*Revolutionizing the Sciences* Peter Dear,2001 From Copernicus who put the earth in orbit around the sun to Isaac Newton who gave the world universal gravitation the Scientific Revolution of the sixteenth and seventeenth centuries transformed the way that Europeans understood their world In this book Peter Dear offers an accessible introduction to the origins of modern science for both students and general readers Beginning with what was worth knowing in 1500 Dear takes the reader through natural philosophy humanism mathematics and experimentalism until he can describe what was worth knowing by the eighteenth century Along the way he discusses the key ideas individuals and social changes that constituted the Scientific Revolution For all of its economy and broad appeal *Revolutionizing the Sciences* never sacrifices sophistication of treatment Dear questions triumphal ideas of scientific progress unravels the connections between scientific knowledge and power over nature and distinguishes between the scientific renaissance that characterized the sixteenth century and the more fundamental revolution that occurred in the seventeenth This is an ideal textbook on the Scientific Revolution for courses on the history of science or the history of early modern Europe The text is chronologically arranged and fully covers both the sixteenth and seventeenth centuries standing alone as an up to date complete general introduction to the origins of modern science in Europe *Revolutionizing the Sciences* is the best available choice for teaching or learning about the developments that came to be called the Scientific Revolution

*Revolutionizing the Sciences* Peter Dear,2001 In this book Peter Dear offers an introduction to the origins of modern scientific thought and practice including a rich variety of illustrations a list of the chief dramatis personae and glossary of key terms and a detailed bibliography to lead the student further into the subject Jacket

**Revolutionizing the Sciences** Peter Dear,2018-11-10 This heavily revised third edition of an award winning text offers a keen insight into the development of scientific thought in early modern Europe Including coverage of the central scientific figures of the time including Copernicus Kelper Galileo Newton and Bacon this book provides a comprehensive overview of how the Scientific Revolution happened and why Highlighting Europe s colonial and trade expansion in the sixteenth and 17th centuries Peter Dear traces the revolution in scientific thought that changed the natural world from something to be contemplated into something to be

used This book is ideal for undergraduate and postgraduate students of Early Modern history European history history of medicine history of science and technology and the history and philosophy of science The first edition was the winner of the Watson Davis and Helen Miles Davis Prize of the History of Science Society New to this Edition Greater treatment of alchemy and associated craft activities to reflect ongoing new scholarship More focus on geographical issues especially relating to Spain and its New World territories as well as Eastern Europe but also further afield in Islamic territories including the Ottoman Empire and South and East Asia New material on the themes of science and religion gender and class More extensive treatment of the relationship in this period of medicine to the various sciences and especially to new natural philosophies Incorporation of new scholarship throughout A whole chapter dedicated to Francis Bacon Further discussion of the gendered elements of natural philosophy A brand new historiographical essay *Revolutionizing the Sciences* Peter Dear,2019-02-12 This thoroughly revised third edition of an award winning book offers a keen insight into how the Scientific Revolution happened and why Covering central scientific figures including Copernicus Kepler Galileo Newton and Bacon this new edition features Greater treatment of alchemy and associated craft activities to reflect trends in current scholarship Extended material on Francis Bacon A new historiographical essay Reflecting on the origins of scientific practice in early modern Europe Peter Dear traces the revolution in thought that changed the natural world from something to be contemplated into something to be used Concise and readable this book is ideal for students who are studying the Scientific Revolution and its impact on the early modern world The first edition was the winner of the Watson Davis and Helen Miles Davis Prize of the History of Science Society **Scientific Practices in European History, 1200-1800** Peter Dear,2017-07-28 Scientific Practices in European History 1200 1800 presents and situates a collection of extracts from both widely known texts by such figures as Copernicus Newton and Lavoisier and lesser known but significant items all chosen to provide a perspective on topics in social cultural and intellectual history and to illuminate the concerns of the early modern period The selection of extracts highlights the emerging technical preoccupations of this period while the accompanying introductions and annotations make these occasionally complex works accessible to students and non specialists The book follows a largely chronological sequence and helps to locate scientific ideas and practices within broader European history The primary source materials in this collection stand alone as texts in themselves but in illustrating the scientific components of early modern societies they also make this book ideal for teachers and students of European history **Herbert A. Simon** Hunter Crowther-Heyck,2005-04-27 In this informed and discerning study Crowther Heyck explores Simon s contributions to science and their influences on modern life and thought For historians of science social science technology and twentieth century American intellectual and cultural history this account of Herbert Simon s life and work provides a rich and valuable perspective Rarely does the world see as versatile a figure as Herbert Simon He was a Nobel laureate in economics an accomplished political scientist winner of a lifetime achievement award from the American Psychological

