[Physical Activity and Health](#), 1996

[Physical Activity and Health](#) Audrey F. Manley, 1996-11 This report is the first report of the Surgeon General on physical activity and health. For more than a century the Surgeon General of the Public Health Service has focused the nation's attention on important public health issues. Reports from Surgeons General on the adverse health consequences of smoking triggered nationwide efforts to prevent tobacco use. Reports on nutrition violence and HIV/AIDS to name but a few have heightened America's awareness of important public health issues and have spawned major public health initiatives. This new report which is a comprehensive review of the available scientific evidence about the relationship between physical activity and health status follows in this notable tradition. Scientists and doctors have known for years that substantial benefits can be gained from regular physical activity. The expanding and strengthening evidence on the relationship between physical activity and health necessitates the focus this report brings to this important public health challenge. Although the science of physical activity is a complex and still developing field we have today strong evidence to indicate that regular physical activity will provide clear and substantial health gains. In this sense the report is more than a summary of the science it is a national call to action.
