Proceedings of the 2nd Conference on Engine Processes Sens, Marc, Baar, Roland, 2015-10-30 As the combustion engine looks set to remain the dominant energy conversion unit in vehicle powertrains in the medium term either in combination with electrical components or on its own attention will need to be paid to continue improving its efficiency in the future. The high development depth of today's combustion engines means that it is becoming increasingly difficult to achieve significant efficiency improvements by simple means. On the search for these improvements the focus has shifted to inner engine processes for instance charge cycles including the charging system the mixture formation including injection combustion and kinematic conversion of the energy within the fuel. Our 2nd conference Engine processes aims to offer all developers a platform to discuss the latest technological developments in the field of inner engine process control and encourage new paths to be taken. We believe that the program for this conference is a sound foundation for this endeavour. Da der Verbrennungsmotor auch mittelfristig die dominierende Energiewandlungseinheit im Antriebsstrang von Kraftfahrzeugen sein wird entweder im Verbund mit elektrischen Komponenten oder aber als alleiniger Antrieb muss der Verbesserung von dessen Wirkungsgrad auch in Zukunft erhebliche Aufmerksamkeit zu Teil werden. Aufgrund der hohen Entwicklungstiefe die heutige Verbrennungsmotoren aufweisen wird es immer schwerer deutliche Wirkungsgradverbesserungen auf einfachem Weg zu erreichen. Auf der Suche nach diesen Verbesserungen rücken die innermotorischen Prozesse immer mehr in den Fokus. Hierzu zählen der Ladungswechsel inkl. Aufladesystem die Gemischbildung inkl. Einspritzung die Verbrennung sowie die kinematische Wandlung der im Kraftstoff gebundenen Energie. Unsere 2. Tagung Motorische Prozesse soll nun allen Entwicklern als Austauschforum zu neuesten technologischen Entwicklungen auf dem Gebiet der innermotorischen Prozessführung dienen und dazu anregen neue Wege zu beschreiten. Wir sind überzeugt mit dem vorliegenden Tagungsprogramm hierzu einen sehr guten Beitrag leisten zu können. *Impingement Jet Cooling in Gas Turbines* R.S. Amano, B. **Vehicular Engine Design** Kevin Hoag, 2007-02-05 The mechanical engineering curriculum in most universities includes at least one elective course on the subject of reciprocating piston engines The majority of these courses today emphasize the application of thermodynamics to engine efficiency performance combustion and emissions There are several very good textbooks that support education in these aspects of engine development However in most companies engaged in engine development there are far more engineers working in the areas of design and mechanical development University studies should include opportunities that prepare engineers desiring to work in these aspects of engine development as well My colleagues and I have undertaken the development of a series of graduate courses in engine design and mechanical development In doing so it becomes quickly apparent that no suitable text book exists in support of such courses This book was written in the hopes of beginning to address the need for an engineering based introductory text in engine design and mechanical development It is of necessity an overview Its focus is limited to reciprocating piston internal combustion engines both diesel and spark ignition engines Emphasis is specifically on automobile engines although much of the discussion applies to larger and smaller engines as well A further intent of this book is to provide a concise reference volume on engine design and mechanical development processes for engineers serving the engine industry It is intended to provide basic information and most of the chapters include recent references to guide more in depth study