Association and founder of the department of computer science at Carnegie Mellon University In all his work in all these fields he pursued a single goal to create a science that could map the bounds of human reason and so enlarge its role in human affairs Hunter Crowther Heyck uses the career of this unique individual to examine the evolution of the social sciences after World War II particularly Simon's creation of a new field systems science which joined together two distinct powerful approaches to human behavior the sciences of choice and control Simon sought to develop methods by which human behavior specifically human problem solving could be modeled and simulated Regarding mind and machine as synonymous Simon applied his models of human behavior to many other areas from public administration and business management to artificial intelligence and the design of complex social and technical systems In this informed and discerning study Crowther Heyck explores Simon's contributions to science and their influences on modern life and thought *The Experimental Imagination* Tita Chico, 2018-06-05 Challenging the two cultures debate *The Experimental Imagination* tells the story of how literariness came to be distinguished from its epistemological sibling science as a source of truth about the natural and social worlds in the British Enlightenment Tita Chico shows that early science relied on what she calls literary knowledge to present its experimental findings More radically she contends that science was made intellectually possible because its main discoveries and technologies could be articulated in literary terms While early scientists deployed metaphor to describe the phenomena they defined and imagination to cast themselves as experimentalists literary writers used scientific metaphors to make the case for the epistemological superiority of literary knowledge Drawing on literature as well as literary language tropes and interpretive methods literary knowledge challenges our dominant narrative of the scientific revolution as the sine qua non of epistemological innovation in the British Enlightenment With its recourse to imagination as a more reliable source of truth than any empirical account literary knowledge facilitates a redefinition of authority and evidence as well as of the self and society implicitly articulating the difference that would come to distinguish the arts and sciences *Minds in Motion* Anne M. Thell, 2017-08-31 The central claim of *Minds in Motion* is that British travel writing of the long eighteenth century functions as an epistemological playing field where authors test empiricist models of engagement with the world while simultaneously seeking out the role of the self and the imagination in producing knowledge Whether exploring the relationship between the senses and the mind the narrative viability of experimental detachment or the literary dynamics of virtual witnessing eighteenth century travel authors persistently confront their positionality and raise difficult questions about the nature and value of first hand experience In one way or another they also complicate empiricist ideals by exploring the limits of individual perception and the role of the imagination in generating and relating knowledge While the genre is often viewed as either numbingly documentary or non literary and commercial travel literature actually operates at the front line of the period's intellectual developments illustrating both how individual writers grapple with philosophical ideals and how these ideals filter into the lives of ordinary people Indeed travel literature directly engages

the scientific and philosophical concerns of the period while it is also widely avidly read as such it offers models for cognitive and rhetorical practices that are evaluated and either embraced or rejected by readers in a process of identification not unlike that which occurs in early English fiction Moreover because eighteenth century travel literature is so crucial to the development of so many fields from botany to the novel it illustrates vividly the divisive energies of discipline and genre formation while also archiving the shared aims and methods of what will become discrete fields of study Travelogues as diverse as Margaret Cavendish's *Blazing World* 1666 and Samuel Johnson's *Journey to the Western Islands of Scotland* 1775 reveal the epistemological circuitry of the eighteenth century and historicize the absorption of the philosophical tendencies that have come to define modernity

