Popular Conceptions Of Mental Health:

Cultural Conceptions of Mental Health and Therapy Anthony J. Marsella, G. White, 2012-12-06 Within the past two decades there has been an increased interest in the study of culture and mental health relationships. This interest has extended across many academic and professional disciplines including anthropology, psychology, sociology, psychiatry, public health, and social work, and has resulted in many books and scientific papers emphasizing the role of sociocultural factors in the etiology, epidemiology, manifestation, and treatment of mental disorders. It is now evident that sociocultural variables are inextricably linked to all aspects of both normal and abnormal human behavior. But in spite of the massive accumulation of data regarding culture and mental health relationships, sociocultural factors have still not been incorporated into existing biological and psychological perspectives on mental disorder and therapy. Psychiatry, the Western medical specialty concerned with mental disorders, has for the most part continued to ignore socio-cultural factors in its theoretical and applied approaches to the problem. The major reason for this is psychiatry's continued commitment to a disease conception of mental disorder which assumes that mental disorders are largely biologically caused illnesses which are universally represented in etiology and manifestation. Within this perspective, mental disorders are regarded as caused by universal processes which lead to discrete and recognizable symptoms regardless of the culture in which they occur. However, this perspective is now the subject of growing criticism and debate.

Choosing Methods in Mental Health Research Mike Slade, Stefan Priebe, 2007-01-24 *Choosing Methods in Mental Health Research* develops a new framework for mental health research. It is concerned with how to choose the most appropriate mental health research method not only to address a specific question but to maximize the potential impact on shaping mental health care. Mike Slade and Stefan Priebe focus attention on the types of audience that the researcher is seeking to influence, the types of evidence each audience accepts as valid, and the relative strengths and limitations of each type of methodology. A range of research methodologies are described and critically appraised, and the use of evidence by different groups is discussed. This produces some important findings about the interplay between research production and consumption and highlights directions for future mental health research theory and practice. The findings presented here will be relevant to mental health service users and professionals who use research evidence to inform decision making. It will also prove an invaluable resource for students and researchers in the field of
