Practical Precision Livestock Farming T. Bahanzi, V. Halas, F. Maroto-Molina, 2023-08-14 Precision livestock farming PLF technologies have been heavily promoted in the past but the implementation of these technologies is not easy Numerous technical challenges need to be solved before PLF technologies will supply the desired information in a reliable and consistent way Farm implementations regularly encounter difficulties The practical experience associated with these technologies do not always match their theoretical potential 93 authors from 16 countries were asked to report on the actual practical experiences technology developers and users had under farm conditions to try and understand this difference between practice and theory This book aims to eliminate the mystery behind the Smart PLF tools and presents the hard facts reported by individuals that have practical experience using these technologies The book also explores various aspects of PLF including the 1 challenges associated with developing and using various technologies 2 the importance of training and ethical aspects of PLF tools and 3 the difficulties related to commercialisation of PLF systems We hope that the honest presentation of the pros and cons of PLF management tools will help the supporters of precision farming to better use and interact with modern technologies and thus sustain viable livestock production worldwide

Five practical actions towards low-carbon livestock Food and Agriculture Organization of the United Nations, 2019-11-27 Livestock provide valuable nutritional benefits as well as supporting livelihoods and the resilience of families and communities Demand for animal products continues to grow in response to rising population and increasing wealth especially in low and middle income countries In spite of productivity gains greenhouse gas emissions from livestock are also increasing Successful action on climate change through practical action in livestock agrifood systems is an urgent priority but must not come at the expense of other sustainability objectives particularly those relating hunger and poverty Hence there is a need to balance the benefits of animal source foods and livestock keeping for nutrition health and livelihoods with the urgent need to reduce greenhouse gas emissions to tackle the climate crisis which also threatens food security The following five practical actions can be widely

implemented for measurable and rapid impacts on livestock emissions 1 boosting efficiency of livestock production and resource use 2 Intensifying recycling efforts and minimizing losses for a circular bioeconomy 3 capitalizing on nature based solutions to ramp up carbon offsets 4 striving for healthy sustainable diets and accounting for protein alternatives and 5 developing policy measures to drive change This brief describes how these can be implemented in integrative and sustainable ways taking account the diversity of livestock systems and enhancing synergies and managing tradeoffs with other sustainable development objectives FAO can help by providing developing tools methodologies and protocols for measuring emissions and supporting the development and analysis of technical and policy options towards sustainable low carbon livestock
