Katz, 2001-08-21 The presentation is consistently excellent One the writing is lucid and organized in a way that should be very natural for the clinical reader Two the text requires no background in mathematics and uses a minimum of symbols And three the methodological concepts and clinical issues are well integrated through a number of carefully prepared and comprehensive examples Greg Samsa Associate Director Duke Center for Clinical Health Policy Research If a patient is older or younger than sicker or healthier than taller or shorter than or simply different from the subjects of a study do the results pertain Clinical Epidemiology Evidence based Medicine is a resource for all health care workers involved in applying evidence to the care of their patients Using clinical examples and citing liberally from the peer reviewed literature the book shows how statistical principles can improve medical decisions Plus as Katz shows how probability risk and alternatives are fundamental considerations in all clinical decisions he demonstrates the intuitive basis for using clinical epidemiology as a science underlying medical decisions After reading this text the practitioner should be better able to access interpret and apply evidence to patient care as well as better understand and control the process of medical decision making

The Medical School's Mission and the Population's Health

Kerr L. White, Julia E. Connelly, 2012-12-06 Medical schools exist as part of a complex educational and health care system with affiliations to

universities teaching hospitals outpatient clinics students and communities Those of us who serve as trustees and volunteers on boards and committees of medical schools carry obvious responsibilities for the performance of the institution with regard to those affiliations including those that relate to the community By what criteria and by what standards do we as trustees assess that performance For trustees of medical schools I suggest that the most important criteria are those concerned with the purpose for which the school was originally established and those that relate to the community that supports it and is served by it For a medical school performance criteria should be defined in a statement of purpose the mission of the school This mission statement should provide trustees with direction on such vital matters as the following What does the medical school seek to accomplish Whom does it serve Where is it going What is the relationship to the geographic region or other community that it may seek to serve Such questions are stated more easily than they are answered but they should be asked For trustees who are responsible for the education of students the management of faculty and the stewardship of funds they are a matter of serious concern

Drawing on the work of the Roundtable on Evidence Based Medicine the 2007 IOM Annual Meeting assessed some of the rapidly occurring changes in health care related to new diagnostic and treatment tools emerging genetic insights the

developments in information technology and healthcare costs and discussed the need for a stronger focus on evidence to ensure that the promise of scientific discovery and technological innovation is efficiently captured to provide the right care for the right patient at the right time As new discoveries continue to expand the universe of medical interventions treatments and methods of care the need for a more systematic approach to evidence development and application becomes increasingly critical Without better information about the effectiveness of different treatment options the resulting uncertainty can lead to the delivery of services that may be unnecessary unproven or even harmful Improving the evidence base for medicine holds great potential to increase the quality and efficiency of medical care The Annual Meeting held on October 8 2007 brought together many of the nation s leading authorities on various aspects of the issues both challenges and opportunities to present their perspectives and engage in discussion with the IOM membership

Uncertainty and Explanation in Medicine and the Health Sciences Olaf Dammann,2025-03-27 This book offers a comprehensive account of how uncertainty is tackled in medicine and the health sciences Olaf Dammann explores recent accounts of medicine as ineffective and suggests that the impression that medicine does not achieve its goal is at least in part due to the aleatoric natural uncertainty of biomedical processes and the subsequent epistemic cognitive uncertainty of those who desire solid information about such processes Dammann shows how concepts like inference explanation and causometry help mitigate this disconnect He points toward the possibility that some of the statistically rigid and formalized approaches such as the randomized controlled trial as the gold standard for the justification of medical interventions might better be replaced by approaches that emphasize the coherence of evidence and the people s needs for helpful health interventions auxiliarianism **Foundations of Evidence-Based Medicine** Milos Jenicek,2019-09-19

Medicine in Asia Shirley Sun, 2016-07-01 The second decade of the twenty first century has witnessed a surging interest in personalized medicine with the concomitant promise to enable more precise diagnosis and treatment of disease and illness

based upon an individual's unique genetic makeup. In this book, my goal is to contribute to a growing body of literature on personalized medicine by tracing and analyzing how this field has blossomed in Asia. In so doing, I aim to illustrate how various social and economic forces shape the co-production of science and social order in global contexts. This book shows that there are inextricable transnational linkages between developing and developed countries and also provides a theoretically guided and empirically grounded understanding of the formation and usage of particular racial and ethnic human taxonomies in local, national, and transnational settings.