*Biblical Scholarship, Science and Politics in Early Modern England* Kevin Killeen, 2016-12-05 Kevin Killeen addresses one of the most enigmatic of seventeenth century writers Thomas Browne 1605-1682 whose voracious intellectual pursuits provide an unparalleled insight into how early modern scholarly culture understood the relations between its disciplines Browne's work encompasses biblical commentary historiography natural history classical philology artistic propriety and an encyclopaedic coverage of natural philosophy This book traces the intellectual climate in which such disparate interests could cohere locating Browne within the cultural and political matrices of his time While Browne is most frequently remembered for the magnificence of his prose and his temperamental poise qualities that knit well with the picture of a detached apolitical figure this work argues that Browne's significance emerges most fully in the context of contemporary battles over interpretative authority within the intricately linked fields of biblical exegesis scientific thought and politics Killeen's work centres on a reassessment of the scope and importance of Browne's most elaborate text *Pseudodoxia Epidemica* his vast encyclopaedia of error with its mazy series of investigations and through this explores the multivalent nature of early modern enquiry

[Maximilian Hell \(1720–92\) and the Ends of Jesuit Science in Enlightenment Europe](#) Per Pippin Aspaas, László Kontler, 2019-12-02 The Viennese Jesuit court astronomer Maximilian Hell was a key figure in the eighteenth century circulation of knowledge He was already famous by the time of his celebrated 1769 expedition for the observation of the transit of Venus in northern Scandinavia However the 1773 suppression of his order forced Hell to develop ingenious strategies of accommodation to changing international and domestic circumstances Through a study of his career in local regional imperial and global contexts this book sheds new light on the complex relationship between the Enlightenment Catholicism administrative and academic reform in the Habsburg monarchy and the practices and ends of cultivating science in the Republic of Letters around the end of the first era of the Society of Jesus

*Science and Empire in the Atlantic World* James Delbourgo, Nicholas Dew, 2008-09-25 *Science and Empire in the Atlantic World* is the first book in the growing field of Atlantic Studies to examine the production of scientific knowledge in the Atlantic world from a comparative and international perspective Rather than focusing on a specific scientific field or single national context this collection captures the multiplicity of practices people languages and agendas that characterized the

traffic in knowledge around the Atlantic world linking this knowledge to the social processes fundamental to colonialism such as travel trade ethnography and slavery

**Bede and the Cosmos** Eoghan Ahern, 2020-05-26 Bede and the Cosmos examines Bede s cosmology his understanding of the universe and its laws It explores his ideas regarding both the structure and mechanics of the created world and the relationship of that world to its Creator Beginning with On the Nature of Things and moving on to survey his writings in other genres it demonstrates the key role that natural philosophy played in shaping Bede s worldview and explores the ramifications that this had on his cultural theological and historical thought From questions about angelic bodies and the destruction of the world at judgement day to subtle arguments about free will and the meaning of history Bede s fascinating and unique engagement with the natural world is explored in this comprehensive study

**Women, Imagination and the Search for Truth in Early Modern France** Rebecca M. Wilkin, 2016-12-05 Grounded in medical juridical and philosophical texts of sixteenth and seventeenth century France this innovative study tells the story of how the idea of woman contributed to the emergence of modern science Rebecca Wilkin focuses on the contradictory representations of women from roughly the middle of the sixteenth century to the middle of the seventeenth and depicts this period as one

filled with epistemological anxiety and experimentation She shows how skeptics including Montaigne Marie de Gournay and Agrippa von Nettesheim subverted gender hierarchies and or blurred gender difference as a means of questioning the human capacity to find truth while positivists who strove to establish new standards of truth for example Johann Weyer Jean Bodin and Guillaume du Vair excluded women from the search for truth The book constitutes a reevaluation of the legacy of Cartesianism for women as Wilkin argues that Descartes opening of the search for truth even to women was part of his appropriation of skeptical arguments This book challenges scholars to revise deeply held notions regarding the place of women in the early modern search for truth their role in the development of rational thought and the way in which intellectuals of the period dealt with the emergence of an influential female public
