Shapshak, Seetharaman Balaji, Pandjassaram Kanguane, Jens H. Kuhn, Charurut Somboonwit, John T. Sinnott, 2025-07-11 The purpose of this fifth volume in the Global Virology series is to describe and propose vaccines focusing primarily on viral vaccines In addition to human vaccines animal viral vaccines are included since animals are used in vaccine research and the spread of diseases to from and among animals birds and humans permeates the ecosystem Due to climatic geographical and social factors there is increased global spread of viruses and other infectious agents Contributory factors include global

warming spread of vectors increased human travel encroachment into animal and avian environments war pestilence malnutrition and environmental economic and social collapse GVV will address vaccines for many of the viruses addressed in previous series volumes as well as for viruses not previously covered and novel and future vaccine technologies Advances in vaccine effectiveness and molecular engineering approaches are included such as gene therapy and CRISPR technologies

Molecular Neurovirology Raymond P. Roos, 2012-12-06 Neurovirology the study of viral infection of the nervous system has evolved at the interface of three of the most rapidly unfolding fields of investigation neurobiology virology and immunology In all three increasing knowledge about the molecular structure of surface receptors how intracellular messages are transmitted and how diversity is regulated genetically is provided along with the techniques of molecular biology This promises to give us knowledge not only about the process of infection and the complex host and viral determinants of neuroinvasiveness and neurovirulence but eventually it will provide the background from which to engineer vaccines and to devise novel therapeutic agents Animal virology and molecular biology developed quite independently from different origins Animal virology was originally the province of the pathologists and by clinical observation and histological preparations they tried to explain the incubation period the pathways of virus spread and the mechanisms of disease Molecular virology grew out of biochemistry particularly through studies of bacteriophage with emphasis on the physical and chemical structure of viruses and the sequences of biochemical events during the replicative cycle in cells The Retroviridae Jay A. Comparative Immunology of Marine Mammals Giovanni Di Guardo, Michael F. Criscitiello, Eva Sierra, Sandro Mazzariol, 2019-11-21 Marine mammals MMs are regarded as valuable bioindicators with tremendous potential for public health However many aspects of their immune system remain poorly understood Monitoring immune responses of MMs is pivotal for the health assessment of both individuals and populations as well as providing the scientific basis for analyzing the anthropogenic environmental impact on marine ecosystems and marine terrestrial interphases For instance the increasing susceptibility of Mediterranean whale and dolphin populations to various diseases has been linked to a possible negative influence of multiple environmental factors on the immune system of MMs The currently limited knowledge on MM immunology has mainly centered on i lymphocyte transformation assays ii natural killer cell activity iii phagocytic activity and respiratory burst iv humoral immune responses v cytokines and vi acute phase immune responses Therefore further research is essential for deepening our understanding of the specificity of the host immune response in MMs with a particular emphasis on the genesis and dynamics of i cytokine networks or signatures ii transcriptional regulation of immune cells and iii major immunomodulators High throughput molecular techniques such as transcriptomic analysis and RNA sequencing may enable the characterization of immune gene responses at the transcriptomic level This integrative and holistic approach requires sophisticated tools and methods capable of unveiling the diversity of immune cells and immunologically relevant molecules that orchestrate environmental adaptation and immune protection against pathogens in MMs This Research Topic aims to

provide a comprehensive overview of the current knowledge of MM immunology with a particular emphasis on structural and functional studies at the protein and cellular level We wish to encourage and coordinate studies and investigations in order to fill gaps of knowledge in this field This article collection aims to help gain more data regarding a The characterization of the immune system in several species of MMs i e cetaceans pinnipeds and sirenians b The interplay between the host immune system and the most relevant pathogens e g Morbillivirus Brucella Toxoplasma gondii and c The possible interplay between the immune system and contaminants
