

reflects a deep and affectionate understanding of the material, both as to form and appearance, and, in a broader sense, an appreciation of the environment by seeking and finding methods that do not violate the surroundings nor squander any part of the material.

Nearly all log and solid timber buildings in their original European domain were built in rural areas and, notwithstanding the essentially perishable nature of wood, were expected to last for many generations—and so they did. With minimal maintenance a large number of them have already attained an age of several hundred years. Unfortunately, much of contemporary thought and technology is crucially transforming the hitherto harmonious relationship between man and his environment even in relatively underdeveloped countries such as Romania, which until very recently was literally a treasure-trove of genuinely organic timber buildings, ranging from houses, barns, and dependencies to churches and windmills. The best specimens are being saved wherever and whenever possible but unfortunately far too few will survive. If it were not for outdoor museums such as the *Muzeul Satului* in Bucharest, an even greater number of prime specimens would be forever lost.

European log and solid timber construction was brought to America by colonists and settlers, beginning with seventeenth century Swedes in Delaware—or, quite possibly, in Pennsylvania by German Schwenkfelders from Bohemia, Moravia, and Silesia—and terminating in the Midwest, especially in Wisconsin, with the work of the immigrant Norwegians, Germans, Finns, Poles, Lithuanians, Bohemians, and even native Americans on the move during the nineteenth and early twentieth centuries. Americans moving westward readily adopted the log cabin based on European prototypes since solid log construction was no longer part of the cultural equipment of the Anglo-Saxon milieu. However, American work differed from that of continental European provenance in one very important respect. American buildings were usually not regarded as being permanent and were therefore often put together in the most expedient way.

There were several reasons for this point of view. First, the Americans arriving from the eastern sections of the country had often come from comfortable, well-built houses located in convenient, well-ordered communities. Secondly, if they decided to stop in Wisconsin, for example, it was by no means a foregone conclusion that they would not pull up stakes again and move still further west in a comparatively short while. However, if they did decide to stay in Wisconsin—and particularly if they prospered—a fine new house after the latest fashion ranked highest priority and the log cabin, impermanently regarded, became hogpen, chickencoop or toolshed. Some westward bound Americans, especially in the more southerly latitudes, did not move on but stayed in the hills of West Virginia, Tennessee, Kentucky, and southern Indiana, where some American-type log houses—but usually of better than average construction—and homesteads for several generations can still be seen and studied to good advantage.

In any event, it seems safe to say that no significant method of timber construction used before the early nineteenth century was developed in the United States. Techniques were modified to fit local conditions, but their Euro-

pean ancestry is certain. Approaching American timber construction and its antecedents as a geographer and anthropologist, Fred Kniffen of Louisiana State University, has painstakingly researched and traced the routes of diffusion from their source areas and in so doing was led into further investigative work with the assistance of Henry Glassie, at the time a doctoral candidate in folklore at the University of Pennsylvania. In one of their joint publications they assert that in assessing wood construction from a time-place perspective there must be a strong emphasis on folk practices because they are, comparatively, the simplest and most direct expression of fundamental needs and urges. Significantly, the authors share the concern common to all students of vernacular building that folk practices with respect to material things have been badly neglected in comparison with story telling, traditional music, dancing, and folklore. Simple folk methods and forms of construction have been largely disregarded with the net result being the accelerated destruction of unchronicled folk structures and practices to a point where their record is beyond recovery.

As already indicated, the great mobility of the American people was the primary, fundamental element in the diffusion of building types, moving westward both from earlier eastern American sources or directly from Europe itself. While log and solid timber work did, of course, extend west of the Mississippi, the treeless plains and prairies were not conducive to such construction and the still heavily forested Midwest was the last stronghold of traditional log construction to any significant degree. The very presence of these forests, coupled with highly fertile soil, constituted one of the greatest attractions for immigrants from northern and central Europe, particularly. In coming to Wisconsin they brought with them three general methods of building in wood: timber framing, walls of closely set vertical timbers, and walls of horizontal timbers. Thus we have half-timbering; clapboarding over heavy open frame; vertical log, paling, and plank construction; and walls of horizontal logs, planks, and timbers with various corner joinings.

Portland Review Literary Journal ,2005      **U.S. Army War College Guide to National Security Issues: Theory of war and strategy** J. Boone Bartholomees, Army War College (U.S.). Strategic Studies Institute, 2012 This edition of the U S Army War College Guide to National Security Policy and Strategy continues to reflect the structure and approach of the core national security strategy and policy curriculum at the War College The 5th Edition is published in two volumes that correspond roughly to the Department of National Security and Strategy s core courses Theory of War and Strategy and National Security Policy and Strategy Like previous editions this one is based on its predecessor but contains both updates and new scholarship Over a third of the chapters are new or have undergone significant rewrites Many chapters some of which appeared for years in this work have been removed Nevertheless the book remains unchanged in intent and purpose Although this is not primarily a textbook it does reflect both the method and manner we use to teach strategy formulation to America s future senior leaders The book is not a comprehensive or exhaustive treatment of either strategic theory or the policymaking process Both volumes are organized to proceed from the general to the specific Thus the first volume opens with general thoughts on the nature and theory of war and strategy proceeds to look at the complex aspect of power and concludes with specific theoretical issues Similarly the second volume begins by examining the policy strategy process moves to a look at the strategic environment and concludes with some specific issues This edition continues the effort begun in the 4th Edition to include several short case studies to illustrate the primary material in the volume      *Government Internet Censorship Measures and International Law* I-Ching Chen ,2018 Internet governance is a simple term without a simple definition In the name of Internet sovereignty nations have begun to implement various regulations to control the flow of information within or across their virtual territorial boundaries The unique interconnected and multilateral characteristics of the Internet renders it impossible for one nation alone to provide adequate solutions to managing the Internet The author argues that many of the issues related to Internet governance should be allocated to international institutions and a nation s sovereign power over the Internet should be bounded by its commitments and responsibilities under international law In the absence of a coherent regulatory framework this book examines whether the existing international legal systems are sufficiently generic to accommodate the challenges brought about by technological developments      **The U.S. Army War College Guide to National Security Issues: Theory of war and strategy** J. Boone Bartholomees, 2010 This edition of the U S Army War College Guide to National Security Policy and Strategy continues to reflect the structure and approach of the core national security strategy and policy curriculum at the War College The fourth edition is published in two volumes that correspond roughly to the Department of National Security and Strategy s core courses Theory of War and Strategy and National Security Policy and Strategy Like previous editions this one is largely an expansion of its predecessor rather than a major rewriting About a quarter of the chapters are new and several others have undergone significant rewrites or updates

However approximately half of the book remains unchanged Although this is not primarily a textbook it does reflect both the method and manner we use to teach strategy formulation to America s future senior leaders The book is not a comprehensive or exhaustive treatment of either strategic theory or the policymaking process Both volumes are organized to proceed from the general to the specific Thus the first volume opens with general thoughts on the nature and theory of war and strategy proceeds to look at the complex aspect of power and concludes with specific theoretical issues Similarly the second volume begins by examining the policy strategy process moves to a look at the strategic environment and concludes with some specific issues This edition adds several short case studies that can be used to illustrate the primary material in the volume
