Modeling Behavior in Complex Public Health Systems Christopher Keane, Christopher R. Keane, MPH, ScD, 2013-09-27 This graduate text is the first to present methods for modeling health behavior dynamics using numerous online interactive simulations downloadable programs and examples of applications to planning interventions The book examines behaviors that range from simple individual health protective actions to complex cooperative public health actions It provides a user friendly and effective method for teaching systems thinking a core competency now required by the Association of Schools of Public Health The text presents evolutionary and ecological models of health behavior which readers first explore using interactive online simulations The fundamental principles of these models are explained through the book's narrative and demonstrated through the use of simple board games The text then shows how to translate these board games into computational models using Netlogo a free user friendly software Thus no computer programming background is required Readers will learn the basics of agent based modeling of individual behavior social network behavior organizational behavior spread of disease and a variety of public health interventions Applying these methods to public health systems sample models introduce the dynamics of networks of organizations and how they can interact to protect health A unifying theme throughout is how complex individual and collective health behavior develop from simple individual health decisions or behavior repeated over time The book also includes a student's models at successive stages of learning including her early stage incorrect program which readers can themselves try to correct Students will learn to create their own models use them to conduct simulated experiments and apply these methods to planning and evaluating behavior change interventions Each chapter provides online interactive models and downloadable sample programs

Key Features Uses interactive simulation for modeling health behavior dynamics for complex public health systems Demonstrates agent based modeling of individual health behavior network behavior public health intervention effects and the spread of disease Teaches readers to create models that can improve their local needs assessments program logic modeling and program planning and evaluation Includes numerous interactive online simulations downloadable programs and examples of applications to planning interventions Facilitates systems thinking a required core competency

Game Theory and Behavior Jeffrey Carpenter, Andrea Robbett, 2022-12-06 An introduction to game theory that offers not only theoretical tools but also the intuition and behavioral insights to apply these tools to real world situations This introductory text on game theory provides students with both the theoretical tools to analyze situations through the logic of game theory and the intuition and behavioral insights to apply these tools to real world situations It is unique among game theory texts in offering a clear formal introduction to standard game theory while incorporating evidence from experimental data and introducing recent behavioral models Students will not only learn about incentives how to represent situations as games and what agents should do in these situations but they will also be presented with evidence that either

confirms the theoretical assumptions or suggests a way in which the theory might be updated

Features Each chapter begins with a motivating example that can be run as an experiment and ends with a discussion of the behavior in the example

Parts I IV cover the fundamental nuts and bolts of any introductory game theory course including the theory of games simple games with simultaneous decision making by players sequential move games and incomplete information in simultaneous and sequential move games

Parts V VII apply the tools developed in previous sections to bargaining cooperative game theory market design social dilemmas and social choice and voting

Part VIII offers a more in depth discussion of behavioral game theory models including evolutionary and psychological game theory

Instructor resources include solutions to end of chapter exercises worksheets for running each chapter's experimental games using pencil and paper and the oTree codes for running the games online
