Companion Robots for Older Adults Sofia

Thunberg,2024-05-06 This thesis explores through a mixed methods approach what happens when companion robots are deployed in care homes for older adults by looking at different perspectives from key stakeholders Nine studies are presented with decision makers in municipalities care staff and older adults as participants and the studies have primarily been carried out in the field in care homes and activity centres where both qualitative e g observations and workshops and quantitative data surveys have been collected The thesis shows that companion robots seem to be here to stay and that they can contribute to a higher quality of life for some older adults It further presents some challenges with a certain discrepancy between what decision makers want and what staff might be able to facilitate For future research and use of companion robots it is key to evaluate each robot model and potential use case separately and develop clear routines for how they should be used and most importantly let all stakeholders be part of the process The knowledge contribution is the holistic view of how different actors affect each other when emerging robot technology is introduced in a care environment Den h r avhandlingen utforskar vad som h nder n r s llkapsrobotar inf rs p omsorgsboenden f r ldre genom att titta p perspektiv fr n olika intressenter Nio studier presenteras med kommunala beslutsfattare v rdpersonal och ldre som deltagare Studierna har i huvudsak genomf rts i f lt p s rskilda boenden och aktivitetscenter d r b de kvalitativa exempelvis observationer och workshops och kvantitativa data enk ter har samlats in Avhandlingen visar att s llkapsrobotar verkar vara h r f r att stanna och att de kan bidra till en h gre livskvalitet f r vissa ldre Den visar ven p en del utmaningar med en viss diskrepans mellan vad beslutsfattare vill inf ra och vad personalen har m jlighet att utf ra i sitt arbete F r framtida forskning och anv ndning av s llkapsrobotar r det viktigt att utv rdera varje robotmodell och varje anv ndningsomr de var f r sig och ta fram tydliga rutiner f r hur de ska anv ndas och viktigast av allt l ta alla intressenter vara en del av processen Kunskapsbidraget med avhandlingen r en helhetssyn p hur olika akt rer p verkar varandra n r ny robotteknik introduceras i en v rdmilj

Close Engagements with Artificial Companions Yorick Wilks,2010 What will it be like to admit Artificial Companions into our society How will they change our relations with each other How important will they be in the emotional and practical lives of their owners since we know that people became emotionally dependent even on simple devices like the Tamagotchi How much social life might they have in contacting each other The contributors to this book discuss the possibility and desirability of some form of long term computer Companions now being a certainty in the coming years It is a good moment to consider from a set of wide interdisciplinary perspectives both how we shall construct them technically as well as their personal philosophical and social consequences By Companions we mean conversationalists or confidants not robots but rather computer software agents whose function will be to get to know their owners over a long period Those may well be elderly or lonely and the contributions in the book focus not only on assistance via the internet contacts travel doctors etc but also on

providing company and Companionship by offering aspects of real personalization

Animals, Machines, and AI Erika Quinn,Holly Yanacek,2021-11-08 Sentient animals machines and robots abound in German literature and culture but there has been surprisingly limited scholarship on non human life forms in German studies This volume extends interdisciplinary research in emotion studies to examine non humans and the affective relationships between humans and non humans in modern German cultural history In recent years fascination with emotions developments in robotics and the burgeoning of animal studies in and beyond the academy have given rise to questions about the nature of humanity Using sources from the life sciences literature visual art poetry philosophy and photography this collection interrogates not animal or machine emotions per se but rather uses animals and machines as lenses through which to investigate human emotions and the affective entanglements between humans and non humans The COVID 19 pandemic made us more keenly aware of the importance of both animals and new technologies in our daily lives and this volume ultimately sheds light on the centrality of non humans in the human emotional world and the possibilities that relationships with non humans offer for enriching that world Watch our talk with the editors Erika Quinn and Holly Yanacek here https://youtu.be/RBMwXah_Om8
