

Abstract

The abstract is a brief summary of the paper, allowing readers to quickly review the main points and purpose of the paper.

The abstract should be between 150-250 words. Abbreviations and acronyms used in the paper should be defined in the abstract.

This paper explores four published articles that report on results from research conducted on online (Internet) and offline (non-Internet) relationships and their relationship to computer-mediated communication (CMC). The articles, however, vary in their definitions and uses of CMC. Butler and Kraut (2002) suggest that face-to-face (FtF) interactions are more effective than CMC, defined and used as "email," in creating feelings of closeness or intimacy. Other articles define CMC differently and, therefore, offer different results. This paper examines Cummings, Butler, and Kraut's (2002) research in relation to three other research articles to suggest that all forms of CMC should be studied in order to fully understand how CMC influences online and offline relationships.

Keywords: computer-mediated communication, face-to-face communication

The word "Abstract" should be centered and typed in 12 point Times New Roman. Do not indent the first line of the abstract paragraph. All other paragraphs in the paper should be indented.

Machine Intelligence A. Gomersall,2013-03-14 In 1981 Robotics Bibliography was published containing over 1 800 references on industrial robot research and development culled from the scientific literature over the previous 12 years It was felt that sensors for use with industrial robots merited a section and accordingly just over 200 papers were included It is a sign of the increased research into sensors in production engineering that this bibliography on both the contact and non contact forms has appeared less than three years after that first comprehensive collection of references appeared In a review in 1975 Professor Warnecke of IPA Stuttgart drew attention to the lack of sensors for touch and vision Since then research workers in various companies universities and national laboratories in the USA the UK Italy Germany and Japan have concentrated on improving sensor capabilities particularly utilising vision artificial intelligence and pattern recognition principles As a result many research projects are on the brink of commercial exploitation and development This bibliography brings together the documentation on that research and development highlighting the advances made in vision systems but not neglecting the development of tactile sensors of various types No bibliography can ever be comprehensive but significant contributions from research workers and production engineers from the major industrialised countries over the last 12 years have been included

Information Sources in Information Technology David Haynes,2013-02-07 The aim of each volume of this series Guides to Information Sources is to reduce the time which needs to be spent on patient searching and to recommend the best starting point and sources most likely to yield the desired information The criteria for selection provide a way into a subject to those new to the field and assists in identifying major new or possibly unexplored sources to those who already have some acquaintance with it The series attempts to achieve evaluation through a careful selection of sources and through the comments provided on those sources

Resonant Robotic Systems V. I. Babitsky,Alexander Shipilov,2012-09-22 Especially designed as self sustaining oscillating systems resonant robotic systems use the natural modes of oscillation of electromechanical modules for their movements In fact manipulator systems built on these principles demonstrate record breaking characteristics in performance The authors summarize the results and experience of research on and development of resonant robotic systems For the readers convenience a presentation of design concepts is followed by solutions to new dynamical and control problems The book is intended for designers researchers and graduate students
