Moore, 2015-10-02 Autoimmune Disease AD refers to any of a number of disorders caused by an immune system defect that allows the body to attack its own tissues Some say 20 percent of the population is susceptible to Autoimmune Disease According to current theory individuals who develop AD do so because they are exposed to certain environmental triggers

This work is a comprehensive resource for patients with autoimmune disease. The primary focus is on the specific environmental factors including heavy metals, hormones, organic solvents, medications, and infectious agents that lead to autoimmune disease and that make the symptoms worse in genetically susceptible individuals. Sections of this work describe the immune system, the natural courses of disease for the various system-wide and organ-specific autoimmune disorders, and genetic factors and lifestyle influences associated with AD. Diagnostic concerns, conventional and alternative treatment options for AD, current research paths, and laboratory tests are also covered.

The second half of the book discusses molecular biomarkers and how they are used as diagnostic and prognostic tools for pollution monitoring. It also reviews analytical tools used to validate the biomarkers in the detection and monitoring of pollution and disease. Finally, the book delves into how novel approaches like genetic ecotoxicology, Big Data, and artificial intelligence calculate the potential consequences of environmental pollution on the ecosystems and on human health. Covers the fundamentals, types, significance, and limitations of biomarkers. Examines various types of plants, animals, and secondary metabolites in identifying and monitoring toxicity in different ecosystems and potential impacts on health. Reviews biomarker-based and bioinformatic tools in the detection and monitoring of environmental pollution and associated human health.
