Lustron Homes The History Of A Postwar Prefabricated Housing Experiment:

The Lustron Home Thomas T. Fetters, 2006-01-30 Advertised as a new standard for living the Lustron Home was introduced in 1948 in response to the urgent need for housing for veterans returning from World War II and their rapidly growing families These enameled steel prefabricated houses became very popular and were heavily promoted from 1948 to 1950 Approximately 2 500 went up all over the United States and even South America This work chronicles the history of the Lustron Corporation how it got started and why it failed The architectural differences between the six basic models of the Lustron Home and how they could be built in as little as two days are fully described Also included is a listing that documents the location model color and various other particulars of the roughly 2 500 houses completed *The Lustron Home* Thomas T. which have become embedded within it over the last century analyzing the historical lineages heroes and villains that helped define the complex material ecologies we see within the envelope today While the fa ade is one of the most thoroughly theorized elements of architecture it is also one of the most questioned since the end of the 19th century Within the discipline of architecture the traditional understanding of the fa ade focuses primarily on semiotic and compositional operations such as proportional laws and linguistic codes which are deployed on the building s surface In contrast to this our material and environmental theory of the envelope proposes that the exponential development of building technologies since the mid 19th century coupled with new techniques of management and regulation have diminished the compositional and ornamental capacities of the envelope in favor of material quantitative and technical performances Rather than producing a stylistic analysis of the fa ade we investigate the historical lineages of the performances components assembly types and material entanglements that constitute the contemporary building envelope **CRM**,2007 *The Interior Architecture Theory Reader* Gregory Marinic,2018-01-17 The Interior Architecture Theory Reader presents a global compilation that collectively and specifically defines interior architecture Diverse views and comparative resources for interior architecture students educators scholars and practitioners are needed to develop a proper canon for this young discipline As a theoretical survey of interior architecture the book examines theory history and production to embrace a full range of interior identities in architecture interior design digital fabrication and spatial installation Authored by leading educators theorists and practitioners fifty chapters refine and expand the discourse surrounding interior architecture Traces of Old Sharpsville Ralph C. Mehler,2024-04-05 Though just a small town Sharpsville has had an outsized influence on the American iron industry This book tells that story plus many more the canal that gave the town its start its railroads the personalities who lived here the churches and clubs its ethnic heritage sports heroes long gone landmarks and institutions and the traditions that make Sharpsville unique Events whether of local note or part of national trends are here recounted More than just an account of town lore this is a thoroughly researched book that gives the reader an insight into life here in years past from a variety of perspectives Anyone who lives in the Shenango Valley will find interest in these pages as will someone who has since moved away but whose heart still remains here The short articles contained within this book are grouped into themed chapters With many not seen before photos it makes for an enjoyable and readable account of this little burg in times past

Historic Residential Suburbs David L. Ames,Linda Flint McClelland,2002 **A Better Way to Zone** Donald L. Elliott,2012-09-26 Nearly all large American cities rely on zoning to regulate land use According to Donald L Elliott however zoning often discourages the very development that bigger cities need and want In fact Elliott thinks that zoning has become so complex that it is often dysfunctional and in desperate need of an overhaul A Better Way to Zone explains precisely what has gone wrong and how it can be fixed A Better Way to Zone explores the constitutional and legal framework of zoning its evolution over the course of the twentieth century the reasons behind major reform efforts of the past and the adverse

impacts of most current city zoning systems To unravel what has gone wrong Elliott identifies several assumptions behind early zoning that no longer hold true four new land use drivers that have emerged since zoning began and basic elements of good urban governance that are violated by prevailing forms of zoning With insight and clarity Elliott then identifies ten sound principles for change that would avoid these mistakes produce more livable cities and make zoning simpler to understand and use He also proposes five practical steps to get started on the road to zoning reform While recent discussion of zoning has focused on how cities should look A Better Way to Zone does not follow that trend Although New Urbanist tools form based zoning and the SmartCode are making headlines both within and outside the planning profession Elliott believes that each has limitations as a general approach to big city zoning While all three trends include innovations that the profession badly needs they are sometimes misapplied to situations where they do not work well In contrast A Better Way to Zone provides a vision of the future of zoning that is not tied to a particular picture of how cities should look but is instead based on how cities should operate

