British Special Projects Bill Rose,2021-01-28 An insight into British ambitious and often unrealistic aspirations to stay at the forefront of advanced technology such as the development of the atomic powered warplane The world s first military flying wing was a British design that saw operational service during the First World War A manned rocket ship launched from a converted V bomber was proposed capable of reaching the edge of space Beautifully illustrated with many rare and unpublished photographs Of interest to aviation and military historians modellers gamers and flight simulator enthusiasts Flying wings deltas and tailless aircraft continue to generate enormous interest within the aviation community and many of the older designs still look surprisingly futuristic British Special Projects Flying Wings Deltas and Tailless Designs examines the lesser known and frequently secret British projects undertaken for research or military purposes during the last century and also covers those aircraft that were built and in some cases entered service The first commercially successful British flying wing biplane designed by John Dunne undertook limited military reconnaissance duties during the First World War Various flying wings followed but the German development of the delta would prove massively influential with post war British aerodynamicists immediately recognising the potential for a new generation of high performance designs Parallel research into advanced flying wings would produce plans for the superb looking Barnes Wallace supersonic swing wing bomber although his design was too far ahead of its time to progress any further There were also dead end projects for bombers powered by atomic propulsion vertical take off concepts and over ambitious ideas for British spacecraft that utilised delta and blended wing bodies but were too technically challenging and costly to develop further Nevertheless many of these designs that stemmed from the simple flying wing remain influential today **Secret Projects of the Luftwaffe - Vol 1 -**

Jet Fighters 1939 -1945 Dan Sharp,2020-09-22 Germany's air ministry was quick to grasp the potential of the jet engine as early as 1938 and by 1939 several German aircraft manufacturers were already working on fighter designs that would utilize this new form of propulsion. Rocket engines too were seen as the way of the future and companies were commissioned to design fighters around them. As the Second World War began the urgent need to bring these advanced new types into production saw a host of innovative aircraft designs being produced which would eventually result in Messerschmitt's Me 262 jet fighter and the Me 163 rocket propelled interceptor. And as the war progressed efforts were increasingly made to find better ways of utilizing jet rocket and latterly ramjet engines in fighter aircraft. Aviation companies from across Germany set their finest minds to the task and produced some of the most radical aircraft designs the world had ever seen. They proposed rotating wing ramjet fighters, arrowhead shaped rammers, rocket firing bat winged gun platforms, sleek speed machines, tailless flying wings, tiny mini fighters and a host of others ranging from deadly looking advanced fighters to downright dangerous vertical launch interceptors. *Secret Projects of the Luftwaffe Volume 1 Jet Fighters 1939 1945* by Dan Sharp based on original research using German wartime documents offers the most complete and authoritative account yet of these fascinating designs through previously unseen photographs, illustrations and period documentation from archives around the world.

Heinkel He 162 Dan Sharp,2020-04-19 The history of the Luftwaffe's last minute single jet fighter the Heinkel He 162 is neither standard nor straightforward. Originally conceived as the jet fighter anyone could fly into combat the He 162 was designed and built in under five months, an astonishing and unparalleled feat of engineering. But what emerged was not a simple jet fighter but a tricky widow maker which killed far more of its own pilots than it ever did those of the enemy. Going back to the original wartime documentation, author Dan Sharp examines the story of this remarkable aircraft in detail. *The*

Luftwaffe's Secret WWII Missions Dmitry Degtev, Dmitry Zubov,2020-12-28 Full of mystery and intrigue surrounding the Abwehr and the Luftwaffe secret missions supporting the insertion and less frequent extraction of agents. Aviation News There are many vivid episodes in the operational service of the Luftwaffe's special and secret units which engaged in the delivery of agents and saboteurs in the rear of the enemy throughout the Second World War, not just on the Eastern Front but across Asia and Europe. The activities of the pilots and crews of these squadrons, even in the Luftwaffe itself, were closed and secret. Information on the operations and missions of these units was known only to a limited number of people. It was common practice for the crew of one aircraft in these units to know nothing about the assignments of their fellow airmen. The area of activity of such units and aircraft covered the whole of Europe, North Africa, the Arctic circle, the Urals, the Caucasus and Central Asia, including Iran, Iraq and Afghanistan. The Luftwaffe not only flew to these remote regions but also created secret bases for their aircraft. Drawn from German and Russian sources, much of the latter only recently declassified, the authors expose for the very first time the Luftwaffe's secret operations and reveal the fate of many of the pilots, agents and saboteurs in a story as breathtakingly dramatic as any blockbuster novel. A most interesting account of the special Luftwaffe

