Nutrient Use Efficiency in Plants Malcolm J. Hawkesford,Stanislav Kopriva,Luit J. De Kok,2014-11-14 Nutrient Use Efficiency in Plants Concepts and Approaches is the ninth volume in the Plant Ecophysiology series It presents a broad

overview of topics related to improvement of nutrient use efficiency of crops Nutrient use efficiency NUE is a measure of how well plants use the available mineral nutrients It can be defined as yield biomass per unit input fertilizer nutrient content NUE is a complex trait it depends on the ability to take up the nutrients from the soil but also on transport storage mobilization usage within the plant and even on the environment NUE is of particular interest as a major target for crop improvement Improvement of NUE is an essential pre requisite for expansion of crop production into marginal lands with low nutrient availability but also a way to reduce use of inorganic fertilizer

Efficient Nitrogen Fertilizer Management to Improve Crop Production Li Wang,Ying Zhao,Jianwei Lu,2024-05-22 The improvement in global crop production over the past several decades has been associated with increased use of nitrogen N fertilizer However on average less than 50% of the nitrogen added to croplands globally is harvested as crop product Inefficient use of N fertilizer by crops will result in substantial agricultural nitrogen losses posing threats to human and ecosystem health Crop production must increase dramatically to meet the growing demand for food and biofuels projected for 2050 To boost crop yield with lowered environmental cost the use of high potential crop cultivars and efficient nitrogen fertilizer management are required Recent advances in N management practices such as enhanced efficiency fertilizer use improved manure management and machine deep placement of fertilizer have opened up new strategies to achieve improved crop production with N use reduction A better understanding of the key crop traits and regulatory processes in response to N fertilizer managements will facilitate the increase in crop yield N use efficiency while minimizing impacts on the environment

Nutrient Use Efficiency: from Basics to Advances Amitava Rakshit,Harikesh Bahadur Singh,Avijit Sen,2014-12-26 This book addresses in detail multifaceted approaches to boosting nutrient use efficiency NUE that are modified by plant interactions with environmental variables and combine physiological microbial biotechnological and agronomic aspects Conveying an in depth understanding of the topic will spark the development of new cultivars and strains to induce NUE coupled with best management practices that will immensely benefit agricultural systems safeguarding their soil water and air quality Written by recognized experts in the field the book is intended to provide students scientists and policymakers with essential insights into holistic approaches to NUE as well as an overview of some successful case studies In the present understanding of agriculture NUE represents a question of process optimization in response to the increasing fragility of our natural resources base and threats to food grain security across the globe Further improving nutrient use efficiency is a prerequisite to reducing production costs expanding crop acreage into non competitive marginal lands with low nutrient resources and preventing environmental contamination The nutrients most commonly limiting plant growth are N P K S and micronutrients like Fe Zn B and Mo NUE depends on the ability to efficiently take up the nutrient from the soil but also on transport storage mobilization usage within the plant and the environment A number of approaches can help us to understand NUE as a whole One involves adopting best crop management practices that take into account root induced rhizosphere processes which play a pivotal role in

controlling nutrient dynamics in the soil plant atmosphere continuum New technologies from basic tools like leaf color charts to sophisticated sensor based systems and laser land leveling can reduce the dependency on laboratory assistance and manual labor Another approach concerns the development of crop plants through genetic manipulations that allow them to take up and assimilate nutrients more efficiently as well as identifying processes of plant responses to nutrient deficiency stress and exploring natural genetic variation Though only recently introduced the ability of microbial inoculants to induce NUE is gaining in importance as the loss immobilization release and availability of nutrients are mediated by soil microbial processes

Crop Production Technologies Peeyush Sharma,Vikas Abrol,2012-01-05 Crop production depends on the successful implementation of the soil water and nutrient management technologies Food production by the year 2020 needs to be increased by 50 percent more than the present levels to satisfy the needs of around 8 billion people Much of the increase would have to come from intensification of agricultural production Importance of wise usage of water nutrient management and tillage in the agricultural sector for sustaining agricultural growth and slowing down environmental degradation calls for urgent attention of researchers planners and policy makers Crop models enable researchers to promptly speculate on the long term consequences of changes in agricultural practices In addition cropping systems under different conditions are making it possible to identify the adaptations required to respond to changes This book adopts an interdisciplinary approach and contributes to this new vision Leading authors analyze topics related to crop production technologies The efforts have been made to keep the language as simple as possible keeping in mind the readers of different language origins The emphasis has been on general descriptions and principles of each topic technical details original research work and modeling aspects However the comprehensive journal references in each area should enable the reader to pursue further studies of special interest The subject has been presented through fifteen chapters to clearly specify different topics for convenience of the readers

