Recent Advances In Upper Extremity Arthroplasty - Proceedings Of The Brussels International Upper Extremity F Schuind, K-n An, 1997-03-31
While joint replacements at the lower extremity particularly at the hip and knee are performed on a daily basis in most departments of Orthopaedics with great clinical success and long longevity of the implant the indications are much less frequent at the upper limb Basic research follows the same tendency while there are numerous basic or clinical research projects devoted to the hip or knee very scarce reports are published on upper extremity joint replacements The aims of publishing this volume

are to promote the exchange of ideas and to foster collaborative investigations among clinicians manufacturers engineers and other basic scientists involved with the problems of replacement arthroplasty in upper extremity joints from the finger to the shoulder The specific aims are 1 to summarize scientific knowledge in the area of upper extremity joint replacement 2 to discuss currently unsolved clinical problems and potential solutions based on current scientific knowledge 3 to review new prosthetic designs and 4 to explore future directions of investigation In the first section general concepts of arthroplasty and of upper extremity reconstruction are presented Ronald Linscheid presents a short history of finger joint replacement Alain Potaznik and Franz Burny discuss the problems of friction wear and biological responses after the implantation of artificial joint replacement Laurie Faro presents the European legislation for medical devices such as arthroplasties Finally Fr d ric Schuind and Franz Burny review the indications and contraindications to upper extremity arthroplasty The following sections discuss for each upper extremity joint the indications of joint replacement including the most frequent diseases the prostheses designed for that particular joint the biomechanical evaluation after prosthetic implantation and the early or long term clinical results We made a special effort to include at the end of each section some alternative procedures of reconstruction We are convinced that this unique book fills an important gap in the medical literature
