Role Of Plant Tissue Culture In Biodiversity Conservation And Economic Development:

Role of Plant Tissue Culture in Biodiversity Conservation and Economic Development S. K. Nandi, L. M. S. Palni, Ashok Kumar, 2002 **Role of Plant Tissue Culture in Biodiversity Conservation and Economic Development** S. K. Nandi, A. Kumar, 2002 *Plant Tissue Culture and Molecular Markers* Ashwani Kumar, N. S. Shekhawat, 2009 Plant tissue culture techniques help in understanding basic life processes which is essential to improving crop productivity Furthermore recently molecular biology has assumed great importance with respect to plant biotechnology This book combines all three aspects into one with a focus on practical applications of various techniques It discusses micropropagation studies on several crop plants the molecular basis of understanding various life processes including the molecular basis of somatic embryogenesis and other physiological and biochemical processes having significant biotechnological applications It also covers in vitro studies of certain important plants like Aloe vera Simmondsia chinensis Anacyclus pyrethrum and Crataeva nurvala Arachis hypogaea L Phoenix dactylifera Dendrocalamus asper Asparagus adscendens Roxb natural products of plant origin with their therapeutic potential and biotechnological production as well as genome analysis of crop plants with future applications in biotechnology *Plant Tissue Culture: Propagation, Conservation and Crop Improvement* Mohammad Anis, Naseem Ahmad, 2016-10-08 This book presents basic concepts methodologies and applications of biotechnology for the conservation and propagation of aromatic medicinal and other economic plants It caters to the needs and challenges of researchers in plant biology biotechnology the medical sciences pharmaceutical biotechnology and pharmacology areas by providing an accessible and cost effective practical approach to micro propagation and conservation strategies for plant species It also includes illustrations describing a complete documentation of the results and research into particular plant species conducted by the authors over the past 5 years Plant Biotechnology has been a subject of academic interest for a considerable time In recent years it has also become a useful tool in agriculture and medicine as well as a popular area of biological research Current economic growth is globally projected in a highly positive manner but the challenges many countries face with regard to food feed malnutrition infectious diseases the newly identified life style diseases and energy shortages all of which are worsened by an ever deteriorating environment continue to pull the growth digits back The common thread that connects all of the above challenges is biotechnology which could provide many answers Molecular biology and biotechnology have now become an integral part of tissue culture research The tremendous impact generated by genetic engineering and consequently of transgenics now allows us to manipulate plant genomes at will There has indeed been a rapid development in this area with major successes in both developed and developing countries The book introduces several new and exciting areas to researchers who are unfamiliar with plant biotechnology and also serves as a review of ongoing research and future directions for scholars The book highlights numerous methods for in vitro propagation and utilization of techniques in raising transgenics to help readers reproduce the experiments discussed **Plant**

Biotechnology and Molecular Markers S. Srivastava, A. Narula, 2006-01-16 The genesis of the volume Plant Biotechnology and Molecular Markers has been the occasion of the retirement of Professor Sant Saran Bhojwani from the Department of Botany University of Delhi For Professor Bhojwani retirement only means relinquishing the chair as being a researcher and a teacher which has always been a way of life to him Professor Bhojwani has been an ardent practitioner of modern plant biology and areas like Plant Biotechnology and Molecular Breeding have been close to his heart The book contains original as well as review articles contributed by his admirers and associates who are experts in their area of research While planning this contributory book our endeavour has been to incorporate articles that cover the entire gamut of Plant Biotechnology and also applications of Molecular Markers Besides articles on in vitro fertilization and micropropagation there are articles on forest tree improvement through genetic engineering Considering the importance of conservation of our precious natural wealth one article deals with cryopreservation of plant material Chapter on molecular marker considers DNA indexing as markers of clonal fidelity of in vitro regenerated plants and prevention against bio piracy A couple of write ups also cover stage specific gene markers DNA polymorphism and genetic engineering including raising of stress tolerant plants to sustain productivity and help in reclamation of degraded land

Trees: Propagation and Conservation Ankita Varshney, Mohammad Anis, 2014-01-14 Plant tissue culture is an essential component of Biotechnology which has gained unbeatable recognition in plant sciences for successful micropropagation and improvement of plant species leading to the commercial application A number of plant species have been investigated around the globe This book presents current research on the application of in vitro technology in the improvement of *Balanites aegyptiaca* Del a medicinal plant of semi arid tropics The worldwide importance of forestry summed to the lengthy generation cycles of tree species makes unavoidable development of new technologies that complement conventional tree breeding programmes in order to obtain improved genotypes Recently a new set of tools has become available in the past 20 years that combined with traditional plant breeding will allow scientists to generate products that are genetically improved varieties of the future These set of tools come under the general title of Biotechnology The three specific biotechnological tools have been successfully used in several programmes of plant conservation namely tissue culture techniques for in vitro propagation the use of molecular markers to assess the degree of variability among population and techniques of long term conservation such as encapsulation and cryopreservation Plant tissue culture techniques are particularly relevant and become an alternative not only for large scale propagation of individuals that are threatened reduce production costs and increase gains to the industry but also to provide ecological advantages as in phytoremediation or in the establishment of artificial plantings in weed infested site The book gives a complete documentation of the results and demonstration of *Balanites aegyptiaca* conducted by the authors over the past 5 years The end to end approach developed through plant tissue culture techniques is reflected in the book and there has been a successful transfer of technology from lab to field The authors hope that this information would provide

valuable data and also be a reference material for future research activities in this area

Recent Trends in Biotechnology and Therapeutic Applications of Medicinal Plants Mohd. Shahid, Anwar Shahzad, Abida Malik, Aastha Sahai, 2013-05-13 The book provides an overview of current trends in biotechnology and medicinal plant sciences The work includes detailed chapters on various advance biotechnological tools involved in production of phytoactive compounds of medicinal significance Some recent and novel research studies on therapeutic applications of different medicinal plants from various geographical regions of the world have also been included These studies report the antimicrobial activity of various natural plant products against various pathogenic microbial strains Informative chapters on recent emerging applications of plant products such as source for nutraceuticals and vaccines have been integrated to cover latest advances in the field This book also explores the conservation aspect of medicinal plants Thus chapters having comprehensively compiled in vitro conservation protocols for various commercially important rare threatened and endangered medicinal plants were provided in the present book

Medicinal Plant Biotechnology Rajesh Arora, 2010 Covering the latest advances in the use of plants to produce medicinal drugs and vaccines examines topics including plant tissue culture secondary metabolite production metabolomics and metabolic engineering bioinformatics molecular farming and future biotechnological directions

Conservation of Tropical Plant Species M.N. Normah, H.F. Chin, Barbara M. Reed, 2012-08-04 The book is designed to provide a review on the methods and current status of conservation of the tropical plant species It will also provide the information on the richness of the tropical plant diversity the need to conserve and the potential utilization of the genetic resources Future perspectives of conservation of tropical species will be discussed Besides being useful to researchers and graduate students in the field we hope to create a reference for a much wider audience who are interested in conservation of tropical plant diversity
