Population And Community In Rural America Contributions In American Studies:

Population and Community in Rural America Lorraine Garkovich, 1989-10-24 The American experience has been one of constant and accelerating change. Against this background, American cities have exerted a magnetic pull, attracting streams of migration from rural to urban areas, transforming a predominantly rural society into one in which 75 percent of the people live in urban areas. Population and Community in Rural America focuses on migration as the primary force for population change in rural America. Within smaller, more dispersed rural populations, any changes in the number of births or deaths or movement in or out of the area impact community and family structures. In the last half century, migration studies have been the single largest area of rural population research because the consequences of migration on both community population and socioeconomic structure are usually much greater than shifts in mortality and fertility. Garkovich argues that migration streams exert a cohesive force, binding American communities together, and that such in- and out-migrations have contributed to a national character based on intermingled rural and urban perspectives. She presents a thorough investigation of the nature of migration and its effect on other population processes and characteristics and explains why particular patterns of migration and population change have occurred at certain points in the historical development of rural America. The first two chapters describe various theoretical and methodological issues, review major social, economic, and political events of the three historical eras of rural population change, and consider the social environment within which the changes occurred. Chapters three through six detail rural population changes, including major migration streams and the factors and outcomes associated with or attributable to these movements. Chapter seven analyzes institutional forces that have effected both the study and interpretation of rural population change and offers provocative suggestions. A final chapter summarizes major changes in rural America, explains how migration continues to shape current rural populations, and identifies critical issues for future migration research. An important tool for students and scholars, this volume will also be of particular interest to those readers studying population migration and rural communities.

The Reader's Guide to American History is designed to meet that need by adopting a new and constructive approach to the appreciation of this rich historiography. Each of the 600 entries on topics in political, social, and economic history describes and evaluates some 6 to 12 books on the topic, providing guidance to the reader on everything from broad surveys and interpretive works to specialized monographs. The entries are devoted to events and individuals as well as broader themes and are written by a team of well over 200 contributors, all scholars of American history.

Community Series in Mental Illness, Culture, and Society:

Dealing with the COVID-19 Pandemic, volume VIII Mohammadreza Shalbafan, Samer El Hayek, Renato de Filippis, 2024-06-21 The COVID 19 outbreak has impacted many areas of our lives including mental health. Lockdown and physical distancing measures have been one major effective intervention to counter the spread of the virus and reduce the impact of the disease. However, they have negatively impacted mental well-being and behaviors, either triggering the onset of new psychiatric symptoms and diseases or amplifying pre-existing ones. The pandemic and lockdown measures have also been associated with reduced access to treatment and facilities all over the world, further worsening mental health outcomes. The impact on mental health, although universal, varied between nations. Cultural and societal variables, including norms, values, religion, and stigma, have played an important role in shaping COVID-19 related mental health symptoms, including anxiety, depression, grief, psychosis, and addiction. These sociocultural factors have also molded how mental health interventions are tailored and provided. Highlighting the intertwining relationship between the pandemic, mental health, and sociocultural factors are essential to managing emerging mental health symptoms adequately.