units that flew agents into enemy territory during WWII What may surprise many readers is the extent of these operations that stretched deep into the Soviet Union and also into the Middle East and Afghanistan Firetrench Combat in the Stratosphere Steven Taylor,2024-05-31 The first book devoted exclusively to exploring the development and use of aircraft designed specifically for high altitude operations in World War II In the summer of 1940 a new German aircraft began appearing in the skies over the British Isles Unlike the rest of the Luftwaffe s fleet in the Battle of Britain these aircraft were flying at a height of 40 000 feet and higher way beyond the reach of the RAF s defending fighters These virtually untouchable intruders were examples of the Junkers Ju 86P The world s first operational combat aeroplane equipped with a pressurized cabin they were able to reach a maximum altitude of 42 000 feet The Ju 86P s introduction ushered in a new era of aerial warfare where combat would take place at previously unimaginable heights The Ju 86P was just one of many high altitude aircraft projects developed by both the Axis and Allied powers during the Second World War Others included the Vickers Wellington Mk VI Vickers Windsor Boeing B 29 Superfortress Junkers Ju 388 Heinkel He 274 and Henschel Hs 130 With pressurized cabins such aircraft offered obvious tactical advantages bombers and reconnaissance aircraft could operate safely above the maximum ceiling of the opposing side s fighters prompting intense development especially by the British and Germans of pressurized interceptors to meet the threat they posed **Combat in the Stratosphere** is the first book devoted exclusively to exploring the fascinating story of the development and operational history of aircraft designed specifically for high altitude operations during the Second World War But this is not a book solely about the machines themselves It also focuses on the men who flew these revolutionary aircraft both in the testing phase and in combat and the physical challenges these courageous airmen faced as they pushed themselves to the very edge of physical endurance in this desperate race to reach ever higher altitudes Drawing on a wide range of sources including air combat reports British Cabinet files and Air Ministry documents as well as first hand accounts of aeronautical engineers and the pilots who flew these aircraft **Combat in the Stratosphere** reveals the full story of this largely overlooked aspect of Second World War air warfare high above the skies of Europe North Africa the Soviet Union and Japan **Operation Lusty** Graham M. Simons,2016-07-31 A fascinating

overview of the Allies post WWII program to gain access to advanced Nazi war machines and the technology they ultimately recovered Prior to the Allied D Day assault on Normandy France rumors had already been circulating that high tech Nazi super weapons wunderwaffe had reached or were near completion At the war s end a mad scramble ensued to discover the enemy s secrets fueled in large part by a US desire to regain its technological edge and to keep these weapons out of Soviet hands **Operation Lusty** LUftwaffe Secret TechnologY was in full swing In **Operation Lusty** aviation historian Graham M Simons delivers a comprehensive and detailed history of the program while cataloging the advanced war equipment that was ultimately discovered from U boats carriers and battleships to radar equipment and operating systems to fighters bombers rockets and other V weapons With access to previously unreleased documentation and wide ranging archival materials

Simons distinguishes what was fact in the Nazi arsenal from what was pure fantasy dreamed up by Joseph Goebbels's powerful propaganda machine. Operation Lusty sheds new light on the furious race for postwar technological superiority and offers an insider's look at the full spectrum of military spoils that were gained. **Nazi Moonbase** Graeme Davis, 2016-04-21

In the dying days of World War II, Nazi Germany spent increasingly large amounts of its dwindling manufacturing capability on the construction of a small fleet of flying saucers capable of travel beyond the atmosphere. While these saucers were too few in number to affect the eventual outcome of the war, they did allow for a small but fanatical Nazi group to escape Germany first to Antarctica and then on to the moon. For the first time, the history of the Nazi space program has been revealed, with a focus on the design, construction, and layout of the moonbase. Using detailed maps, the entire moonbase is reconstructed, noting the locations of various important features such as weapon emplacements, the Vril generator, the air recyclers, and water extractors. The book also covers the various attempts by the allies to overcome this last Nazi stronghold through both subterfuge and outright battle. Luftwaffe Dan Sharp (Journalist), 2019 *German Air-dropped Weapons to 1945* Wolfgang Fleischer, 2004 8 1/2 x 11 3/4 b/w photos. Aircraft armament is very much an under-published subject area in which there is a growing interest. This is particularly true of air-dropped ammunition. This subject involves more than just bombs, rockets, and a range of other weapons; also come into this category. Combine this subject area with the Luftwaffe in World War II, and you will have a book which is of great interest to historians and modelers alike and will also be of some practical value for artificers and personnel dealing with weapons systems in today's air forces. This book traces the development of German air-dropped ammunition from the crude aeronautical artillery of World War I to the advanced remote control bombs of World War II. Major topics include demolition bombs, incendiary bombs, special dropped ammunition, sea-dropping ammunition, and dropping containers. A comprehensive illustrated listing catalogues information on 100 different bombs, 22 canisters, and 50 of the most important bomb fuses. This is an unusual and innovative aviation title which will appeal to a wide readership in many areas of the aviation hobby.