Nutrient Dynamics for Sustainable Crop Production Ram Swaroop Meena,2019-09-06 The cropping system is one of the important components of sustainable agriculture since it provides more efficient nutrient cycling As such balanced fertilization must be based on the concept of sustainable crop production Feeding the rapidly growing world population using environmentally sustainable production systems is a major challenge especially in developing countries A number of studies have highlighted the fact that degradation of the world s cultivated soils is largely responsible for low and plateauing yields Soil is lost rapidly but only formed over millennia and this represents the greatest global threat to nutrient dynamics in agriculture This means that nutrient management is essential to provide food and nutritional security for current and future generations Nutrient dynamics and soil sustainability imply the maintenance of the desired ecological balance the enhancement and preservation of soil functions and the protection of biodiversity above and below ground Understanding the role of nutrient management as a tool for soil sustainability and nutritional security requires a holistic approach to a wide range of soil parameters biological physical and chemical to assess the soil functions

and nutrient dynamics of a crop management system within the desired timescale Further best nutrient management approaches are important to advance soil sustainability and food and nutritional security without compromising the soil quality and productive potential Sustainable management practices must allow environmentally and economically sustainable yields and restore soil health and sustainability This book presents soil management approaches that can provide a wide range of benefits including improved fertility with a focus on the importance of nutrient dynamics Discussing the broad impacts of nutrients cycling on the sustainability of soil and the cropping systems that it supports it also addresses nutrient application to allow environmentally and economically sustainable agroecosystems that restore soil health Arguing that balanced fertilization must be based on the concept of INM for a cropping system rather than a crop it provides a roadmap to nutrient management for sustainability This richly illustrated book features tables figures and photographs and includes extensive up to date references making it a valuable resource for policymakers and researchers as well as undergraduate and graduate students of Soil Science Agronomy Ecology and Environmental Sciences

D. Gupta, 2009-05-07 Agriculture is the main occupation in India and about 75% of its population depends directly or indirectly on agriculture for their livelihood It is the dominant sector that contributes 18% of the gross domestic product Thus agriculture is the foundation of the Indian economy The maximum share of Indian exports is also from the agriculture sector As the population of the country is increasing tremendously approximately at the rate of 19 million every year over the existing population of more than 1 billion approximately 1.18 billion the food grain production must necessarily be increased This can be done by increasing crop production to match the population growth rate of 2.2% per annum which is expected to stabilize at 1.53 billion around 2050 There is no doubt that the Green Revolution in India during the late 1960s brought self sufficiency in food grain production mainly through the increase in rice and wheat crop yields the two main crops of the country which play an important role from food security point of view However the excessive use of fertilizers and pesticides and the neglect of organic manures for these crops has resulted in the deterioration of physical chemical and biological health of the rice and wheat growing soils Owing to the deterioration of the health of these soils the productivity of the rice wheat cropping system has now either got reduced or in some places has become constant for the last decade **Essential Plant Nutrients** M. Naeem, Abid A. Ansari, Sarvajeet Singh Gill, 2017-08-07 This book explores the agricultural commercial and ecological future of plants in relation to mineral nutrition It covers various topics regarding the

role and importance of mineral nutrition in plants including essentiality availability applications as well as their management and control strategies Plants and plant products are increasingly important sources for the production of energy biofuels and biopolymers in order to replace the use of fossil fuels The maximum genetic potential of plants can be realized successfully with a balanced mineral nutrients supply This book explores efficient nutrient management strategies that tackle the over and under use of nutrients check different kinds of losses from the system and improve use efficiency of the plants Applied and basic aspects of ecophysiology biochemistry and biotechnology have been adequately incorporated including pharmaceuticals and nutraceuticals agronomical breeding and plant protection parameters propagation and nutrients managements This book will serve not only as an excellent reference material but also as a practical guide for readers cultivators students botanists entrepreneurs and farmers
