Mitochondria In Pathogenesis:

Mitochondria in Pathogenesis John J. Lemasters, Anna-Liisa Nieminen, 2007-05-08 Mitochondria are organelles in each cell outside the nucleus and are the energy source of all cells As such they are crucial to the healthy functioning of cells Recent research has shown that mitochondrial dysfunction underlies a broad spectrum of disease from maternally inherited genetic disorders to metabolism defects aging stroke and neurodegenerative diseases such as Parkinson s Alzheimer s and Lou Gehrig s disease This book brings together top researchers whose work in examining the pathophysiologic processes will lead to new strategies for prevention and treatment *Mitochondrial Pathogenesis* Hong Kyu Lee, Salvatore

Calcium Homeostasis in Amyotrophic Lateral Sclerosis: From Current Developments in the Laboratory to Clinical

Treatments Manoj Kumar Jaiswal, 2017-04-17 Amyotrophic lateral sclerosis ALS is a rapidly progressive devastating and fatal disease characterized by selective loss of upper and lower motor neurons of the cerebral cortex brainstem spinal cord and muscle atrophy In spite of many years of research the pathogenesis of ALS is still not well understood ALS is a multifaceted genetic disease in which genetic susceptibility to motor neuron death interacts with environmental factors and there is still no cure for this deleterious disease At present there is only one FDA approved drug Riluzole which according to past studies only modestly slows the progression of the disease and improves survival by up to three months The suffering of the ALS patients and their families is enormous and the economic burden is colossal There is therefore a pressing need for new therapies Different molecular pathways and pathological mechanisms have been implicated in ALS According to past studies altered calcium homeostasis abnormal mitochondrial function protein misfolding axonal transport defects excessive production of extracellular superoxide radicals glutamate mediated excitotoxicity inflammatory events and activation of oxidative stress pathways within the mitochondria and endoplasmic reticulum can act as major contributor that eventually leads to loss of connection between muscle and nerve ultimately resulting to ALS However the detailed molecular and cellular pathophysiological mechanisms and origin and temporal progression of the disease still remained elusive Ongoing research and future advances will likely advance our improve understanding about various involved pathological mechanism ultimately leading to discoveries of new therapeutic cures Importantly clinical biomarkers of disease onset and progression are thus also urgently needed to support the development of the new therapeutic agents and novel preventive and curative strategies Effective translation from pre clinical to clinical studies will further require extensive knowledge regarding drug activity bioavailability and efficacy in both the pre clinical and clinical setting and proof of biological activity in the target tissue During the last decades the development of new therapeutic molecules advance neuroimaging tools patient derived induced stem cells and new precision medicine approaches to study ALS has significantly improved our understanding of disease In particular new genetic tools neuroimaging methods cellular probes biomarker study and molecular techniques that

achieve high spatiotemporal resolution have revealed new details about the disease onset and its progression In our effort to provide the interested reader clinician and researchers a comprehensive summaries and new findings in this field of ALS research hereby we have created this electronic book which comprises of twenty seven chapters having various reviews perspective and original research articles All these chapters and articles in this book not only summarize the cutting edge techniques approaches cell and animal models to study ALS but also provide unprecedented coverage of the current developments and new hypothesis emerging in ALS research Some examples are novel genetic and cell culture based models mitochondria mediated therapy oxidative stress and ROS mechanism development of stem cells and mechanism based therapies as well as novel biomarkers for designing and testing effective therapeutic strategies that can benefit ALS patients who are at the earlier stages in the disease I am extremely grateful to all the contributors to this book and want to thank them for their phenomenal efforts Manoj Kumar Jaiswal Ph D February 5 2017 New York NY

Common pathophysiology underpinning Parkinson's disease and other neurodegenerative diseases

Sheila Pirooznia,Nikhil Panicker ,Liana Rosenthal,2025-09-30 A wide range of neurodegenerative disorders affect the central nervous system causing changes in neuronal circuitry loss in neuronal connections and eventual neuronal death The high prevalence of neurodegenerative diseases like Parkinson s disease Alzheimer s disease and other degenerative brain disorders in the aging population poses a significant burden on global healthcare systems Given their highly complex nature etiologic research on many of these neurodegenerative diseases are often conducted in isolation However elucidating conserved mechanistic underpinnings of neurodegenerative diseases could be utilized to develop pan neurodegenerative treatments interventions Is it possible to tease apart the similarities and differences between different neurodegenerative diseases at the molecular cellular and organismal levels Could there be common pathophysiological pathways that lead to synaptic loss and neuronal death This research topic intends to address these questions broadly and encourages the submission of research findings that could help understand the interplay between different neurodegenerative diseases and uncover novel therapeutic opportunities for neuroprotection during aging Some examples include Proteotoxicity Clearance of
