Analysis of Machining and Machine Tools Steven Liang, Albert J. Shih, 2015-12-29 This book provides readers with the fundamental analytical and quantitative knowledge of machining process planning and optimization based on advanced and practical understanding of machinery mechanics accuracy dynamics monitoring techniques and control strategies that they need to understanding machining and machine tools It is written for first year graduate students in mechanical engineering and is also appropriate for use as a reference book by practicing engineers It covers topics such as single and multiple point cutting processes grinding processes machine tool components accuracy and metrology shear stress in cutting cutting temperature and thermal analysis and machine tool chatter The second section of the book is devoted to Non Traditional Machining where readers can find chapters on electrical discharge machining electrochemical machining laser and electron beam machining and biomedical machining Examples of realistic problems that engineers are likely to face in the field are included along with solutions and explanations that foster a didactic learning experience

Analysis of Material Removal Processes Warren R. DeVries, 2012-12-06 Metal removal processes cutting and grinding in this book are an integral part of a large number of manufacturing systems either as the primary manufacturing process or as an important part of preparing the tooling for other manufacturing processes In recent years industry and educational institutions have concentrated on the metal removal system perhaps at the expense of the process This book concentrates on metal removal processes particularly on the modeling aspects that can either give a direct answer or suggest the general requirements as to how to control improve or change a metal removal process This modeling knowledge is more important with automated computer controlled systems than it has ever been before because quantitative knowledge is needed to design and operate these systems This senior undergraduate graduate textbook is aimed at providing the quantitative knowledge often times at an elementary level for handling the technological aspects of setting up and operating a metal removal process and interpreting the experience of planning operating and improving a metal removal process based on rule of thumb approaches
