**Structuring the Void** Jerome Klinkowitz, 1992 If as the literary theorists of postmodernism contend content does not exist then how can fiction continue to be written Jerome Klinkowitz himself a veteran practitioner and theorist of fiction addresses this question in *Structuring the Void* an account of what today's novelists and short story writers do when they produce a fictive work Klinkowitz focuses on the ways in which writers finding themselves in the same position as abstract painters and death of God theologians have turned their inquiry itself into subject matter and he shows how this approach has in recent years produced something more than mere metafictional self questioning With no subject to structure the writers Klinkowitz discusses nonetheless persist in the act of structuring For Kurt Vonnegut this has meant finding a form for an otherwise unrepresentable world by organizing his autobiography as a narrative device In the generation following Vonnegut Max Apple makes a similar move in the ritualization of a national history and popular culture while Gerald Rosen and Rob Swigart invent a style of literary comedy based on their comic response to a new imaginative state the state of California Klinkowitz also considers subjects that though they cannot be represented nevertheless exercise constraints on a writer's intention to structure In recent decades two of these pressing themes have been gender as seen here in the works of Grace Paley and war the Vietnam conflict itself as well as the struggles of two generations to come to terms with it *Structuring the void* left when content collapses these writers have as Klinkowitz demonstrates developed an entirely new style of fiction one that necessarily privileges space over time and self invention over representation

Management Concepts Methodologies Tools and Applications is an innovative reference source for the latest academic material in the field of information and communication technologies and explores how complex information systems interact with and affect one another Highlighting a range of topics such as knowledge discovery semantic web and information resources management this multi volume book is ideally designed for researchers developers managers strategic planners and advanced level students      Geocomputation with R Robin Lovelace,Jakub Nowosad,Jannes Muenchow,2025-05-23

Geocomputation with R is for people who want to analyze visualize and model geographic data with open source software The book provides a foundation for learning how to solve a wide range of geographic data analysis problems in a reproducible and therefore scientifically sound and scalable way The second edition features numerous updates including the adoption of the high performance terra package for all raster data processing detailed coverage of the spherical geometry engine s2 updated information on coordinate reference systems and new content on openEO STAC COG and gdalcubes The data visualization chapter has been revamped around version 4 of the tmap package providing a fresh perspective on creating publication quality maps from the command line The importance of the book is also highlighted in a new foreword by Edzer Pebesma The book equips you with the knowledge and skills necessary to tackle a wide range of issues manifested in geographic data including those with scientific societal and environmental implications The book is especially well suited to Data scientists and engineers interested in upskilling to handle spatial data People with existing geographic data skills interested in developing powerful geosolutions via code Anyone who needs to work with spatial data in a reproducible and scalable way The book is divided into three parts Foundations Extensions and Applications covering progressively more advanced topics The exercises at the end of each chapter provide the necessary skills to address various geospatial problems with solutions and supplementary materials available at [r geocomp.org/solutions](https://rgeocomp.org/solutions)      Science Fiction and Fantasy Book Review Index ,1987      **Advances in Computers** Marvin Zelkowitz,2005-06-14 Advances in Computers covers new developments in computer technology Most chapters present an overview of a current subfield within computer science with many citations and often include new developments in the field by the authors of the individual chapters Topics include hardware software theoretical underpinnings of computing and novel applications of computers This current volume emphasizes the role of the internet the world wide web and other aspects of a distributed computing environment Open source development as well as computing for the handicapped are additional important topics Key Features In depth surveys and tutorials on new computer technology Well known authors are researchers in the field Extensive bibliographies with most chapters Important chapters on new technologies for software development open source development and the technology needed to use the web for electronic commerce In depth surveys and tutorials on new computer technology Well known authors are researchers in the field Extensive bibliographies with most chapters Important chapters on new technologies for software development open source development and the technology needed to use the web for electronic

commerce      **Geocomputation with Python** Michael Dorman, Anita Graser, Jakub Nowosad, Robin Lovelace, 2025-02-14  
Geocomputation with Python is a comprehensive resource for working with geographic data with the most popular programming language in the world. The book gives an overview of Python's capabilities for spatial data analysis as well as dozens of worked-through examples covering the entire range of standard GIS operations. A unique selling point of the book is its cohesive and joined-up coverage of both vector and raster geographic data models and consistent learning curve. This book is an excellent starting point for those new to working with geographic data with Python, making it ideal for students and practitioners beginning their journey with Python. Key features: Showcases the integration of vector and raster datasets operations. Provides explanation of each line of code in the book to minimize surprises. Includes example datasets and meaningful operations to illustrate the applied nature of geographic research. Another unique feature is that this book is part of a wider community. Geocomputation with Python is a sister project of Geocomputation with R. Lovelace, Nowosad, and Muenchow 2019, a book on geographic data analysis, visualization, and modeling using the R programming language that has numerous contributors and an active community. The book teaches how to import, process, examine, transform, compute, and export spatial vector and raster datasets with Python, the most widely used language for data science and many other domains. Reading the book and running the reproducible code chunks within will make you a proficient user of key packages in the ecosystem, including *shapely*, *geopandas*, and *rasterio*. The book also demonstrates how to make use of dozens of additional packages for a wide range of tasks, from interactive map making to terrain modeling. Geocomputation with Python provides a firm foundation for more advanced topics, including spatial statistics, machine learning involving spatial data, and spatial network analysis, and a gateway into the vibrant and supportive community developing geographic tools in Python and beyond.

Web Engineering Tommi Mikkonen, Ralf Klamma, Juan Hernández, 2018-05-24. This book constitutes the refereed proceedings of the 18th International Conference on Web Engineering (ICWE 2018) held in Caceres, Spain, in June 2018. The 18 full research papers and 17 short papers presented together with 2 practice papers, 6 demonstration papers, and 5 tutorials were carefully reviewed and selected from 103 submissions. The papers cover research areas such as Web application modeling and engineering, Web infrastructures and architectures, execution models, human computation, and crowdsourcing applications, Web application composition and mashups, Social Web applications, Semantic Web applications, Web of Things applications, big data and data analytics, and security, privacy, and identity.
