Robotics And Industrial Inspection Proceedings Of Spie Vol 36:

Handbook of Research on Advancements in Robotics and Mechatronics Habib, Maki K.,2014-12-31 The field of mechatronics integrates modern engineering science and technologies with new ways of thinking enhancing the design of products and manufacturing processes This synergy enables the creation and evolution of new intelligent human oriented machines The Handbook of Research on Advancements in Robotics and Mechatronics presents new findings practices technological innovations and theoretical perspectives on the the latest advancements in the field of mechanical engineering This book is of great use to engineers and scientists students researchers and practitioners looking to develop autonomous and smart products and systems for meeting today s challenges

Robotics Research Paolo Dario,Raja Chatila,2005-02-17 ISRR the International Symposium on Robotics Research is one of robotics pioneering symposia which has established some of the field s most fundamental and lasting contributions over the past two decades This book presents the results of the eleventh edition of Robotics Research ISRR03 offering a broad range of topics in robotics The contributions provide a wide coverage of the current state of robotics research the advances and challenges in its theoretical foundation and technology basis and the developments in its traditional and new emerging areas of applications The diversity novelty and span of the work unfolding in these areas reveal the field s increased maturity and expanded scope and define the state of the art of robotics and its future direction

Integration of Lasers and Fiber Optics Into Robotic Systems Janusz A. Marszalec,Elzbieta A. Marszalec,1994 A broad variety of techniques described in this book as applied to a number of tasks in robotics provide the reader with a feel for the potential of lasers and fiber optics in this area of increasing relevance The many examples of devices and systems that are included here are of interest to the nonspecialist as well as to the researcher and industrial practitioner

Advanced Concepts for Intelligent Vision Systems Wilfried Philips,Dan Popescu,Paul Scheunders,2007-08-18 This book constitutes the refereed proceedings of the 9th International Conference on Advanced Concepts for Intelligent Vision Systems ACIVS 2007 held in Delft The Netherlands August 2007 Coverage includes noise reduction and restoration segmentation motion estimation and tracking video processing and coding camera calibration image registration and stereo matching biometrics and security medical imaging image retrieval as well as classification and recognition

Intelligent Energy Field Manufacturing Wenwu Zhang,2018-10-03 Edited by prominent researchers and with contributions from experts in their individual areas Intelligent Energy Field Manufacturing Interdisciplinary Process Innovations explores a new philosophy of engineering An in depth introduction to Intelligent Energy Field Manufacturing EFM this book explores a fresh engineering methodology that not only integrates but goes beyond methodologies such as Design for Six Sigma Lean Manufacturing Concurrent Engineering TRIZ green and sustainable manufacturing and more This book gives a systematic introduction to classic non mechanical manufacturing processes as

well as offering big pictures of some technical frontiers in modern engineering The book suggests that any manufacturing process is actually a process of injecting human intelligence into the interaction between material and the various energy fields in order to transfer the material into desired configurations It discusses technological innovation dynamic M PIE flows the generalities of energy fields logic functional materials and intelligence the open scheme of intelligent EFM implementation and the principles of intelligent EFM The book takes a highly interdisciplinary approach that includes research frontiers such as micro nano fabrication high strain rate processes laser shock forming materials science and engineering bioengineering etc in addition to a detailed treatment of the so called non traditional manufacturing processes which covers waterjet machining laser material processing ultrasonic material processing EDM ECM etc Filled with illustrative pictures figures and tables that make technical materials more absorbable the book cuts across multiple engineering disciplines The majority of books in this area report the facts of proven knowledge while the behind the scenes thinking is usually neglected This book examines the big picture of manufacturing in depth before diving into the details

3D Imaging, Analysis and Applications Yonghuai Liu, Nick Pears, Paul L. Rosin, Patrik Huber, 2020-09-11 This textbook is designed for postgraduate studies in the field of 3D Computer Vision It also provides a useful reference for industrial practitioners for example in the areas of 3D data capture computer aided geometric modelling and industrial quality assurance This second edition is a significant upgrade of existing topics with novel findings Additionally it has new material covering consumer grade RGB D cameras 3D morphable models deep learning on 3D datasets as well as new applications in the 3D digitization of cultural heritage and the 3D phenotyping of crops Overall the book covers three main areas 3D imaging including passive 3D imaging active triangulation 3D imaging active time of flight 3D imaging consumer RGB D cameras and 3D data representation and visualisation 3D shape analysis including local descriptors registration matching 3D morphable models and deep learning on 3D datasets and 3D applications including 3D face recognition cultural heritage and 3D phenotyping of plants 3D computer vision is a rapidly advancing area in computer science There are many real world applications that demand high performance 3D imaging and analysis and as a result many new techniques and commercial products have been developed However many challenges remain on how to analyse the captured data in a way that is sufficiently fast robust and accurate for the application Such challenges include metrology semantic segmentation classification and recognition Thus 3D imaging analysis and their applications remain a highly active research field that will continue to attract intensive attention from the research community with the ultimate goal of fully automating the 3D data capture analysis and inference pipeline