What Is Cosmopolitical Design? Design, Nature and the Built Environment Albena Yaneva, Alejandro Zaera-Polo, 2017-05-15 The scale of ecological crises made us realize that every kind of politics has always been cosmopolitics politics of a cosmos Cosmos embraces everything including the multifarious natural and material entities that make humans act The book examines cosmopolitics in its relation to design practice Abandoning the modernist idea of nature as being external to the human experience a nature that can be mastered by engineers and scientists from outside the cosmopolitical thinking offers designers to embark in an active process of manipulating and reworking nature from within To engage in cosmopolitics this book argues means to redesign create instigate and compose every single feature of our common experience In the light of this new understanding of nature we set the questions What is the role of design if nature is no longer salient enough to provide a background for human activities How can we foster designers own force and make present what causes designers to think feel and act How do designers make explicit the connection of humans to a variety of entities with different ontology rivers species particles materials and forces How do they redefine political order by bringing together stars prions and people In effect how should we understand design practice in its relation to the material and the living world In this volume anthropologists science studies scholars political scientists and sociologists rethink together the meaning of cosmopolitics for design At the same time designers architects and artists engage with the cosmopolitical question in trying to imagine the future of architectural and urban design The book contains original empirical chapters and a number of revealing interviews with artists and designers whose practices set examples of cosmopolitically correct design

Manufacturing a Socialist Modernity Kimberly Elman Zarecor, 2011-04-10 Eastern European prefabricated housing blocks are often vilified as the visible manifestations of everything that was wrong with state socialism For many inside and outside the region the uniformity of these buildings became symbols of the dullness and drudgery of everyday life Manufacturing a Socialist Modernity complicates this common perception Analyzing the cultural intellectual and professional debates surrounding the construction of mass housing in early postwar Czechoslovakia Zarecor shows that these housing blocks served an essential function in the planned economy and reflected an interwar aesthetic derived from constructivism

and functionalism that carried forward into the 1950s With a focus on prefabricated and standardized housing built from 1945 to 1960 Zarecor offers broad and innovative insights into the country's transition from capitalism to state socialism She demonstrates that during this shift architects and engineers consistently strove to meet the needs of Czechs and Slovaks despite challenging economic conditions a lack of material resources and manufacturing and technological limitations In the process architects were asked to put aside their individual creative aspirations and transform themselves into technicians and industrial producers *Manufacturing a Socialist Modernity* is the first comprehensive history of architectural practice and the emergence of prefabricated housing in the Eastern Bloc Through discussions of individual architects and projects as well as building typologies professional associations and institutional organization it opens a rare window into the cultural and economic life of Eastern Europe during the early postwar period **Future** Lawrence R. Samuel, 2009-12-03 The history of our attitudes toward the possibilities of tomorrow A fascinating trek through American future visions from the 1920s to the present Lori C Walters Ph D University of Central Florida The future is not a fixed idea but a highly variable one that reflects the values of those who are imagining it By studying the ways that visionaries imagined the future particularly that of America in the past century much can be learned about the cultural dynamics of the times In this social history Lawrence R Samuel examines the future visions of intellectuals artists scientists businesspeople and others to tell a chronological story about the history of the future in the past century He defines six separate eras of future narratives from 1920 to the present day and argues that the milestones reached during these years especially related to air and space travel atomic and nuclear weapons the women's and civil rights movements and the advent of biological and genetic engineering sparked the possibilities of tomorrow in the public's imagination and helped make the twentieth century the first century to be significantly more about the future than the past The idea of the future grew both in volume and importance as it rode the technological wave into the new millennium and the author tracks the process by which most people to some degree have now become futurists as the need to anticipate tomorrow accelerates *Choice* ,2002
