Quaternary Carbonate and Evaporite Sedimentary Facies and Their Ancient Analogues Christopher G. St. C. Kendall, Abdulrahman S. Alsharhan, 2011-02-18 This book is part of the International Association of Sedimentologists IAS Special Publications The Special Publications from the IAS are a set of thematic volumes edited by specialists on subjects of central interest to sedimentologists Papers are reviewed and printed to the same high standards as those published in the journal Sedimentology and several of these volumes have become standard works of reference This volume commemorates the eclectic research of Douglas James Shearman into evaporites which was initiated by his studies of the prograding UAE coastal sabkhas or salt flats that incorporate evaporite minerals which displace and replace earlier carbonate sediments His subsequent proselytization of the study of ancient evaporites in sedimentary sections all over the world led to fundamental advances in our understanding of arid zone carbonate sedimentology The papers presented here are based on presentations made in Abu Dhabi UAE 12-14th October 2004 and 7th-8th November 2006 They provide a retrospective from the 1960s and 70s of Holocene evaporites and carbonates recapturing Shearman's contribution by revisiting the Holocene coastal evaporite and carbonate sediments of the Arabian Persian Gulf from Abu Dhabi Qatar and Oman The first set of papers considers these sediments from the perspective of their coastal geomorphology sedimentary character and their geochemistry Later papers examine the significance of these settings in the ancient geological section world wide including examples from the Mesozoic Cenozoic of the Moroccan Atlantic margin and the Upper Jurassic Arab Formation of the Arabian Gulf

series of newest research studies that are relevant to Middle East Mediterranean region and Africa Marine Permian of England D.B. Smith, 2013-03-07 This book is concerned almost wholly with a diverse suite of carbonate rocks that were formed near the margins of shallow tropical seas during the last 5 7 million years of the Permian period 300 251 Ma These unique rocks collectively known as the Magnesian Limestone have been studied for more than 160 years and the names of some of the early workers Geinitz Murchison Phillips Sedgwick Sorby would grace any geological hall of fame Despite this formidable assault and the efforts of a host of later workers the Magnesian Limestone still retains many of its secrets Permian marine rocks crop out on both sides of the Pennines but those of the Zechstein Sea to the east are by far the thicker and more varied and in these lie all but one of the sites selected for special protection Detailed accounts of the rocks in 26 such sites form about half of this book and the normal and special features of these sites are compared contrasted and placed in their mutual context in the remainder of the book The sites were selected according to a range of criteria including uniqueness representativeness historical importance and suitability for teaching purposes and research most are inland quarries but a few are in the unrivalled coastal cliffs of classical County Durham where the main difficulty lies in deciding what not to select **Exploration for Carbonate Petroleum Reservoirs** Centre de recherches de Boussens, 1982 This book is meant for professionals in the petroleum and mining industry for students and for academic researchers interested in carbonate rocks For those individuals who lack a background in carbonates it is suggested that they acquaint themselves with carbonate particles processes of carbonate sedimentation cementation and the classification of carbonate rocks which should provide them with sufficient knowledge to understand the level of treatment presented in this book
