Handbook of Automation Shimon Y. Nof, 2009-07-16 Automation is undergoing a major transformation in scope and dimension and plays an increasingly important role in the global economy and in our daily lives Engineers combine automated devices with mathematical and organizational tools to create complex systems for a rapidly expanding range of applications and human activities This handbook incorporates these new developments and presents a widespread and well structured conglomeration of new emerging application areas of automation Besides manufacturing as a primary application of automation the handbook contains new application areas such as medical systems and health transportation security and maintenance service construction and retail as well as production or logistics This Springer Handbook is not only an ideal resource for automation experts but also for people new to this expanding field such as engineers medical doctors computer scientists designers It is edited by an internationally renowned and experienced expert **Understanding Autonomous Cooperation and Control in Logistics** Michael Hülsmann, Katja Windt, 2007-06-30 One of the great challenges in flexible production and supply chains is the availability of necessary information at any time and any place As a result of increasing dynamical and structural complexity of structures and processes in production it is often impossible to make all necessary information available to a central instance in real time and to perform appropriate measures of control in terms of a defined target system A fast and flexible adaptation to changing basic conditions ought to be achieved by establishing autonomous logistics processes In this context several fundamental questions concerning autonomous cooperating logistics processes were investigated The identification problem What are autonomous logistics processes and how do they differ from conventionally managed processes The description problem Which changes will autonomy cause in order processing One of the first results is a definition for the term autonomy for applications in engineering science The constituent characteristics of this definition were considered within the development of the catalogue of criteria in order to describe autonomous logistic processes Regarding the modelling of autonomous processes first requirements for modelling methods were specified To

validate the research results a production logistic shop floor scenario and a practical scenario based on the real business processes of an automobile terminal were developed Simulation studies concerning autonomously controlled allocation of parking areas document comprehensive opportunities for improvement *Global RFID* Edmund W. Schuster, Stuart J. Allen, David L. Brock, 2007-01-25 At the same time I was a junior Brand Manager at Procter Gamble worried about a much more mundane problem how to keep my products on the shelf Embedding RFID tags in the products and RFID readers in the shelf seemed like the perfect indeed the only way to do this But I needed RFID to be cheaper better and standardized in an open system In early 1999 by sheer chance I met Brock and Sarma The result was a potent meeting of minds I was looking to fund research and Brock Sarma and Siu were looking for research funding Working with Alan Haberman of the Uniform Code Council one of the founding fathers of the UPC bar code and Allan Boath of the Gillette Company we developed a plan for a new industry funded research consortium at MIT Haberman wanted to call it the Center For Automatic Identification And Data Capture At the last minute I persuaded him to abbreviate it to the Auto ID Center But my luck with names is hit and miss inspired by the bar code I had the bad idea of calling Auto ID Center's technology UPC2 Brock and Sarma saved the day one of them I cannot remember which proposed a far better alternative EPC for electronic product code The Auto ID Center opened on October 1 1999 P G loaned me to MIT to act as Executive Director and Sunny Siu was the first Research Director

The Internet of Things Christian Floerkemeier, Marc Langheinrich, Elgar Fleisch, Friedemann Mattern, Sanjay E. Sarma, 2008-03-15 This volume contains the proceedings of the Internet of Things IOT Conference 2008 the first international conference of its kind The conference took place in Zurich Switzerland March 26-28 2008 The term Internet of Things has come to describe a number of technologies and research disciplines that enable the Internet to reach out into the real world of physical objects Technologies such as RFID short range wireless communications real time localization and sensor networks are becoming increasingly common bringing the Internet of Things into industrial commercial and domestic use IOT 2008 brought together leading researchers and practitioners from both academia and industry to facilitate the sharing of ideas applications and research results IOT 2008 attracted 92 high quality submissions from which the technical program committee accepted 23 papers resulting in a competitive 25% acceptance rate In total there were over 250 individual authors from 23 countries representing both academic and industrial organizations Papers were selected solely on the quality of their blind peer reviews We were fortunate to draw on the combined experience of our 59 program committee members coming from the most prestigious universities and research labs in Europe North America Asia and Australia Program committee members were aided by no less than 63 external reviewers in this rigorous process in which each committee member wrote about 6 reviews The total of 336 entered reviews resulted in an average of 3.7 reviews per paper or slightly more than 1000 words of feedback for each paper submitted World Sustainable Development Outlook 2007 Allam Ahmed, 2017-09-29 The World Sustainable Development Outlook series has been developed to provide an overview of sustainable development to

discuss why it is important and to provoke forward thinking on the development of a more coherent approach to solving global problems related to sustainability through science and technology. In doing so a holistic approach is used to critically examine the interrelationship between the natural governmental economic and social dimensions of our world and how science and technology can contribute to solutions. This is a truly global source book which is reflected in the varied national and cultural origins of the contributors as well as the topics and case studies covered. Each year a different theme will be covered. The theme of World Sustainable Development Outlook 2007 is the different dimensions of knowledge and technology management in the new era of information revolution and how they relate to sustainable development. Rapid innovation in information and communication technologies (ICTs) is clearly reshaping the world we live in. Countries are increasingly judged by whether they are information rich or information poor. It is estimated that 30-40% of the world's economic growth and 40-50% of all new jobs will be IT driven. Education and knowledge are the chief currencies of the modern age and can also be a strategic resource and a lifeline for sustainable development. Yet in Africa millions of people have never made a telephone call. The technological gap between developed and developing countries (DCs) is likely to widen further with the rapid expansion of the internet and the speedy transition to digitalisation in the West. The impacts on DCs may include an increase in the so-called brain drain and growing dependence on foreign aid of a different kind: knowledge aid. There are fears that knowledge imperialism is already with us. What is clear is that most of the technological innovations in ICTs are Western designed and fail to address the needs of the most disadvantaged. The interest of industrialised countries in the use of ICTs in DCs has largely been more concerned with the profitability of their own business enterprises than with any broader goals concerning the development of the host countries. DCs face the challenge of either becoming an integral part of the knowledge-based global economy or the very real danger of finding themselves on the wrong side of the digital divide. Successful management in the new millennium requires developing new methods and approaches to meet the challenges and opportunities of this information revolution while at the same time fostering sustainable development. Adopting a holistic approach this book aims to critically examine the interrelationship between these different issues in order to reach solutions and a consensus for a better future taking into account a variety of international institutional and intellectual perspectives. It uses case and country studies in technological innovation and experience so that lessons in effective management of ICTs can be learned from successful initiatives, ideas and innovations.
