Reward System In British And American Science:

The Reward System in British and American Science Jerry Gaston,1978 **The Reward System in British and American Science** Jerry Gaston,1978 **The Intellectual and Social Organization of the Sciences** Richard Whitley,2000 In a rapidly changing and inter disciplinary world it is important to understand the nature and generation of knowledge and its social organization Increasing attention is paid in the social sciences and management studies to the constitution and claims of different theories perspectives and paradigms This book is one of the most respected and robust analyses of these issues For this new paperback edition Richard Whitley a leading figure in European business education has written a new introduction which addresses the particular epistemological issues presented by management and business studies He approaches the sciences as differently organized systems for the production and validation of knowledge systems which become established in particular contexts and which generate different sorts of knowledge He identifies seven major types of scientific field and discusses the establishment and growth of these sciences including the major consequences of the nineteenth century expansion of employment opportunities for researchers the competitive pursuit of public reputations and the domination of intellectual work by employees He also examines the divergences in the way research is organized and controlled both in different fields and in the same field within different historical circumstances This book will be of interest to all graduate students concerned with the social study of knowledge science technology and the history and philosophy of science **Studies of Scientific Disciplines** Diane Weisz,1982 **The Transformation of University Institutional and Organizational Boundaries** Emilia Primeri,Emanuela Reale,2015-11-02 An emerging issue in higher education studies is that of boundaries crossing This is the main topic of the book The transformation of University institutional and organizational boundaries Several signals of shifting boundaries can be envisaged in higher education and research institutions which could be glimpsed through organizations the institutions and changes to the academic profession That of boundaries crossing in Higher Education is a complex and heterogeneous issue which characterizes scientific knowledge today and represents a key issue when looking at University transformations across contexts and policies instruments and practices The analysis of boundaries supplies interpretative frameworks for the interactions between the development of professions and disciplines as well as the relationships of the science with various parts of society such as state professionals and the market Fuelling further the discussion on HEIs transformations allows capturing changes in the function objectives and scope of higher education and research institutions the move beyond sectoral and disciplinary boundaries and the increasingly blurred boundaries of academic professions and of scientific work Public policies and HE reforms can push or impede the mentioned transformations but they can also derive from individual likelihood of moving in blurring spaces or from the transformations of the epistemic communities and the emergence of new fields and sectors Hence changes are there open to our observations *Determinants of Productivity in Indian Science* A. V. S. Kamesh,2010-04-16 This book is

an organizational study of the social aspects of science in India focusing on the determinants of productivity of Indian scientists The book describes the factors of productivity levels of organic chemists in India in the context of transformation from academic science to post academic science and more so entrepreneurial science This book considers new factors such as communication technology as an enabling tool to enhance the productivity levels of scientists and indicates how the different access to the same could lead to reinforce social inequality in the sphere of Indian science The present empirical work is an outcome of a study of Indian scientists based on both quantitative and qualitative methods This book provides an estimation of the relative contribution of determinants of productivity of organic chemists across different levels of organization in the Indian context and examines their consequences upon the career pattern of scientists The findings of this study are policy oriented suggestions aimed at ensuring social equality among scientists in India **Handbook of**

Bibliometric Indicators Roberto Todeschini,Alberto Baccini,2016-05-04 At last the first systematic guide to the growing jungle of citation indices and other bibliometric indicators Written with the aim of providing a complete and unbiased overview of all available statistical measures for scientific productivity the core of this reference is an alphabetical dictionary of indices and other algorithms used to evaluate the importance and impact of researchers and their institutions In 150 major articles the authors describe all indices in strictly mathematical terms without passing judgement on their relative merit From widely used measures such as the journal impact factor or the h index to highly specialized indices all indicators currently in use in the sciences and humanities are described and their application explained The introductory section and the appendix contain a wealth of valuable supporting information on data sources tools and techniques for bibliometric and scientometric analysis for individual researchers as well as their funders and publishers **Problems and Solutions in**

Human Assessment Richard D. Goffin,Edward Helmes,2012-12-06 The assessment of individual differences has generated shockwaves affecting sociology education and a number of other behavioral sciences as well as the fields of management and organizational behavior In covering the assessment of individual differences this book pays tribute to the interests and activities that Douglas N Jackson has incorporated into his career as a psychologist He continues to be a leader in putting academic findings to practical use He has also inspired generations of students with his mastery of complex concepts and as a personal example of the ability to balance several simultaneous areas of research Consistent with the focus of Jackson s research the theme of this book will be how the use of deductive construct driven strategies in the assessment of individual differences leads to benefits in terms of the applicability of the assessment instruments and the clarity of the conclusions that can be drawn from the research **Drifting Continents and Colliding Paradigms** John A. Stewart,1990-05-22 The book

provides an excellent historical summary of the debates over continental drift theory in this century Contemporary Sociology This is a useful discussion of the way that science works The book will be of value to philosophers of science Choice will find an important place in university and department libraries and will interest aficionados of the factual and intellectual history

of the earth sciences Terra Nova an excellent core analysis The Times Higher Education Supplement an ambitious and important contribution to the new sociology of science American Journal of Sociology Stewart's book is a noble effort an interesting and readable discussion and another higher notch on the scoreboard of critical scholarship that deserves wide examination and close attention Geophysics This fascinating book describes the rise and fall and rebirth of continental drift theory in this century It uses the recent revolution in geoscientists' beliefs about the earth to examine questions such as How does scientific knowledge develop and change The book also explores how well different perspectives help us to understand revolutionary change in science

