance so that the reader can obtain the maximum usefulness from a reasonably concise volume *Software Engineering for Experimental Robotics* Davide Brugali, 2007-02-15 This book reports on the concepts and ideas discussed at the well attended ICRA2005 Workshop on Principles and Practice of Software Development in Robotics held in Barcelona Spain April 18 2005 It collects contributions that describe the state of the art in software development for the Robotics domain It also reports a number of practical applications to real systems and discuss possible future developments **Robot Modelling** Paul G. Ranky, 1985 Advanced Information-Measuring Technologies and Systems II Volodymyr Eremenko, Artur Zaporozhets, 2025-10-25 This book the second volume of the book Advanced Information Measuring Technologies and Systems is a testament to the collaborative efforts of the Department of Information Measuring Technologies of the National Technical University of Ukraine Igor Sikorsky Kyiv Polytechnic Institute and the General Energy Institute of the National Academy of Sciences of Ukraine It presents the main scientific directions and issues of our joint research The presented results of scientific research are not just solutions to classic problems of information and measurement technologies but they also represent a leap into the future The prediction of the metrological reliability of information and measurement systems the features of the calibration of measuring devices and systems for measuring the parameters of electrical quantities the

development of methods for increasing the accuracy of coordinate and measurement systems and the accuracy of measuring the characteristics of harmonic signals in the time and frequency domain the construction of software and hardware for measurement channels of systems as well as applied tasks of information technologies control of the fertilizer granulation process using fuzzy algorithms and chaos theory and methods of using variable electromagnetic radiation for non contact movement and processing of space debris all showcase the ground breaking and exciting innovative potential of our research
