Regulation of Ovarian and Testicular Function Virendra B. Mahesh, Dharam S. Dhindsa, Everett Anderson, Satya P. Kalra, 2012-12-06 Rapid advances have taken place in various aspects of reproductive biology during the last decade. These advances have centered around several organ systems that comprise the reproductive system and encompass molecular events and structure-function relationships. It becomes important to review these advances in knowledge at periodic intervals with respect to feedback systems and regulatory loops that control reproductive processes in vivo. Towards this end a workshop entitled *Functional Correlates of Hormone Receptors in Reproduction* sponsored by the National Institute of Child Health and Human Development and the Reproductive Biology Study Section of the Division of Research Grants, National Institutes of Health, was held in October 1980. The proceedings of the workshop were published by Elsevier Biomedical, New York. This workshop was followed by two workshops sponsored by the Reproductive Biology Study Section of the Division of Research Grants, National Institutes of Health, entitled *Role of Peptides and Proteins in Control of Reproduction* in February 1982 and published by Elsevier Biomedical, and *Molecular and Cellular Aspects of Reproduction* in October 1985 and published by Plenum Press. It was therefore timely to review the current state of knowledge regarding the regulation of ovarian and testicular function by bringing together scientists working in separate and discrete aspects of reproduction to review the functional implications of their research on the regulation of function within the same tissue and also in relationship to feedback systems and regulatory loops with other tissues.

National Library of Medicine Current Catalog National Library of Medicine (U.S.), *LHRH and Its Analogs* B.H. Vickery, J.J. Nestor, E.S. Hafez, 2012-12-06. A CORBIN Investigation on LHRH and its analogs have just completed their first decade. We have witnessed a veritable explosion of chemical, physiologic and pharmacologic data on this hypothalamic peptide and the approximately 1500 agonist and antagonist analogs that have been synthesized. In order to track this expanding field I was asked to organize an international symposium on basic and clinical aspects of LHRH analogs as part of the Reproductive Health Care CDS Symposium held in Maui, Hawaii in October 1982. This meeting brought together a number of the leading investigators in the field. Much new state-of-the-art information was presented which I and my colleagues felt deserved a wider audience. Drs. Vickery, Nestor and Hafez consented to undertake this task. Upon review of the literature it was apparent that there was no recent text which fully covered the breadth of developments in the field. Accordingly, the editors decided to use the symposium as a nucleus on which to build a singular, comprehensive state-of-the-art analysis of this rapidly growing discipline and the application of such knowledge to reproductive medicine. As exemplified by the various areas of expertise provided by the individual contributors, it becomes obvious that the scope of the subject matter while relating solely to a well-defined

chemical class LHRH analogs and a circumscribed physiologic and pharmacologic entity reproduction has expanded enormously