Constructing the Social System Bernard Barber, 2021-10-29 Barber constructs a provisional generalized substantive theory of the social system which he uses as the starting point and focus of his specialized researches In this collection of his major writings in social system theory Barber shows how he has used and developed such a framework over the last fifty years and demonstrates the application of it

New Technology in Sociology Grant Blank, James L. McCartney, Edward Brent, 2019-12-06 When technology has been applied in business environments its justification has usually been cast in terms of saving time or saving money In the social sciences the justification must be different the viability of sociology as a profession for example will not be enhanced by cost reductions The focus in this volume is on a different bottom line

China's Scientific Elite Cong Cao, 2004-07-31 China's Scientific Elite is a study of those scientists holding China's highest academic honour membership of the Chinese Academy of Sciences Having carried out extensive systematic data collection of CAS members Cao examines the social stratification system of the Chinese science community and the way in which politics and political interference has effected the stratification The book then goes on to compare the Chinese system to the stratification of the US scientific elite The conclusions are fascinating not least because one national elite resides in a democratic liberal social system and the other in an authoritarian social system

New Frontiers in Socialization Richard A. Settersten Jr., Timothy J Owens, 2002-06-21 New Frontiers in Socialization

Determinants and Controls of Scientific Development Karin Knorr-Cetina, H. Strasser, H.G. Zilian, 1975-12-31 This book constitutes the outcome of an international conference held at the Otto Mobes Volkswirtschaftsschule Graz Stifting Austria from June 16 to 22 1974 The conference was initiated by a project group working on determinants and controls of social science development at the Institute for Advanced Studies and Scientific Research in Vienna and organized by the editors of this volume It was held under the auspices of the Austrian Ministry of Science and Research The main topics of the conference were those at the forefront of the state of argumentation to borrow from one of our contributors in philosophy and sociology of science ever since the controversy between Thomas S Kuhn and Sir Karl R Popper has sharpened our awareness for the methodological and substantial presuppositions involved with questions of growth and development in science Let us give two examples of those topics The borderline between sociology of science and philosophy of science has become more and more unclear while the work of at least some philosophers of science comes to have an empirical flavour

sociologists of science are increasingly apt to include logical and methodological components of the research process as their objects of examination. Papers included in this volume testify to both tendencies.

The Sociology of Science Robert K. Merton, 1973. The exploration of the social conditions that facilitate or retard the search for scientific knowledge has been the major theme of Robert K. Merton's work for forty years. This collection of papers is a fascinating overview of this sustained inquiry. There are very few other books in sociology with such meticulous scholarship or so elegant a style. This collection of papers is and is likely to remain for a long time one of the most important books in sociology. Joseph Ben David, New York Times Book Review. The novelty of the approach, the erudition and elegance and the unusual breadth of vision make this volume one of the most important contributions to sociology in general and to the sociology of science in particular. Merton's Sociology of Science is a magisterial summary of the field. Yehuda Elkana, American Journal of Sociology. Merton's work provides a rich feast for any scientist concerned for a genuine understanding of his own professional self. And Merton's industry, integrity and humility are permanent witnesses to that ethos which he has done so much to define and support. J. R. Ravetz, American Scientist. The essays not only exhibit a diverse and penetrating analysis and a deal of historical and contemporary examples with concrete numerical data but also make genuinely good reading because of the wit, the liveliness and the rich learning with which Merton writes. Philip Morrison, Scientific American. Merton's impact on sociology as a whole has been large and his impact on the sociology of science has been so momentous that the title of the book is apt because Merton's writings represent modern sociology of science more than any other single writer. Richard McClintock, Contemporary Sociology.

The Stars Are Not Enough Joseph C. Hermanowicz, 1998-10-15. Based on sixty interviews with physicists at universities across the United States, The Stars are Not Enough offers a detailed and intimate account of the worlds in which scientists work. Joseph C. Hermanowicz looks at a range of scientists from young graduate students to older professionals well into their careers. The result is a colorful portrait of a profession and its diverse cast of characters. These deeply personal narratives reveal dreams of fame and glory in which scientists confess their ambitions of becoming the next Newton or Einstein. However, these scientists also discuss the meaning of success and failure. We hear their stories of aspiration and anxiety, disappointment and tragedy, hope and achievement; we are privy to their doubts and to what they consider to be their limitations and weaknesses. As the scientists age in their professions, the specter of failure often visits them and they have to accept something less than scientific immortality or even the Nobel Prize. Ultimately, these stories give us more than an inside look at the details of careers in science; they also examine ambition by uncovering the forces that drive people in their professions and by describing how these forces persist or fade over time. Ambition for greatness often ignites a career and often sustains it. Yet as Hermanowicz's study reveals, greatness eludes nearly all people in their heroic quests for extraordinary achievement. The Stars Are Not Enough offers a fascinating account that will appeal to anyone interested in how people's dreams blossom and evolve.

the Limits of the Market R. Keat, 2000-09-19 In *Cultural Goods and the Limits of the Market* Russell Keat presents a theoretical challenge to recent extensions of the market domain and the introduction of commercially modelled forms of organization in areas such as broadcasting the arts and academic research Drawing on Walzer's pluralistic conception of social goods and MacIntyre's account of social practices he argues that cultural activities of this kind and the institutions within which they are conducted can best make their distinctive contributions to human well being when protected from the damaging effects of an unbounded market Robert K Merton & Contemp Robert King Merton, Carlo Mongardini, Simonetta Tabboni, This volume offers scholars of sociology and allied areas the fruits of an international conference on the contributions of the eminent Robert K Merton The assessment as good in content as well as in participants took place in Amalfi Italy with the participation of Merton himself and under the auspices of the Italian Sociology Association
