Richest Reefs Indonesia:

Richest Reefs Michael Aw, 2003 **Wildlife Ecotourism in Indonesia** Jatna Supriatna, 2025-07-01 Wildlife tourism has long been a significant and popular sector. It widespread a substantial contribution to biodiversity conservation. First it generates direct income from tourists through entrance fees, taxes and other sources. Second it provides alternative income for communities surrounding tourism areas. Third it offers a basis for environmental activists to advocate for the preservation of Indonesia's biodiversity. Fourth it supports both central and regional governments in developing sustainable and continuous areas. Fifth it creates economically based activities in conservation regions for the private sector involved in biodiversity conservation. Thus nature tourism is often regarded as sustainable development that effectively balances environmental, social and economic aspects.

Indonesia's Delimited Maritime Boundaries Vivian Louis Forbes, 2014-05-06 This book examines the delimited maritime boundaries of Indonesia with its neighbours. It features carefully drawn maps based on the geographical coordinates of the defined maritime boundaries, the reproduction of a complete set of the primary documents with direct relation to the boundaries and a comprehensive narrative on the geography and the historical development of the archipelagic State. Indonesia has an immense maritime domain that encompasses much of the sea between Australia and the Asian mainland. In addition, Indonesia is itself made up largely of water in excess of 17 000 islands. Indonesia's archipelagic and territorial waters together form about three fifths of the country's sovereign territory. This book offers readers clear, accessible information on the maritime boundaries of the world's largest archipelagic state.

The Indonesian Seas Large Marine Ecosystem Transboundary Diagnostic Analysis FAO, 2024-09-03 The Indonesian Seas Large Marine Ecosystem is a region shared by Indonesia (98 percent) and north coast of Timor-Leste (2 percent). Characterized by warm surface temperature and the Indonesian Throughflow (ITF) that contributes to climate regulation, the region is a hub of mega biodiversity with unique habitats and ecosystems that offer high fisheries productivities and various other valuable ecosystem goods and services. The region has been instrumental to ensure nutrition, livelihood and coastal communities wellbeing. Valuable ecosystem goods and services that the region has to offer have been exploited by various resource users. The ecosystem services valuation carried out for the ISLME in 2020 estimated the total gross production value (GVP) at more than USD 20 billion annually, with the largest contributions from fisheries and aquaculture. The best known use of marine ecosystem services and marine tourism approximately 10 percent. A 2018 PEMSEA report showed that the Indonesian seas support more than USD 180 billion of economic activities annually and can stimulate increased growth, jobs, food security if actions are taken to protect the region's sustainability in the long term. However, growing fishing pressures, increasing human and economic activities, land conversion among others have posed as real threats to the region's vital resources. Through the FAO-GEF supported ISLME project, Indonesia and Timor-Leste formulated the Transboundary Diagnostic Analysis (TDA) in close collaboration with national scientific advisory groups (NSAGs), fisheries and

marine experts and stakeholders The TDA is an intensive scientific document with emphasis on causal chain analysis CCA leading to the identification of the five Primary Environmental Concerns PECs to the region s sustainability The five PECs are i declining productivity and sustainability of ISLME fishery and aquaculture ii degradation and loss of marine habitats iii marine and land based pollution iv decline of biodiversity and key species v climate change impacts Developed in intensive consultation with fisheries and marine experts in both countries the TDA also presents the experts recommendations useful to inform policy and decision making process The TDA serves as the basis for the formulation of the Strategic Action Programme SAP that features clear initiatives set targets timeframe and organizations in charge to achieve the targets for ISLME region sustainability *The Indonesian Seas Large Marine Ecosystem: Strategic Action Programme* FAO,2024-12-19

The Strategic Action Programme SAP highlights fisheries and marine regional and national action plans developed by Indonesia and Timor Leste fisheries authorities and national scientific advisory groups NSAGs in close consultation with wider technical stakeholders The SAP details clear initiatives for a five year implementation period to protect the rich biodiversity and unique habitats within the Indonesian Seas Large Marine Ecosystem ISLME region shared by Indonesia 98 percent and Timor Leste 2 percent Endorsed by both governments in January 2024 the SAP sets concrete timeframe targets to achieve and the actors for each initiative and with proposed risks and management strategies to guide efforts towards sustainability Formulated based on the findings of the Transboundary Diagnostic Analysis TDA a scientific document that identified the five primary environmental concerns PECs for ISLME sustainability the SAP priority action plans are designed to address the PECs through namely i maintaining sustainable fisheries ii restoring marine habitat biodiversity iii reducing marine pollution iv conserving ETP and other key marine species and v responding to impacts of climate change It also highlights the vision goals and objectives that leads to the action plans
