*Population Politics* Virginia Abernethy, Garrett Hardin, 2018-05-11 International efforts to regulate fertility rates so that populations do not grow beyond the earth's capacity have included technical assistance and capital improved health care conditions to lower the risk of infant mortality increased opportunities to develop literacy the democratization of governments and several decades of liberal immigration and refugee policies favoring third world nations The persistence of high fertility despite international efforts confounds demographers *Population Politics* brilliantly dissects the paradigm responsible for the counterproductive efforts of nations and international agencies Abernethy a renowned anthropologist shows why policies hamper the shift to lower fertility Ireland Indonesia Cuba China Turkey and Egypt are but a few of the countries Abernethy examines showing how economic sociocultural and agricultural factors that have caused population growth can be harnessed to stabilize population size *Population Politics* is a provocative examination of the influence of aid and liberal immigration policies on world population growth and often

counterproductive to the role of the United States as an industrial power This volume s uniquely interdisciplinary perspective will enlighten the lay reader as well as demographers and epidemiologists conservationists reproduction and family specialists agricultural economists and public health personnel Virginia D Abernethy is professor emeritus of psychiatry anthropology at Vanderbilt Medical School and was for 11 years the editor of the scholarly journal Population and Environment Garrett Hardin is emeritus professor of human ecology in the Department of Biological Sciences and the University of California Santa Barbara Population Politics and Development L. Richey,2008-01-21 This book uses political and socio anthropological theory to examine the relationship between power interest and agency within population and family planning discourse across Africa with particular emphasis on case studies from Tanzania *The Vanishing American Dream* Virginia Deane Abernethy,2017-09-08 The United States has gone off track allowing domestic and foreign aid policies to be co opted by a government abetted by mass media that serves special interests rather than the greater national good Americans tendencies to trust play fair and help have been abused and require replacement by a realistic outlook The Vanishing American Dream posits solutions to get America back on the right track Abernethy sees population growth driven by mass immigration as a major cause of economic and cultural changes that have been detrimental to most Americans The environment has been degraded by over crowding and increasing demands on natural resources Work is cheapened by explosive growth in the labour force creating a buyer s market One salary or wage no longer supports a family and educates children Women working outside the home is a necessity not a choice for most American families Furthermore feminism aimed originally at balanced gender roles has been turned viciously against males of all ages and ultimately against females through degrading their traditional and valuable contributions Abernethy proposes that Americans need time to regroup untroubled by a continuing influx of foreign peoples The family small business and responsive local government are centres around which a solvent and confident citizenry can prosper again *Introduction to Sustainability* Nolberto Munier,2006-01-05 Sustainability relates with Economics Society and Environment However one common fact that links them all is the generation of waste This chapter is divided into two The first part analyses the current generation of waste as well as its treatment The second intends to establish policies for the future treatment of waste or better yet for ceasing the generation of waste This first part begins by raising some capital questions What is waste Which are the components of waste Where is waste generated and How is waste treated The second part will deal with Why is waste produced and What is society doing to correct this problem 2 2 First part Current generation and treatment of waste 2 2 1 What is waste The dictionary defines waste as something useless unwanted or defective and the word by product as something produced in an industrial or biological process in addition to the principal product From the point of view of sustainability the word waste does not have that meaning as though it may be unwanted it is not something useless and is certainly not defective Even if in a manufacturing process a product or part of it does not conform to the manufacturer s quality specs it does not thereby

become waste but is rather scrap material that is usually brought back to its original state and then processed again

**The Metaphysics of Science** Craig Dilworth, 2007-10-04 The roots of this work lie in my earlier book Scientific Progress which first appeared in 1981 One of its topics the distinction between scientific laws and theories is there treated with reference to the same distinction as drawn by N R Campbell in his Physics The Elements Shortly after completing Scientific Progress I read Rom Harr's The Principles of Scientific Thinking in which the concept of theory is even more clearly delineated than in Campbell being directly connected to the notion of a model as it was in my book In subsequent considerations regarding science Harr's work thus came my main source of inspiration with regard to theories while Campbell's remained my main source with respect to empirical laws Around the same time I also read William Whewell's Philosophy of the Inductive Sciences In this work Whewell depicts principles as playing a central role in the formation of science and conceives of them in much the same way as Kant conceives of fundamental synthetic a priori judgements The idea that science should have principles as a basic element immediately made sense to me and from that

time I have thought of science in terms of laws theories and principles

**Faith, Family, and Filipino American Community Life** Stephen M. Cherry, 2014-01-03 Stephen M Cherry draws upon a rich set of ethnographic and survey data collected over a six year period to explore the roles that Catholicism and family play in shaping Filipino American community life From the planning and construction of community centers to volunteering at health fairs or protesting against abortion this book illustrates the powerful ways these forces structure and animate not only how first

generation Filipino Americans think and feel about their community but how they are compelled to engage it over issues deemed important to the sanctity of the family Revealing more than intimate accounts of Filipino American lives Cherry offers a glimpse of the often hidden but vital relationship between religion and community in the lives of new immigrants and allows speculation on the broader impact of Filipino immigration on the nation The Filipino American community is the second largest immigrant community in the United States and the Philippines is the second largest source of Catholic immigration to this country This ground breaking study outlines how first generation Filipino Americans have the potential to reshape American Catholicism and are already having an impact on American civic life through the engagement of their faith
